

Live Session on Claude Code with Antigravity - Part 1

08:52 - 08:57

Kartik Outskill: Hello, hello, hello, hello, hello, people! Good evening, good afternoon, good morning.

08:58 - 09:01

Kartik Outskill: Hope you all are doing good!

09:02 - 09:07

Kartik Outskill: Can I have good in the chat, if you all are doing good? Can I have good in the chat?

09:12 - 09:18

Kartik Outskill: Amazing, amazing, great, great to see that. Firstly.

09:18 - 09:34

Kartik Outskill: I welcome you all to AI Masterclasses and Sprints by Outskill. This is one space that we are trying to develop for all of our learners, where they can come in and learn something new, something amazing, something extra.

09:34 - 09:37

Kartik Outskill: And in that series.

09:37 - 09:59

Kartik Outskill: We are having a masterclass on plot code with anti-gravity, and today's session is Introduction to Clot Code with Antigravity. We are going to start with seeing how it can... how we can use plot code with anti-gravity, and it is going to be an amazing session. Can I have

10:00 - 10:04

Kartik Outskill: Excited in the chat, if you all are excited.

10:05 - 10:08

Kartik Outskill: Can I have excited in the chat?

10:16 - 10:25

Kartik Outskill: Amazing, amazing. Great, great to see that. Great to see how my chat is flowing. This is, this is so good. This is amazing.

10:26 - 10:39

Kartik Outskill: Okay, so, those of... those of you who do not know me, I am Karthik, I'm the program manager at Outskill. I run these programs, and since I have talked about myself now.

10:39 - 10:46

Kartik Outskill: Are you all excited to meet your mentor for today's

10:46 - 10:55

Kartik Outskill: plot code with anti-gravity session, can I have yes in the chat so that I can call him in?

10:58 - 10:59

Kartik Outskill: Great.

10:59 - 11:04

Kartik Outskill: It is so... it is so good to see how the chat is flowing, it is so good to see, folks.

11:04 - 11:22

Kartik Outskill: make sure to keep it flowing like this during the whole session, keep the energy intact, and on this, I'm going to call in KVS Dilip, you all know him, you all have met him, you all have seen him. He's AI educator, he is helping individuals like you, like me.

11:22 - 11:30

Kartik Outskill: building AI solutions, and he's head of Gen AI Education at Outskill. Hi, Adela, good evening, how are you?

11:30 - 11:33

Dileep Karri: I'm good, I'm good, and a very good evening, and let's get into it.

11:33 - 11:34

Kartik Outskill: Yes.

11:34 - 11:46

Dileep Karri: Okay, so folks, what we are going to do is, it is by purpose that we are going to keep the chat to hosts and panelists, because you are a mixed cohort. Some people don't like to be

11:46 - 12:06

Dileep Karri: disturb some people, like, conversations. We cannot do everything for everyone. So we are going to keep it only to hosts and panelists, and these sessions, right, are going to be different from what you have experienced before, okay? So these sessions are going to be different. So today's session is going to be an intermediate session.

12:06 - 12:10

Dileep Karri: What it means is, it is not going to be a...

12:10 - 12:30

Dileep Karri: pace session overall. It is going to be an intermediate session, okay? So that means there will be some things which you'll be able to understand clearly, but there will be some things that you might miss out, okay? I will try to keep it as palatable as possible, but understand that these prints are meant for the problem that

12:30 - 12:40

Dileep Karri: While we try to cater to everybody in our core programs, there has always been this additional feedback from the community of doing some little bit of advanced stuff.

12:40 - 12:53

Dileep Karri: Overall, okay? So, for that reason, we are doing the sprints where we go into the little bit advanced topics without any fear of getting people left behind.

12:54 - 13:14

Dileep Karri: All right? So, that is going to be there. I am not going to use any slides today or tomorrow, okay? There is not going to be any slides, it'll be whiteboard and some demos, okay? Because this is going to be building stuff, there is no slides or a storyline that I can convey. So, therefore, there is going to be no slides, there is going to be,

13:15 - 13:16

Dileep Karri: no...

13:16 - 13:30

Dileep Karri: you know, slow, fancy stuff, we will get right into it, okay? So, towards the end of today, Karthik will tell you where you will get the recording. So, Karthik, please make a note, tell people where they can, do the,

13:31 - 13:44

Dileep Karri: get the recordings, etc. Please ensure that you're doing it towards the end, okay? And other thing is, on the questions and doubts, we will not be able to cater to all the doubts overall.

13:44 - 14:06

Dileep Karri: Okay? So, we will take a few questions, we will take only the top few questions. While I'm telling, I will definitely try to answer the major doubts you might have, but don't expect all your questions to be answered. This is a sprint. We will give you the structure, we will teach you what is required, and then we... you... the rest of it is up to you to plan, figure out, there is no hand-holding.

14:06 - 14:11

Dileep Karri: Ever. Okay? So, I hope I'm clear. No hand-holding, no,

14:12 - 14:17

Dileep Karri: Don't expect every question of yours to be answered. We will get right into it.

14:22 - 14:40

Dileep Karri: Okay, so before I do anything, right, I wanted to share a kind of scaffolding for today's session, okay, kind of scaffolding in the sense about something which happened in the last week, which I would want to kind of convey to everybody, okay?

14:40 - 14:45

Dileep Karri: Folks, while I keep the chat open to,

14:45 - 14:51

Dileep Karri: hosts and panelists, don't expect me to acknowledge every question, okay? I'll keep an eye on it, but...

14:51 - 15:08

Dileep Karri: I'm not going to address any of the questions, so I will go at my pace. When I ask a question, that is when I look at the chat, so any side questions, anything else, etc, I will not be

able to take up, okay? So there was this moment where Claude Mythos dropped, and this was the...

15:08 - 15:17

Dileep Karri: So this LinkedIn post was a rumination of around 4 days, okay? Around 4 or 5 days over the weekend, I kept thinking about this.

15:17 - 15:34

Dileep Karri: And, you know, why it felt was, Nicholas Karilny, he was one of the best AI security researchers alive, found... said that Mythos found bugs and days that he couldn't find in his entire career. Especially, there was this thing called OpenBSD, which is supposed to be the most

15:34 - 15:43

Dileep Karri: You know, kind of secure... it is a very more secure operating system used in a lot of defense applications.

15:43 - 16:01

Dileep Karri: Claude Mythos could find a bug there which has been undetected for many years. That was the extent Claude Mythos could do stuff, right? So I was kind of thinking, what is my plan B if AI replaces me? What if an AI Dilip could come in and say that, hey.

16:01 - 16:12

Dileep Karri: You know what, Dilip? I am a better teacher, I have analyzed everything. Recently, I saw this video of people wearing headcams and doing their work so that robots could copy them.

16:12 - 16:15

Dileep Karri: Okay, there was a Indian,

16:15 - 16:38

Dileep Karri: company which is giving training data to Chinese companies by people who are wearing headsets and working on, you know, this thing, right? So, that's exactly has been my fear, and then I kind of found 3 things which would always help, okay? This is, again, my thought. Again, it's up to you to decide whether

16:38 - 16:41

Dileep Karri: how you want to do it or not, it is my thoughts.

16:41 - 16:43

Dileep Karri: One thing is taste, okay?

16:43 - 16:55

Dileep Karri: AI can give you 100 options in 10 seconds, but taste is where you try to figure out how to do it, and it's an accumulated judgment. It is not something that people can figure out.

16:55 - 17:01

Dileep Karri: Second is systems thinking, knowing what matters, right? So you are...

17:01 - 17:14

Dileep Karri: Figuring out what problem is worth solving in the very first place, and then craftsmanship, right? It is like, you go so deep, and you become such a great craftsman that AI cannot keep up with you.

17:14 - 17:34

Dileep Karri: All right? So, again, this... I don't know if I'm right, this is genuinely what I believe, okay? But I cannot sit still and, you know, if you're sitting still saying that, okay, AI is going to take over, that's it, let me just give up, that is a guaranteed way to lose. So, I very strongly believe that this is the way

17:34 - 17:44

Dileep Karri: that you have taste, systems thinking, and craftsmanship that is going to be important. So, in today's and tomorrow's sprint, okay, in the masterclass.

17:44 - 17:49

Dileep Karri: I will be focusing more on the taste, I will be focusing more on the judgment,

17:50 - 18:04

Dileep Karri: Little bit on the craftsmanship, so that... that is what we are going to do. So I'm not going to go into detail, so don't expect me to say, hey, go here, click this button, go here, click that button. That is something that I would like you to figure out by yourselves.

18:04 - 18:09

Dileep Karri: Okay? You have now gone through a good amount of training, UI, UX,

18:09 - 18:28

Dileep Karri: where the button is, what buttons to click is something you will have to figure out. What I will try to go more deeper is into the taste, the judgment, what is good, what is not. How

do we convey our taste to the AI effectively, and how do we build stuff? That is what my focus is going to be.

18:29 - 18:38

Dileep Karri: So, let's get started, so that we set the... we have set the context. We will now, try to get into it.

18:48 - 18:50

Dileep Karri: Alright, so...

18:52 - 18:58

Dileep Karri: Yeah, so what we're going to do is, we are going, like, while the class says Claude Code.

18:58 - 19:00

Dileep Karri: plus anti-gravity.

19:03 - 19:26

Dileep Karri: while we will say Claude Code plus anti-gravity, I am going to go deeper into Claude Code, and anti-gravity is something I'm going to use as a GUI. I'm not going to go and build applications inside anti-gravity. I'm going to tell you why I would use anti-gravity, and maybe in a future sprint, we will go into anti-gravity

19:26 - 19:36

Dileep Karri: in detail and do a standalone there, but today, my focus is more on cloud code, because it is the numero uno currently.

19:37 - 19:46

Dileep Karri: In a way, right? People have, like, if you're following the news, Anthropic hit \$1.30 billion.

19:46 - 19:56

Dileep Karri: Folks, am I echoing? Can somebody tell me if it's okay, not okay? I'm seeing some echo things in the chat. My next suit seems to be good.

19:58 - 20:04

Dileep Karri: Yeah, I think it is for others, for few people who is echoing, there is a problem on your end.

20:06 - 20:14

Dileep Karri: Okay, so the Anthropic has hit the \$1.30 billion open rate, which is almost very close to OpenAI.

20:16 - 20:24

Dileep Karri: Okay? Anthropic is \$30 billion, which is very close to what OpenAI has been doing, so they have caught up.

20:24 - 20:31

Dileep Karri: They are very close to catching up, and one of the major reasons why they caught up was because of Claude Code.

20:31 - 20:33

Dileep Karri: A simple experiment.

20:35 - 20:44

Dileep Karri: that they were trying to do. It was a group of people who had something together, and it kind of, you know, directed everything else.

20:44 - 20:49

Dileep Karri: Okay? So, that is exactly what has happened.

20:49 - 20:58

Dileep Karri: So, a simple experiment by the team kind of spun out into completely very big, and what I'm going to teach today, in two parts. Part one...

21:01 - 21:09

Dileep Karri: So, platform, Is what we will do, is we will do the basic Set up.

21:10 - 21:17

Dileep Karri: Understand some fundas, And Bill... something.

21:20 - 21:28

Dileep Karri: Part 2... We will try to set up a harness, slash system.

21:28 - 21:37

Dileep Karri: for building. So I will go... I'll show you what is my system for building applications, how would I go about it, and how would I build it all.

21:38 - 21:52

Dileep Karri: Okay? So, folks, for now, observe. This is not meant to be a do-along, because it's an intermediate in tomorrow's advance. Observe what I'm doing very carefully. Don't try to do it along, because you will miss the focus. Please do everything later.

21:53 - 22:02

Dileep Karri: All right? All the recordings and where it is going to be available and all that, it'll be done towards the end of the session. I don't want any questions on that. Okay?

22:03 - 22:14

Dileep Karri: Alright, so now we will get started, and how I prefer working with Claude Code In the purest form.

22:17 - 22:19

Dileep Karri: Okay? Which is the terminal.

22:21 - 22:29

Dileep Karri: Okay? I would strongly suggest I would strongly suggest all of you to...

22:29 - 22:35

Dileep Karri: we get comfortable with the terminal, okay? It is the purest form

22:35 - 22:45

Dileep Karri: working with Cloud Code, and if you are not comfortable with the terminal, what you can do is, you can install Cloud Desktop.

22:47 - 23:00

Dileep Karri: install Cloud Desktop, and in Cloud Desktop, there is a tab called Code that you can use. I'm not going to show that. You can use Cloud Desktop, and you can use it further with that.

23:01 - 23:02

Dileep Karri: Okay?

23:04 - 23:14

Dileep Karri: Alright, so now that I'm showing you with this Claude code and with the terminal, my way of working is Claude code.

23:15 - 23:21

Dileep Karri: Which is my... agent... To do all my tasks.

23:24 - 23:33

Dileep Karri: Okay? And then, I have anti-gravity, As my support system.

23:35 - 23:40

Dileep Karri: Okay, anti-gravity support mainly for Viewing files.

23:42 - 23:43

Dileep Karri: Okay?

23:44 - 24:01

Dileep Karri: mainly for viewing the files, and then how we are going to do the stuff, okay? So, Claude Code will be the muscle, which will be doing all the stuff, the brain which will do everything, anti-gravity will be my support to view the files, and also backup.

24:01 - 24:02

Dileep Karri: In case.

24:03 - 24:06

Dileep Karri: My tokens get exhausted.

24:07 - 24:16

Dileep Karri: Okay, in case my tokens get exhausted, you will be able to use anti-gravity to pick it forward from there.

24:17 - 24:40

Dileep Karri: Okay? So, the way I'm going to set it up is Claude Code will be the agent which is going to do all my tasks. Anti-gravity will be the support to view the files and backup. Now, along with anti-gravity, you can use VS Code, you can use Cursor, you can use Wind Surf, it is completely up to your thing. Okay? So, we are advanced, we are now

24:40 - 24:45

Dileep Karri: in a different time, so we are not going to tell you, okay, how to do with VS Code, how to do with Cursor, how to do with Windsurf.

24:45 - 24:53

Dileep Karri: Everybody has the same VS Code as the underneath thing, so the process of setting it up is going to be absolutely the same.

24:53 - 25:02

Dileep Karri: So we are going to use anti-gravity as the support, so that... and we are going to set up such a system that even if Claude Code tokens

25:04 - 25:11

Dileep Karri: when they get exhausted, even if Claude Code tokens get exhausted, there is a way to pick it up with

25:12 - 25:20

Dileep Karri: Anti-gravity, anti-gravity will continue building, and then you can come back to Claude Code whenever your tokens get reset.

25:20 - 25:40

Dileep Karri: Alright, so that is the kind of building systems that we are trying to set up in the course of today, and we'll build a simple application. What application today I'm planning to build? By the way, I have not tried this application. I will do it live in front of you, so that I will show you how I figure out these things.

25:40 - 25:45

Dileep Karri: Okay, so the application I'm going to build is called Model Console.

25:46 - 26:05

Dileep Karri: So, Perplexity has a new feature called Model Console, wherein when you give a task, it will ask the models to debate, and it will try to build this complete model console. So, I will build the model console today using my Cloud Code anti-gravity setup, okay, to some

26:05 - 26:13

Dileep Karri: extent, and the idea is, what is currently in the max plan, can we set it up ourselves? That is a question.

26:13 - 26:16

Dileep Karri: I'm trying to find an answer.

26:17 - 26:23

Dileep Karri: Maybe not as great as what Perplexity did, but at least to some extent.

26:23 - 26:30

Dileep Karri: Okay? Can I have 3 models debate amongst each other and tell me what to do?

26:33 - 26:38

Dileep Karri: That is what I want to do it in Model Council. That is the thing we are going to build.

26:38 - 26:47

Dileep Karri: Okay? So... Step 1, before we do any building, let us do some basic soft terminal.

26:52 - 27:03

Dileep Karri: We will try to understand some terminal basics, okay? What is a terminal, why do you do it, and how is it that we are going to do some stuff?

27:03 - 27:09

Dileep Karri: Okay? So we will try to understand some, terminals, etc. By the way.

27:09 - 27:29

Dileep Karri: I would advise all of you, in case you are not understanding a particular terminology, and you feel you haven't gotten it right, keep a mobile on your side, have your Gemini or ChatGPT open, just ask it and get the answers, okay? By now, you should be very familiar with these systems, and keep doing that.

27:30 - 27:42

Dileep Karri: Okay? So, for Terminal Basics, there is a great site that I have found Recently, called CodingMarketers.com.

27:43 - 27:47

Dileep Karri: Okay, so let me put it in the... Chat?

27:50 - 28:02

Dileep Karri: So, this is a site, codingformarketers.com. This is a site which helps people to understand the difference between Claude and Claude Code, and also get

28:02 - 28:11

Dileep Karri: a sense of, okay, how is it working? Plus, it will also give you a sense of what are the basics of terminal.

28:12 - 28:22

Dileep Karri: Okay? So, the difference is ChatGPT gives you advice, Claude Code is agentic tools that is able to do the work.

28:23 - 28:32

Dileep Karri: Okay? So, this is an executor, plot code is an executor, while ChatGPT is more like an answering engine that is there.

28:32 - 28:47

Dileep Karri: And, of course, there is some information on what agents are good at, and what you could build, etc. That is something for you to understand, okay? Now, this is a section where everybody needs to be a little bit familiar.

28:47 - 28:57

Dileep Karri: Okay? So there are only these 4 things that you kind of need to understand, and you don't even need to memorize this, okay? You don't have to memorize a single thing.

28:58 - 29:04

Dileep Karri: Okay, you don't have to memorize it, but this is something you need to understand. You need to learn that.

29:05 - 29:21

Dileep Karri: Okay, so number one is navigate. How can you... if there is a folder on your system, how can you get it to the folder? How can you list the files in the current folder? And how do you show the current location?

29:21 - 29:23

Dileep Karri: the folder.

29:23 - 29:42

Dileep Karri: How do you list the files in the current folder, and how do you know the current location, okay? CD is how you go into a particular folder, LS lists the files, and PWD showing the current location. These are the main commands you will work with, okay? In fact.

29:42 - 29:48

Dileep Karri: I won't... I will say LS also is not required. CD is the one that is most required.

29:49 - 30:00

Dileep Karri: Okay? So these are commands that you run on your terminal. That means on your Mac or Linux, there is a terminal window on which you will run all of this.

30:01 - 30:05

Dileep Karri: Okay? And on Windows, you'll have to run it in something called PowerShell.

30:05 - 30:25

Dileep Karri: Okay, there is something called PowerShell that you learn... you run it inside Windows. So for Windows, run it on PowerShell. For Mac or Linux, you run it on the terminal.

Okay, so CD is the one command you need to learn, which is to navigate to a folder on your system.

30:26 - 30:33

Dileep Karri: Then, files, MKDIR means making a directory on your system.

30:33 - 30:50

Dileep Karri: What I would suggest is, if you're a beginner, don't try to make directory with this command, try to create directory with the GUI, and use CD to navigate to the folder. In fact, I believe, other than CD, you don't require any other commands to run the code.

30:51 - 31:01

Dileep Karri: Okay? That is the files, then packages. This one, again, you don't have to understand anything. This is something Claude Code will inherently take care of you.

31:01 - 31:04

Dileep Karri: Okay? And the other is GitHub.

31:04 - 31:08

Dileep Karri: Okay? How many of you are clear about GitHub?

31:10 - 31:12

Dileep Karri: Anybody clear on GitHub?

31:12 - 31:29

Dileep Karri: Okay? For those of you who are not clear of GitHub, or you are still struggling, I will show you how you can work with GitHub in your systems, okay? This is going to be, as I said, intermediate session. We are going to get into a lot of stuff, okay?

31:29 - 31:35

Dileep Karri: But what you can understand is Claude Code can easily do this stuff for you.

31:36 - 31:40

Dileep Karri: Alright, so the things you need to understand is navigation with CV,

31:41 - 31:52

Dileep Karri: And Windows PowerShell is a separate software from your command prompt, which will be required for navigating these Cloud Code folders. I would recommend you to install Windows PowerShell.

31:52 - 32:05

Dileep Karri: Then files, you don't have to worry about all of this. This will all be taken care of by Cloud Code. The only command you will have to run is CD, that is, change directory, and go into a particular folder.

32:06 - 32:17

Dileep Karri: Okay? Git, again, something Cloud Code will manage, packages, again, Cloud Code will manage, but these are the commands that will be run over and over and over again.

32:17 - 32:30

Dileep Karri: Okay, so while you don't have to run these commands, understanding these commands is very important. So my suggestion is, before you touch Cloud Code for the very first time, spend at least one hour on this site.

32:30 - 32:33

Dileep Karri: Going through the information that is given.

32:33 - 32:45

Dileep Karri: Especially the terminal basics. Internalize this information so that when Claude Code says that I'm running this particular command, you know exactly what it is doing, and you're not clueless.

32:45 - 32:46

Dileep Karri: Okay?

32:47 - 32:51

Dileep Karri: On Mac, you go on Terminal, on Windows, you go on PowerShell.

32:52 - 32:58

Dileep Karri: Okay? If you are on Mac, you don't have to install any PowerShell, the terminal would suffice.

33:00 - 33:03

Dileep Karri: Okay? Clear so far, everybody following till now?

33:04 - 33:17

Dileep Karri: Terminal basics, you only need to use CD, that is, change directory, that's all, and rest of the commands, Claude code will take care of for you, but still, you need to understand the meaning.

33:17 - 33:29

Dileep Karri: Okay? You have to understand the meaning of it, that's why I'm asking you to go through it, otherwise you don't have to really understand what each thing requires.

33:29 - 33:44

Dileep Karri: Okay? Then there are a bunch of all the steps, okay? What is code? What is the software stack? There is a bunch of information. I leave it up to you. The other important thing that I want all of you to know, we have

33:44 - 33:53

Dileep Karri: studied this in our respective programs before, but still, two things very important. One is environment variables.

33:53 - 34:05

Dileep Karri: Okay? In environment variables, you are going to store your secrets, like passwords and API keys separately. You should not upload this to GitHub.

34:06 - 34:12

Dileep Karri: Okay? So, ensure that you are very, very clear of this.

34:12 - 34:17

Dileep Karri: And I'm going to show you how I would set up my complete system.

34:21 - 34:23

Dileep Karri: Okay? So...

34:28 - 34:33

Dileep Karri: Alright, so this is the environment variables and a bunch of stuff.

34:33 - 34:41

Dileep Karri: Alright, then there is something about context and tokens. You can go through it, but we'll also cover it as we are going into Cloud Code.

34:42 - 34:58

Dileep Karri: Okay? So, two sections you should definitely go through before you ever touch Claude Code. One is terminal basics, very important for you to understand what are the terminal commands, the meaning of it, not exactly knowing the syntax or anything.

34:58 - 35:06

Dileep Karri: Then the other part, you can go through every section, it is pretty good for non-coders, etc, and all that, but for...

35:06 - 35:07

Dileep Karri: people.

35:07 - 35:24

Dileep Karri: environment variables and API keys, also very, very important. In case you've forgotten about it, do, like, a quick refresher, okay? We'll cover the rest of it later on, but this is a good resource for you to kind of, you know, use it, okay? So now, we will...

35:25 - 35:28

Dileep Karri: We will now get into the...

35:28 - 35:40

Dileep Karri: main setups. First, I will show you the interface of anti-gravity, and then I will show you how you will run it on cloud code, how do you set it up, and then we get started.

35:42 - 35:43

Dileep Karri: Okay?

35:43 - 35:45

Dileep Karri: So, let's get to it.

36:01 - 36:19

Dileep Karri: So, when you install anti-gravity, okay, so when you kind of work with anti-gravity, this is how your setting is going to be. There are two modes in anti-gravity. One is the editor mode, where you can look at the files and navigate. Other is the agent manager mode.

36:19 - 36:24

Dileep Karri: Let me, I think, share my desktop, because I think some modes will not be seen clearly.

36:29 - 36:40

Dileep Karri: So this is the mode of editor. I can open a folder, and in the folder, I can view the files, etc. That is the main interface.

36:40 - 36:47

Dileep Karri: And then I can use Agent Manager, which has a very different interface.

36:47 - 36:54

Dileep Karri: Okay, one is called, agent manager, and other is the editor, okay? Two different things.

36:54 - 36:56

Dileep Karri: Alright, so, first...

36:57 - 37:03

Dileep Karri: what I'll do is, I'm going to set up my model console currently. So, for that, I open my

37:03 - 37:09

Dileep Karri: directory, I open my... Downloads.

37:09 - 37:10

Dileep Karri: Okay?

37:11 - 37:14

Dileep Karri: And I'll create a new folder.

37:15 - 37:19

Dileep Karri: And this new folder, I call it Model Console.

37:20 - 37:26

Dileep Karri: This is the project we are going to do today. So, every new project that you're trying to do, you should

37:27 - 37:36

Dileep Karri: create a new folder for yourself. Every new thing that you're trying to build, have a new folder created. That is the model console.

37:37 - 37:42

Dileep Karri: Okay, so now that I've created this folder Model Console, I am...

37:42 - 38:02

Dileep Karri: do this. Anti-gravity, for folks who don't know, anti-gravity is the, you know, integrated development environment, okay? Which means a place to write code or orchestrate your code that has been built by Google. So Google's team has built this software.

38:03 - 38:06

Dileep Karri: So, I will go here, I will open the folder.

38:07 - 38:16

Dileep Karri: Okay, and the folder that I'm going to open is going to be the model console. Right now, it is completely empty.

38:19 - 38:20

Dileep Karri: Okay?

38:20 - 38:22

Dileep Karri: I'll say, I trust.

38:23 - 38:26

Dileep Karri: So my model tonsil is...

38:30 - 38:38

Dileep Karri: ready. So I have my model console, the folder that is available for me to build that stuff.

38:39 - 38:48

Dileep Karri: Okay? Anti-gravity is something you'll have to download. Google anti-gravity, figure out how do you download an audio install. That, I would leave it up to you.

38:48 - 38:55

Dileep Karri: Okay, so you have an empty folder, model console, and now we are going to work the text.

38:55 - 39:10

Dileep Karri: The next part is, we will install the Cloud Code extension, okay? So, on anti-gravity, or VS Code, or Cursor, wherever you are, it will always have something called extensions that you can go for.

39:10 - 39:16

Dileep Karri: On anti-gravity, it is here, on the left-hand side. You can open these extensions.

39:16 - 39:20

Dileep Karri: And here, you can search for Claude Code.

39:22 - 39:31

Dileep Karri: It is searching for all of the extensions, and here, always install the extension which Anthropic has given.

39:31 - 39:49

Dileep Karri: Okay, so if I click this, this is the Anthropic extension. You see here, anthropic.claw.code, so it's the official extension supported by Anthropic. Install this version, don't install third-party services. Install the Cloud code like this.

39:50 - 40:01

Dileep Karri: Okay, so you have the Cloud Code extension, and once you install, you will see it on the top over here, or you will see it on the left over here.

40:02 - 40:12

Dileep Karri: Okay? You'll see it on the top or on the left, so that's exactly where you'll see the extension. Now, I'm going to open my Cloud Code.

40:13 - 40:29

Dileep Karri: Okay? So now, in the Cloud code, there are absolutely no sessions with this, okay? I did a fresh instance over here, so that I can show you how it would look like. So there is a complete fresh session over here that you can see.

40:29 - 40:38

Dileep Karri: Cloud code, new session, either it is local or on the web, we will actually go for the local session right now, because we're going to work on our folder.

40:39 - 40:44

Dileep Karri: Okay? So, quick recap of what we have done so far.

40:47 - 40:53

Dileep Karri: So, what we deemed... what we were looking at is... We saw the terminal basics.

40:53 - 41:01

Dileep Karri: We looked at anti-gravity. Anti-gravity is a thing by Google, you have to install it.

41:01 - 41:10

Dileep Karri: Okay? And in anti-gravity, you have two modes, the editor mode, And the agent mode.

41:12 - 41:25

Dileep Karri: Okay? For the purpose of our usage today, editor mode is sufficient, because we don't need agent mode, because the agent mode and everything that we're going to run is completely by.

41:25 - 41:26

Dileep Karri: Lord.

41:26 - 41:27

Dileep Karri: Board.

41:28 - 41:33

Dileep Karri: Okay? And this cloud code, I have installed it via the extensions.

41:35 - 41:43

Dileep Karri: Whether it is cursor, whether it is Windsurf, whether it is Kiro, whether anything you are looking at.

41:43 - 41:46

Dileep Karri: Right? It has these extensions

41:46 - 41:53

Dileep Karri: part, click on your extensions, and then install the Cloud Code for

41:53 - 41:58

Dileep Karri: You know, by the Anthropic. Use the official plugin.

42:01 - 42:21

Dileep Karri: Okay? So you are going to use this. So what we are going to do is anti-gravity by Google. We are using the editor mode only, we don't really require any kind of agent mode, okay? So, we will focus only on the editor mode of anti-gravity, and I'll tell you the reason why we'll require this setup.

42:21 - 42:34

Dileep Karri: Okay? And we get the Claude Code extension from Anthropic, and the extensions are available, and you can see the icon of Claude Code, and this will be the place where we are

42:35 - 42:42

Dileep Karri: Actually going to set it all up, and this will be the place where we are going to orchestrate and build the stuff that we are looking.

42:43 - 42:47

Dileep Karri: Alright, so for the... part of...

42:47 - 42:52

Dileep Karri: Anti-gravity, okay? You will have to go to the editor mode.

42:52 - 42:58

Dileep Karri: In the editor mode, what you'll have to do is, you will have to check on the extensions.

42:59 - 43:13

Dileep Karri: Okay? And in the extensions, you go to Claude Code for VS Code by Anthropic. This is the extension you have to search for, and you have to install this. So you'll have an install button, which you would install.

43:14 - 43:23

Dileep Karri: Okay, so now that we have done this, I think, again, it went... the folder went away for some reason. Let me open that up.

43:26 - 43:33

Dileep Karri: I created a new folder, Model Console, completely empty, and this model console is what we are working with.

43:34 - 43:51

Dileep Karri: Okay? Clear. Everybody, are we clear? If you're not clear also, this is the rudimentary part. We will go about it. I'm not going to talk about a lot of stuff. I see a lot of tangential questions, like, what about bedrock, what about this, what about that? I'm not going to get into it.

43:51 - 44:14

Dileep Karri: I'm going to work on cloud code and anti-gravity. Instead of anti-gravity, you want to replace something, you can replace that. If instead of something else you want to replace, you can absolutely replace that, okay? If you're not able to figure it out, if you're not able to see it, after the sprint, try it out yourself, figure it out by yourself, okay? You are all now closer to AI generalists, I expect you to kind of figure it out.

44:15 - 44:21

Dileep Karri: Okay, so now I have the Claude code that is present over here.

44:21 - 44:25

Dileep Karri: And this is the place where I will do my sessions.

44:26 - 44:44

Dileep Karri: Okay? So now, in model console, I will start my session, because here is where I will start building stuff. Because my agent is going to be Claude Code, I really don't require my agent of anti-gravity over here. So, I will close the agent view.

44:45 - 44:49

Dileep Karri: I will kind of drag it over here, and I will be...

44:50 - 44:56

Dileep Karri: focusing a lot on what the cloud code is doing. So, I will start a new session.

44:58 - 45:09

Dileep Karri: Okay? This is my new session, and this is exactly how the Claude code would look like. Okay? I will start with this mode, but later on.

45:09 - 45:12

Dileep Karri: I will also switch to the terminal.

45:12 - 45:21

Dileep Karri: Okay? Once you start your Cloud Code, you will have to log into your Cloud Code account. There are two ways to do that.

45:21 - 45:28

Dileep Karri: Number one, you will have to log into your existing subscription. You need to have at least a pro

45:28 - 45:32

Dileep Karri: or you need to have a cliche max account for that.

45:33 - 45:45

Dileep Karri: Okay? You need to have at least a pro, and we need to have at least a, you know, a max account to access Cloud Code. Cloud Code is not available on the free plan.

45:46 - 45:55

Dileep Karri: Okay? Are we clear? If you want to use Cloud Code on the free plan, you'll have to go to the console.anthropic.com and set up the API.

45:56 - 45:57

Dileep Karri: Okay?

45:58 - 46:13

Dileep Karri: I see a lot of questions. Wait till the end, I'm going to do this. People who are asking, will you get a checklist? Unfortunately, no. I'm going to explain everything. Look at what I'm doing. Later parts, you can figure it out.

46:15 - 46:16

Dileep Karri: Okay?

46:16 - 46:33

Dileep Karri: All right. As I told you, today is an intermediate session. Today is intermediate, tomorrow is going to be advanced. Even on the intermediate, I'm going pretty slow, explaining everything clearly, but please understand that I cannot go slower than this.

46:33 - 46:49

Dileep Karri: Okay? If you are anytime feeling an anxiety that this session is becoming a little bit too much for me, okay, don't worry, you can maybe just watch what is happening without getting anxious, and watch the recording later on, or, you know, you can do it, kind of...

46:49 - 46:51

Dileep Karri: Everything else over there.

46:52 - 47:03

Dileep Karri: Alright, so let's get into it. So, I have Cloud Code, I opened a new session. Now, this session that you see here is present in my folder.

47:04 - 47:05

Dileep Karri: Okay?

47:05 - 47:18

Dileep Karri: you know, I have kept it in my folder called Model Console. From within my model console, I'm working. You can see here, Model Console, I am working on my local folder, Model Console right now.

47:20 - 47:27

Dileep Karri: Okay, so the way to go into that folder is, I go to Open Folder, and I get into Model Console. Everybody clear so far?

47:28 - 47:32

Dileep Karri: Is everybody clear so far? The host is... Okay?

47:34 - 47:41

Dileep Karri: If you are getting an error, screenshot it, put it in ChatGPT, Perplexity, or any other things, that'll help you debug.

47:42 - 47:50

Dileep Karri: Alright? Okay. Now that I have set this local folder in which I'm going to set up my, things.

47:50 - 48:09

Dileep Karri: I will now get started. So, some of the things that you'll need to do is... the first thing you'll need to do is something called commands. And there are a lot of commands that you need to remember. The very first command you need to do is something called login, okay? Slash login is the very first

48:10 - 48:21

Dileep Karri: command you need to do once you get into Cloud Code. So, if you have a Pro or a Max plan, you can log into Anthropic for your Pro and Max plan, so that usage gets

48:21 - 48:31

Dileep Karri: can be used in plot code. If you are on the free plan, you need to go to console.anthropic.com and purchase the credits.

48:32 - 48:46

Dileep Karri: Okay? If you're on the pro plan, or Max plan, you can use it directly. If you are on the other plan, you will have to, you know, purchase some credits on Anthropic Council and get it added.

48:46 - 48:52

Dileep Karri: Okay, so the first core thing is the login command. Is the login command clear, everyone?

48:53 - 48:56

Dileep Karri: Okay, is the login command clear?

48:58 - 49:12

Dileep Karri: Okay? And by the way, the rule of thumb I'm going to do is, I'm going to go with 80-20. 80% of people say, good, I will move ahead. If it is, you know, less than 80%, that is when I would repeat.

49:13 - 49:17

Dileep Karri: So, login is the very first command that we will go for.

49:18 - 49:27

Dileep Karri: Alright? The next command, which is very, very, very important. Can anybody guess which is the next command that is super important for cloud code?

49:27 - 49:32

Dileep Karri: anybody who is, like, super important. I know some people know Claude Code.

49:32 - 49:38

Dileep Karri: Okay? I guessed it, nobody's going to use that. The command is USAGE.

49:40 - 49:54

Dileep Karri: Okay? So there is this account and usage, which is very, very important, because how much are you using your command becomes absolutely important, okay? So I'll go to account and usage.

49:54 - 49:55

Dileep Karri: over here.

49:55 - 49:58

Dileep Karri: Okay? And you can see here.

49:59 - 50:15

Dileep Karri: Our weekly sonnet is 20% session I just started, okay, so it is 0%, but we will fill it up in the next 2 days. So, account and usage is something that you all have to very well, very importantly to follow.

50:16 - 50:20

Dileep Karri: Okay? So, the way to do that is slash...

50:20 - 50:23

Dileep Karri: And you will see, when I click on usage.

50:24 - 50:32

Dileep Karri: There is this account and usage that comes in. That is how you will see exactly how much usage we have done.

50:33 - 50:41

Dileep Karri: Okay? If you're on the pro plan, assume that you are building 20, 25 minutes, your tokens are exhausted.

50:43 - 50:46

Dileep Karri: Okay? Your tokens are completely exhausted.

50:49 - 50:53

Dileep Karri: Alright, so empty folder, empty context.

50:53 - 51:03

Dileep Karri: two commands, login and usage, extremely important. The other command to use is something called model, okay? And that is something called switch model.

51:03 - 51:18

Dileep Karri: Okay, so currently, I am using the Opus 4.6 with the 1 million contacts, because I'm on the max plan, I can afford to use this, but for others, you will have to kind of use it basis of wherever you are.

51:19 - 51:29

Dileep Karri: Okay? So, that is exactly how you'll do, and I'll keep prompting you where you should use which model, etc. But one thing to kind of...

51:29 - 51:36

Dileep Karri: remember is, when you are using, Claude code, Further thinking?

51:36 - 51:39

Dileep Karri: And the hard planning stuff, use Opus.

51:40 - 51:44

Dileep Karri: Once your plans are ready, then you can use other models.

51:46 - 51:51

Dileep Karri: Okay? Once your plans are ready, you can use other models.

51:52 - 51:55

Dileep Karri: Alright? So please understand this very, very carefully.

51:55 - 52:08

Dileep Karri: try... don't try to use Opus for everything. If you use Opus for everything, your mod... your numbers are going to be crazy. You will, lose everything in, like, 10-15 minutes.

52:09 - 52:28

Dileep Karri: Okay? So, that is exactly that. So, ensure that you are using Opus for only the main important things. Okay? So, that are the main commands. Now, what I'm going to do is, I will go to the terminal experience, okay? I'll switch back in my settings.

52:29 - 52:33

Dileep Karri: Okay? So I will use the terminal of Cloud Code.

52:33 - 52:49

Dileep Karri: Okay, and instead of this, I will use the Cloud Code in the terminal, because I like Terminal, and there is an advantage to terminal that I want you all to see, so I'm going to use Claude Code in the terminal instead of the native UI.

52:51 - 52:52

Dileep Karri: Okay?

52:53 - 52:56

Dileep Karri: Let me close this... Welcome.

52:57 - 52:58

Dileep Karri: This...

53:04 - 53:09

Dileep Karri: I think maybe I had to restart anti-gravity, let me... do that.

53:11 - 53:14

Dileep Karri: Just a second, I'll restart anti-gravity.

53:48 - 53:51

Dileep Karri: Okay, back to anti-gravity.

53:52 - 53:53

Dileep Karri: And...

54:11 - 54:14

Dileep Karri: Okay, back on anti-gravity, click on Cloud Code.

54:15 - 54:16

Dileep Karri: Is it bliss.

54:18 - 54:27

Dileep Karri: Okay? So, the other way to get terminal is this way. I'll say, new terminal, I'll kind of...

54:31 - 54:32

Dileep Karri: Close this completely.

54:33 - 54:39

Dileep Karri: I'll go on terminal, okay, and I can put something like a command, plot.

54:40 - 54:46

Dileep Karri: I say, trust the folder, And I am now present on the plot code.

54:49 - 54:56

Dileep Karri: Okay, so there's this command called terminal, I say new terminal, I open the terminal over here.

54:57 - 55:01

Dileep Karri: Okay? And then, I can use...

55:01 - 55:12

Dileep Karri: Claude in the terminal, okay? I love to use Claude Code in the terminal, because that is where it has the best capability. It is a learning curve, as I said, for those who are

55:12 - 55:21

Dileep Karri: a little not so sure about this. You can run it in the native Cloud Code way, but I prefer to run it in the terminal.

55:22 - 55:37

Dileep Karri: Okay? So now, there are a bunch of things that you're seeing here. We will discuss it tomorrow. There are some advanced settings of Cloud Code, which I'll show tomorrow, but I have made some settings of Cloud Code over in here, in this terminal.

55:37 - 55:46

Dileep Karri: Wherein, I am using this folder model console, and here it is saying that I'm using 2% of my tokens.

55:46 - 55:52

Dileep Karri: Okay, so as I am doing my work, I can see this usage of tokens.

55:53 - 56:03

Dileep Karri: Okay? How to enable this is a little bit advanced. I'm going to share the thing tomorrow. So tomorrow's session is going to be much advanced than today.

56:03 - 56:14

Dileep Karri: Okay? So tomorrow's session is going to be slightly more advanced than today, so tomorrow is going to be that, so... but we are going to actually see how we are going to do a bunch of stuff.

56:14 - 56:21

Dileep Karri: And here you can see that your terminal is ready from where you can start building what you want to build.

56:21 - 56:27

Dileep Karri: Okay? Now, let me tell you... this. If you are

56:27 - 56:32

Dileep Karri: building stuff with Claude, or if you're building stuff anywhere.

56:32 - 56:38

Dileep Karri: The most efficient token usage is possible only if you have got clarity.

56:39 - 56:50

Dileep Karri: Okay? The only efficient usage is possible if you have got clarity. If you don't have clarity, then you will not be able to build it at all.

56:50 - 57:04

Dileep Karri: Okay? So if you have got clarity on what you want to build, your tokens will be saved, and that is the biggest token saving kind of thing overall, okay? So that is exactly what it is. You will have to

57:04 - 57:16

Dileep Karri: plan things properly in your head. If you are not planning things properly in your head, you will not... your tokens are going to be exhausted. So the planning part becomes very, very important.

57:16 - 57:34

Dileep Karri: Okay? So now we will try to build the model console. For that, what I'm going to do is, I'm going to add a scaffolding of skills, okay? So first thing, like, I don't have to remember anything that is there. First, I will say.

57:34 - 57:41

Dileep Karri: What are the skills that are... present with food.

57:44 - 57:45

Dileep Karri: So, I can just...

57:47 - 58:04

Dileep Karri: tell what are the skills that I have. There are a bunch of skills that I have written, so you will see all the skills that are there. I will talk about some advanced things tomorrow, like I'll talk about Claude Mem tomorrow, very important method to, you know, control your memory.

58:04 - 58:07

Dileep Karri: I will talk about, some...

58:07 - 58:18

Dileep Karri: things like superpowers, that is, again, a very important, skill. So I'll talk about Claude Mem, I'll talk about superpowers, and a bunch of other things.

58:18 - 58:21

Dileep Karri: then I will say, what are the

58:22 - 58:30

Dileep Karri: skills that are... sorry. Skills are there, right? I will ask, what are the MCPs that are?

58:32 - 58:33

Dileep Karri: Available.

58:33 - 58:36

Dileep Karri: So, any MCP servers that are available.

58:39 - 58:46

Dileep Karri: Okay? So I have all of this MCP servers. I have got Airtable, I have got Context7, Asana, Canva.

58:46 - 58:57

Dileep Karri: you know, XR, Gmail, Google, Granola, Miro, Notion, I have a bunch of... MCP servers that are available.

58:57 - 59:02

Dileep Karri: Okay, so now I know that I have got MCP servers, I have the skills.

59:02 - 59:08

Dileep Karri: Okay? So the first, I'll show you what is my process going to be while I build this.

59:13 - 59:20

Dileep Karri: So, my process is going to be... I'm going to build...

59:24 - 59:27

Dileep Karri: A sort of... FBRD?

59:28 - 59:33

Dileep Karri: That is a product requirements document for my model console.

59:36 - 59:41

Dileep Karri: Okay? And I will also then convert this into tasks.

59:43 - 59:49

Dileep Karri: And those tasks, I will make my Claude execute.

59:52 - 59:53

Dileep Karri: Okay?

59:53 - [01:00:05]

Dileep Karri: So, what I'm going to do is, I'm going to build a PRD, a product requirements document for my model console. That PRD, I'm going to convert it into tasks, and those tasks, I will make my cloud execute.

[01:00:06] - [01:00:09]

Dileep Karri: Okay, now here is the systems thinking I want to bring to my plate.

[01:00:09] - [01:00:13]

Dileep Karri: I am not the best PM in the world.

[01:00:15] - [01:00:17]

Dileep Karri: I am not the best product manager.

[01:00:18] - [01:00:21]

Dileep Karri: I am not the best Engineering manager.

[01:00:22] - [01:00:28]

Dileep Karri: Yet, I want to build a product That shines.

[01:00:29] - [01:00:49]

Dileep Karri: I want to build a product requirements document, a technical document that explains what I'm going to build. I want that product requirements document to be the best, but I am not the best product manager, I am not the best engineering manager, so I want to still build a product that shines. So there is this knowledge gap

[01:00:52] - [01:00:58]

Dileep Karri: that affects me, okay? So, I want to build something, but

[01:00:58] - [01:01:05]

Dileep Karri: I am not as good as the person like anybody who can build it better.

[01:01:09] - [01:01:14]

Dileep Karri: Okay? And that is where skills... come into play.

[01:01:15] - [01:01:21]

Dileep Karri: Okay? You can consider skills, As something like recipes.

[01:01:23] - [01:01:28]

Dileep Karri: You can look at MCP, your Model Context Protocol, as your tools

[01:01:29] - [01:01:40]

Dileep Karri: Okay? So skills are your recipes. That means skills are those playbooks that I use again and again and again.

[01:01:41] - [01:01:49]

Dileep Karri: But if I know the recipe, it is not sufficient. I need tools to cook the recipe, and that is where MCP comes into play.

[01:01:50] - [01:01:54]

Dileep Karri: All of that has to be built by a chef.

[01:01:54] - [01:02:03]

Dileep Karri: A chef brings a recipe to life with the MCP, the tools, and in our case, our chef is Claude.

[01:02:04] - [01:02:04]

Dileep Karri: board.

[01:02:05] - [01:02:07]

Dileep Karri: Or underlying agent.

[01:02:08] - [01:02:21]

Dileep Karri: Okay? Cloud code, the underlying agent, is the chef. Skills are my recipes. MCP are the tools. So what I'll do is, I will try to get some skills.

[01:02:21] - [01:02:25]

Dileep Karri: Best skills written by some good product managers.

[01:02:27] - [01:02:42]

Dileep Karri: Best skills written by good product managers, best skills may be written by engineering managers. Orchestrate all of that together to kind of ensure that you can, you know, build your stuff.

[01:02:43] - [01:02:45]

Dileep Karri: Okay? There is no...

[01:02:45] - [01:03:02]

Dileep Karri: correct answer over here. You might have a different setup, I might have a different setup, but what I'm trying to say is, you need some kind of systems thinking and judgment. Judgment becomes very important here, because your judgment is going to tell exactly how you can

[01:03:02] - [01:03:06]

Dileep Karri: You know, whether this skill is good or not good.

[01:03:07] - [01:03:18]

Dileep Karri: Okay, so I'll show you a skill that I have not used so far. I'm going to set up that skill in my system, and I'm going to use that skill to build my stuff.

[01:03:18] - [01:03:25]

Dileep Karri: Okay? So the skill that I have... so there is this... Very good, you know...

[01:03:28] - [01:03:40]

Dileep Karri: There is a very good product manager that I follow on Twitter, called Pavel Hurin, who has given a lot of skills, okay? So, he has built a repository

[01:03:41] - [01:03:43]

Dileep Karri: called PM Skills.

[01:03:45] - [01:03:52]

Dileep Karri: Okay, this is a PM Skills Masterplace, which is the AI operating system for better product decisions.

[01:03:52] - [01:03:54]

Dileep Karri: And when I go through this skill.

[01:03:55] - [01:04:06]

Dileep Karri: Okay? And if I go towards the end, you see that some of the best product managers, are there. Marty, Kagan, Teresa, Torres, right? Some of the best

[01:04:07] - [01:04:15]

Dileep Karri: people out there, these are the skills that we are going to use. Okay, so I'll put this on the chat.

[01:04:20] - [01:04:40]

Dileep Karri: So this is the skills that are available, okay? But again, I'll tell you... I'll tell you where my judgment comes into play. Number one, I'm going to check on how many people... whether this repository is good or not. Look at this. There are 1,100 forks, that means 1,100 people.

[01:04:40] - [01:04:47]

Dileep Karri: have, tried to copy the repository and try to add their own stuff that people are building.

[01:04:47] - [01:04:49]

Dileep Karri: on top of this. That is number one.

[01:04:49] - [01:04:56]

Dileep Karri: Second, there are 10,000 people who are trying to use this repository.

[01:04:56] - [01:05:06]

Dileep Karri: Okay? Around 1,100 people have forked it and are trying to use it. 10,000 people are using this repository. Now, why do I need to use a skill?

[01:05:06] - [01:05:13]

Dileep Karri: There is a knowledge gap between me and the best product manager. So the best product manager has written.

[01:05:13] - [01:05:16]

Dileep Karri: How he would create a product.

[01:05:16] - [01:05:21]

Dileep Karri: The best chef has written the recipe. Your grandma.

[01:05:21] - [01:05:23]

Dileep Karri: Has written a recipe.

[01:05:23] - [01:05:39]

Dileep Karri: Okay? Will you be stubborn and say, even though my grandma has written his recipe, I will try to rediscover it on my own, or you will be wise enough to figure that I will stand on the shoulder of giants, I'll take my grandma's recipe, and I will build it and make it my own.

[01:05:40] - [01:05:54]

Dileep Karri: I follow the same philosophy. I will go to my grandma's recipes, and I will try to improve upon it, add my own flavor, or add my own judgment and taste.

[01:05:54] - [01:05:55]

Dileep Karri: On top of that.

[01:05:55] - [01:06:14]

Dileep Karri: Okay? So that is exactly why we will use some skills, because I want to use repeatable playbooks, and the other part is, there are 10,000 people who have read these playbooks, 1,100 people who are using these playbooks into their own work.

[01:06:15] - [01:06:33]

Dileep Karri: Right? So I want to build this playbook, and I want to ensure that I use this playbook for my usage. Okay? And I'm going to teach you some very, very important, a very difficult trick. Pay very close attention. It's a very difficult trick.

[01:06:33] - [01:06:36]

Dileep Karri: of how I will use these skills.

[01:06:36] - [01:06:40]

Dileep Karri: Okay? Watch very, very carefully. If you miss it, you miss it, that's all.

[01:06:41] - [01:06:42]

Dileep Karri: Okay, I copied this.

[01:06:44] - [01:06:50]

Dileep Karri: I open... Anti-gravity, my model console.

[01:06:51] - [01:06:54]

Dileep Karri: Okay? In the chat, I'm going to paste it.

[01:06:55] - [01:06:56]

Dileep Karri: And I'll say...

[01:07:00] - [01:07:11]

Dileep Karri: I am going to use this PM Skills GitHub, but I don't want to use all of the skills. What I'm trying to do is build a model console app.

[01:07:11] - [01:07:25]

Dileep Karri: It is an app where, if I give in a prompt, it is going to consult 3 or 4 models of my choice, and then it will use those models to get their view on my prompt.

[01:07:25] - [01:07:37]

Dileep Karri: They will work with each other, debate with each other, and then they will give me the final answer, along with a table saying that the model agrees, disagrees, etc, and all that.

[01:07:38] - [01:07:46]

Dileep Karri: So, for that, what are those PM skills that are useful for me that I need to set it up here?

[01:07:49] - [01:07:58]

Dileep Karri: Okay? So all I'm doing is I copied the GitHub repo, I'm saying I want to use this, and I have given this entire thing.

[01:08:07] - [01:08:10]

Dileep Karri: Okay? So, now it is...

[01:08:11] - [01:08:18]

Dileep Karri: It is asking me a few permissions, what to do, what not to do. If you understand, fine. If you don't understand, just say yes.

[01:08:21] - [01:08:32]

Dileep Karri: Okay, so what is happening is, it is getting the GitHub repo. So here, you don't have to worry about, you know, what is the complex process that you need to do, etc. Copy the link.

[01:08:32] - [01:08:45]

Dileep Karri: dump it in Cloud Core, tell what you want to do, let Claude Code figure it out, okay? It is intelligent enough. Even if it gets stuck somewhere, it will try to figure out what needs to be done, and do this.

[01:08:47] - [01:08:50]

Dileep Karri: Okay? So, here you go.

[01:08:50] - [01:09:02]

Dileep Karri: What it is saying is, honest take. Most PM skills in the Triple are for PM strategy work, not for building an app. For a model console app built, only a handful are genuinely useful.

[01:09:03] - [01:09:10]

Dileep Karri: Okay? Handful are genuinely useful. I'd skip the whole plugins you don't need, and install just these.

[01:09:13] - [01:09:23]

Dileep Karri: Okay? You see this right? Instead of downloading everything, get your link, ask, this is what I want to build, what is useful for me.

[01:09:23] - [01:09:29]

Dileep Karri: Okay? It will tell you exactly what is useful, and you can do this. So, I'll say...

[01:09:30] - [01:09:37]

Dileep Karri: install the must-have and nice-to-have toolkit so that I can, kind of go ahead with that.

[01:09:47] - [01:09:48]

Dileep Karri: Okay?

[01:09:49] - [01:09:54]

Dileep Karri: So I say install the must-have and nice-to-have toolkit so that I can go ahead with that.

[01:09:57] - [01:10:06]

Dileep Karri: So now I'm asking it to install those skills. Are you clear with this? Don't ever install every skill that are required.

[01:10:07] - [01:10:23]

Dileep Karri: Okay, don't install every skill. Try to check if those skills are useful for you, and then do that. So now, you say that it is telling that these are Claude Code plugins. Plugins are nothing but collection of skills.

[01:10:23] - [01:10:27]

Dileep Karri: Okay, a collection of skills is called plugins.

[01:10:27] - [01:10:42]

Dileep Karri: For example, I might have a skill for SEO, a skill for copywriting, a skill for landing page, etc. Then all of those skills together will become a plugin called a marketing plugin.

[01:10:43] - [01:10:50]

Dileep Karri: Okay, so what I'll do is, it is asking me to run some commands, so I'll copy and run these commands.

[01:10:54] - [01:11:03]

Dileep Karri: Okay? So, first, I have to run step one, plug in Marketplace, this thing. It is done. Then, I have to install these plugins.

[01:11:07] - [01:11:10]

Dileep Karri: Okay, I think I'll do it one by one.

[01:11:13] - [01:11:19]

Dileep Karri: So, as I am working on my terminal, you see that my usage is increasing.

[01:11:19] - [01:11:22]

Dileep Karri: Okay, so first let me install this.

[01:11:23] - [01:11:38]

Dileep Karri: So here, once you try to install, it is asking, install for you, install for collaborators, install for you in this report only, or black to plugin list. So I'll say, install for me only in this report.

[01:11:41] - [01:11:43]

Dileep Karri: Okay? Then the other one...

[01:11:47] - [01:11:51]

Dileep Karri: All I'm doing is just copy-pasting what it is asking me to do.

[01:11:54] - [01:11:55]

Dileep Karri: Again, install.

[01:12:00] - [01:12:01]

Dileep Karri: Copy, paste.

[01:12:06] - [01:12:09]

Dileep Karri: I'm installing it only for my triple.

[01:12:11] - [01:12:20]

Dileep Karri: Alright, so I have added my skills, I have added all the things. I will run reload plugins.

[01:12:22] - [01:12:28]

Dileep Karri: Okay? All my plugins or everything that I have installed have been set.

[01:12:31] - [01:12:45]

Dileep Karri: Okay? I am using it only for this repo, because I have got other skills, I don't want these to clash with that. So, for this demonstration, I want to keep it here. If you kind of want to use it, you can use it anywhere else. Clear so far, everybody?

[01:12:47] - [01:12:49]

Dileep Karri: Is everybody clear?

[01:12:54] - [01:13:11]

Dileep Karri: Great. So now that majority of you are clear, we have set up the skills, now is the time we will start brainstorming and building everything, okay? Now let me see if something has been done.

[01:13:11] - [01:13:12]

Dileep Karri: Okay?

[01:13:14] - [01:13:15]

Dileep Karri: this...

[01:13:24] - [01:13:27]

Dileep Karri: Just give me a sec...

[01:13:40] - [01:13:41]

Dileep Karri: Yeah, this one.

[01:13:42] - [01:13:45]

Dileep Karri: Are you able to see this on the left-hand side?

[01:13:48] - [01:13:50]

Dileep Karri: there is a folder called .clawed.

[01:13:52] - [01:14:06]

Dileep Karri: Right? There is a folder called .cloud. Look at this. In the folder called .claw, there is a file that is present. So, one thing you need to understand is, whenever I have a dot in front of my folder name.

[01:14:06] - [01:14:23]

Dileep Karri: that folder is hidden, okay? That folder is hidden from any other, for desktop or anything, and because I am on an integrated development environment, like anti-gravity, I can see my hidden folders also.

[01:14:25] - [01:14:38]

Dileep Karri: Okay, I can see my hidden folders also, and that is exactly why I will... I need anti-gravity to see the files that are being made. So now that we have the Explorer on the side.

[01:14:38] - [01:14:56]

Dileep Karri: Okay? You will see this, because we are working on Claude, and we are doing a bunch of stuff, some terminals, the commands that we are running, it started building this .claw folder, okay? The .cloud folder has been built because it has been running this entire stuff.

[01:14:56] - [01:15:12]

Dileep Karri: Okay, so what we are going to do next is, we are now actually going to start our building process, where we are going to brainstorm, and we are going to run the, you know, building the model console.

[01:15:13] - [01:15:15]

Dileep Karri: Okay, so now I'm going to say...

[01:15:16] - [01:15:24]

Dileep Karri: with the skills and plugins that I have just installed, I want to start building my model console.

[01:15:24] - [01:15:27]

Dileep Karri: Kindly help me start with the process.

[01:15:30] - [01:15:48]

Dileep Karri: Okay? So, I will start with this. The reason why I'm using Claude Code with anti-gravity is Claude Code will not be able to kind of use it or see the files. Cloud Code code cannot... you cannot see the files that is built with Claude Code.

[01:15:49] - [01:16:00]

Dileep Karri: Okay, that's why I'm using anti-gravity. Are you folks clear about why we are using anti-gravity? Because whatever Claude is building, if you want to see it, you will require anti-gravity as your editor.

[01:16:01] - [01:16:05]

Dileep Karri: I can use Cursor, I can use VS Code, I can do anything.

[01:16:07] - [01:16:13]

Dileep Karri: Okay? Now you see here. So 3 plugins are loaded. I can create PRD,

[01:16:13] - [01:16:28]

Dileep Karri: PM product discovery, PM execution. Before we jump into a PRD, I need to lock down a few fundamentals about the Model Console app. Let me kick off with brainstorming. We will flow into the create PRD with the answers.

[01:16:28] - [01:16:33]

Dileep Karri: Okay? Models. Which 3 to 4 you want on the console? What are the

[01:16:33] - [01:16:38]

Dileep Karri: models that I want on my console. Debate mechanics, how many ROMs?

[01:16:39] - [01:16:43]

Dileep Karri: Do I want round one, where each model answers independently?

[01:16:44] - [01:16:55]

Dileep Karri: Round 2, each model sees others' answers and critiques or updates. Round three, optional final statements. Synthesizer, a separate judge which writes the final verdict.

[01:16:56] - [01:17:10]

Dileep Karri: Form factor, what are you building? Do you want to build a web app? Do you want to build a skill or a plugin? Etc? API access, do you have the API keys? What is the output format? How do you want the output format?

[01:17:10] - [01:17:26]

Dileep Karri: Okay? So, because it has given me all of this information, so basically it is saying, you answer these questions for me, then I'm going to run this particular skill and produce my complete PRD, and then flag risks before we write any code.

[01:17:27] - [01:17:40]

Dileep Karri: Okay, so first level is that it is going to tell me... it is asking me these questions, and it is going to tell me exactly what is it that we need to build. So now, I'll answer these questions.

[01:17:41] - [01:17:53]

Dileep Karri: I want to use Claude Sonnet 4.6, GPT-5, Gemini 3.1, and Grok, latest model. These four models as part of my...

[01:17:53] - [01:17:55]

Dileep Karri: model council.

[01:17:55] - [01:18:11]

Dileep Karri: I would definitely run two rounds at least, and then have a third round, which is optional, and the synthesizer writes the final verdict. I want my synthesizer model to be Claude Opus 4.6.

[01:18:12] - [01:18:16]

Dileep Karri: And the form factor, I want it to be a web app, so that I put the prompt.

[01:18:16] - [01:18:32]

Dileep Karri: it will show me those different debates that is happening, and the output format, it should appear on the chat, like a verdict table, agree, disagree, with the conference course, reasoning trace, and an exportable markdown that I could use.

[01:18:35] - [01:18:44]

Dileep Karri: So I'm giving the complete specification that I require, and then I say, on API axis...

[01:18:44] - [01:18:46]

Dileep Karri: I have open router.

[01:18:50] - [01:18:59]

Dileep Karri: Okay? On the API access, I have OpenRotor. By the way, I'm using Whisper Flow only, okay? I can use Whisper Flow even inside Cloud Code.

[01:19:11] - [01:19:15]

Dileep Karri: Okay, it is saying Gemini 3.1 doesn't exist yet.

[01:19:15] - [01:19:27]

Dileep Karri: Okay, and it is saying, open router's latest is Gemini 2.5 Pro, so whenever you're facing such kind of things, right, always a good idea.

[01:19:27] - [01:19:29]

Dileep Karri: To check, double check again.

[01:19:30] - [01:19:38]

Dileep Karri: So I'll go to... I'm now going to Open Router to actually check if what it is saying is true or not. I'll go to Models.

[01:19:38] - [01:19:44]

Dileep Karri: And in models, I will search... Gemini?

[01:19:44] - [01:19:48]

Dileep Karri: Okay, there is Gemini 3.1 Pro preview.

[01:19:49] - [01:19:52]

Dileep Karri: So what I'll do is, I will copy this.

[01:19:53] - [01:19:55]

Dileep Karri: And I'll go back to anti-gravity.

[01:20:00] - [01:20:01]

Dileep Karri: I'll see it.

[01:20:02] - [01:20:04]

Dileep Karri: I see.

[01:20:04] - [01:20:05]

Dileep Karri: Gemini?

[01:20:06] - [01:20:10]

Dileep Karri: 3.1 in anti... Gravity.

[01:20:12] - [01:20:14]

Dileep Karri: Sorry, not anti-gravity, open rotor.

[01:20:26] - [01:20:40]

Dileep Karri: Okay, Grok also, it is saying the same thing. Let me check if I have a different Grok variant. So let me search for Grok. So there is always this entire thing to do, so Grok 4.2...

[01:20:40] - [01:20:44]

Dileep Karri: is present, so I will ask it to use Grok 4.2.

[01:21:02] - [01:21:03]

Dileep Karri: Okay?

[01:21:04] - [01:21:07]

Dileep Karri: The stack is... Good.

[01:21:08] - [01:21:11]

Dileep Karri: I want to... I want you...

[01:21:16] - [01:21:22]

Dileep Karri: Okay? Round 3 trigger, or only when you click the trigger, I'll say round 3 trigger is auto-fire.

[01:21:32] - [01:21:38]

Dileep Karri: See, stack is good, I don't know, right? I really don't know, but I know that, you know,

[01:21:38] - [01:21:44]

Dileep Karri: I would, you know, kind of create whatever I require, so I just go with my gut.

[01:21:52] - [01:22:04]

Dileep Karri: So now, what is going to happen is, it is going to build the PRD for us. So, based on what we have talked so far, it is going to build the product requirements document for us to build.

[01:22:16] - [01:22:29]

Dileep Karri: Okay, so we can take a quick 5-minute break now, because it is going to build the PRD. I'll keep the screen on so that you can see how the PRD is built, and within the next 5 minutes, we will resume the session.

[01:22:38] - [01:22:42]

Dileep Karri: So I know session is quite heavy, so let's take a quick break.

[01:27:44] - [01:27:45]

Dileep Karri: Folks, are you back?

[01:27:48] - [01:27:52]

Dileep Karri: For those who are asking why mute, I mentioned that we are going on a 5-minute break.

[01:27:57] - [01:28:00]

Dileep Karri: Alright, so what has happened so far?

[01:28:00] - [01:28:11]

Dileep Karri: We have created a PRD. We will check on it what needs to be done. So, it has built up everything. Now, it is asking us to kick off the next step.

[01:28:12] - [01:28:23]

Dileep Karri: But before we do anything, what we'll do is, we will check on our PRD, okay? We will check on the PRD. So, in the file, we have the PRD that is ready, so I'll open this PRD, right?

[01:28:24] - [01:28:29]

Dileep Karri: Okay? So that is the idea behind using anti-gravity, because anything that I want

[01:28:30] - [01:28:35]

Dileep Karri: I would, kind of love to check how it is, etc.

[01:28:36] - [01:28:41]

Dileep Karri: So, the summary is, it is a web app that sends a single user prompt.

[01:28:42] - [01:28:53]

Dileep Karri: Has them debate each other, uses Claude 4.6 as a synthesizer to produce a final verdict with side-by-side comparison table. So, so far, so good.

[01:28:54] - [01:29:05]

Dileep Karri: Okay, the context is the user has to manually open four tabs, paste the same prompt, mentally compare answers, slow, lossy, and there is no structured debate.

[01:29:05] - [01:29:15]

Dileep Karri: Open Router exposes all four target models behind one compatible API. Okay, so this is also done.

[01:29:15] - [01:29:21]

Dileep Karri: Then, what are the key results? End-to-end debate, 100% of runs.

[01:29:21] - [01:29:25]

Dileep Karri: So on, so forth. So it is up to you to kind of go through

[01:29:26] - [01:29:34]

Dileep Karri: With, you know, whatever, it is there. So, market segment, value proposition, the gains.

[01:29:35] - [01:29:41]

Dileep Karri: Right? The user, UX flow. It has even built a kind of a text

[01:29:42] - [01:29:44]

Dileep Karri: Wireframe that it has built.

[01:29:44] - [01:29:48]

Dileep Karri: Which you can, kind of figure out and use.

[01:29:50] - [01:29:59]

Dileep Karri: Okay, the verdict table, and the technology that is there, everything is good, and so on and so forth, okay?

[01:29:59] - [01:30:02]

Dileep Karri: So far, so good. Everything is...

[01:30:02] - [01:30:05]

Dileep Karri: You know, pretty, decent overall.

[01:30:10] - [01:30:19]

Dileep Karri: Karthik, can you check that? I think somebody's saying that, app timer dialogue blocks is blocking the screen. Maybe you can just remove it or close it, I think it should go away.

[01:30:19] - [01:30:21]

Kartik Outskill: I will check. I have removed it.

[01:30:23] - [01:30:26]

Dileep Karri: You can remove it from your end, directly.

[01:30:34] - [01:30:38]

Dileep Karri: Yeah, there's an ignore button. You can just say ignore.

[01:30:44] - [01:30:50]

Dileep Karri: So it is something on the participant end, not the host end, you have to ignore it from the participant end, okay?

[01:30:50] - [01:30:51]

Dileep Karri: Alright.

[01:30:58] - [01:31:00]

Dileep Karri: Alright, so let's get into it.

[01:31:04] - [01:31:10]

Dileep Karri: Folks who are not able to figure it out, you can rejoin back, but I'm going to move ahead with this.

[01:31:11] - [01:31:12]

Dileep Karri: Okay?

[01:31:12] - [01:31:13]

Dileep Karri: Cool.

[01:31:16] - [01:31:34]

Dileep Karri: Alright, so now I have this PRD which has been built with this skill. Now I'm going to do the next steps. Before that, one thing I need to solve is the design part, okay? I need to kind of give it a good design, so that the best components, the best look it is.

[01:31:34] - [01:31:44]

Dileep Karri: going to use. So, I will use my, design, part to kind of figure that part out, so I will use that. So, for design.

[01:31:46] - [01:31:52]

Dileep Karri: So, for design, again, I will have to go back and check the right designs available.

[01:31:52] - [01:31:57]

Dileep Karri: So, my usual go-to is something called superdesign.dev.

[01:31:57] - [01:31:59]

Dileep Karri: I'll do that.

[01:31:59] - [01:32:02]

Dileep Karri: Tomorrow, I'll show you one more thing which I use, okay?

[01:32:03] - [01:32:09]

Dileep Karri: there is superdesign.dev, and I can go and check which is the platform

[01:32:09] - [01:32:17]

Dileep Karri: That I could use. I want a very clean, minimalist kind of a thing. That is the, thing I would use.

[01:32:17] - [01:32:21]

Dileep Karri: So I think this is good. This is very clean and minimalist.

[01:32:22] - [01:32:25]

Dileep Karri: This is nice, so I will use this proc.

[01:32:25] - [01:32:28]

Dileep Karri: So there is something called usePrompt, sorry.

[01:32:28] - [01:32:36]

Dileep Karri: But there is something called Copy Prompt over here. I just have to go and copy that particular prompt from SuperDesign.

[01:32:37] - [01:32:41]

Dileep Karri: Alright, now that I have done that, I'll come back to anti-gravity.

[01:32:43] - [01:32:44]

Dileep Karri: So...

[01:32:47] - [01:32:50]

Dileep Karri: I'm opening my Cloud terminal.

[01:32:54] - [01:32:57]

Dileep Karri: here, and I'll say...

[01:33:01] - [01:33:10]

Dileep Karri: Okay? So basically, what I'm telling is... Add these design... considerations.

[01:33:11] - [01:33:14]

Dileep Karri: to my... PR.

[01:33:14] - [01:33:31]

Dileep Karri: So, I have given some particular design considerations. I said, add the design considerations to my PRD, and yes, SuperDesign is absolutely free. It is a free tool that you can use, where it will tell you the different things that are there. We can

[01:33:32] - [01:33:34]

Dileep Karri: Kind of go ahead with that.

[01:33:48] - [01:34:02]

Dileep Karri: Okay, so now what it is doing is, it is actually, building a design system in my PRD for my model console. So what our model console is going to get built, it is going to follow this design system.

[01:34:17] - [01:34:24]

Dileep Karri: Okay, now it is ready to proceed. I will say, okay, now... Good to go for.

[01:34:25] - [01:34:37]

Dileep Karri: Next step. So right now, we just built the product requirements document. We have used the product requirements document, and everything has been done by Cloud Code only. We didn't write anything manually.

[01:34:37] - [01:34:43]

Dileep Karri: Okay, everything cloud code only has been doing so far. Now, good to go for the next step.

[01:34:57] - [01:35:00]

Dileep Karri: Something happened, it's okay, we can fix it.

[01:35:18] - [01:35:20]

Dileep Karri: Some trouble, let me see.

[01:35:38] - [01:35:44]

Dileep Karri: Okay, I think something happened on the cloud side, it's okay, we'll just debug it a little bit. Usually.

[01:35:44] - [01:35:48]

Dileep Karri: So usually when it happens, right, it is good to just...

[01:35:50] - [01:35:52]

Dileep Karri: I'll try to log in again.

[01:35:59] - [01:36:03]

Dileep Karri: I'm trying to log in again to see if there is some problem over there.

[01:36:07] - [01:36:09]

Dileep Karri: Okay, something has happened to Claude.

[01:36:14] - [01:36:17]

Dileep Karri: Okay, something has happened on the Claude's end.

[01:36:17] - [01:36:21]

Dileep Karri: So that's why we are facing this issue.

[01:36:27] - [01:36:29]

Dileep Karri: Let me give it another...

[01:36:33] - [01:36:34]

Dileep Karri: Trying?

[01:37:05] - [01:37:09]

Dileep Karri: No worries, I'll try for 2 minutes, otherwise you'll switch to anti-gravity.

[01:37:15] - [01:37:17]

Dileep Karri: I think some problem on the Claude side.

[01:37:17] - [01:37:26]

Dileep Karri: Okay? So, no worries, we will switch to anti-gravity. So that is a good thing. We have our PRD more or less ready.

[01:37:26] - [01:37:31]

Dileep Karri: Okay? So let me do a quick recap, so that everybody is...

[01:37:31] - [01:37:38]

Dileep Karri: clear, and I see some posts from people saying it is going tangential. I warned you.

[01:37:38] - [01:37:48]

Dileep Karri: Okay, I warned you very clearly that, you know, that, you are... this is going to be a little different session, so...

[01:37:48] - [01:37:50]

Dileep Karri: You have to be patient for that.

[01:37:50] - [01:37:59]

Dileep Karri: I think something happened, I think in Dubai, in US, a lot of places, Claude has gone down, so that's fine. So let us quickly recap what we have done so far.

[01:38:03] - [01:38:11]

Dileep Karri: Right? Number one, we talked about Claude code and anti-gravity. We said that

[01:38:11] - [01:38:22]

Dileep Karri: We are going to do model console, where we can set it up ourselves. Then we saw terminal basics, we saw anti-gravity, we saw Claude Code with,

[01:38:22] - [01:38:31]

Dileep Karri: extensions. So, basically, what we're doing is, anti-gravity is our editor, where we can see the files, we can see the folders, we can check the files.

[01:38:32] - [01:38:40]

Dileep Karri: We can check the code, etc. And Claude Code is our executor, or our agent, on which we are going to.

[01:38:41] - [01:38:43]

Dileep Karri: Work on these things.

[01:38:43] - [01:39:01]

Dileep Karri: Okay? And one main problem, as I said, is we cannot be the best program, best product manager, or the engineering manager, and there is a knowledge gap, and that knowledge gap, we are going to check with skills and, recipes. Skills and MCPs. Skills means recipes, MCPs are the tools.

[01:39:01] - [01:39:03]

Dileep Karri: And the chef is Claude Cole.

[01:39:04] - [01:39:12]

Dileep Karri: See, don't ask me questions on why we are doing a particular way, what is better, what is not better, etc.

[01:39:12] - [01:39:23]

Dileep Karri: I leave it up to your experimentation. What I'm doing is, I'm showing you a system that I use, that I will work, and other parts is something you can figure out.

[01:39:23] - [01:39:34]

Dileep Karri: I told you this multiple times, why this, why not that? It is exactly the same, of course, as asking why this pizza do you like? Why not the other pizza? Okay? It's a matter of taste.

[01:39:38] - [01:39:46]

Dileep Karri: Okay? Somebody is asking, did Trump shut down Claude? I don't think so. I don't think he can shut it down so easily.

[01:39:48] - [01:39:57]

Dileep Karri: All right, so skills, recipes, and we are trying to do this. So what we have done so far is, we went to a PM skills

[01:39:59] - [01:40:06]

Dileep Karri: section. Then we, kind of installed those... some of the skills which are useful.

[01:40:07] - [01:40:24]

Dileep Karri: And these skills, I installed only local repository. That means only within model console, those skills are available, those skills are not available across Claude, because I have a different setup, I don't want this setup to clash with that setup.

[01:40:24] - [01:40:30]

Dileep Karri: That's why I have installed the skills on a local repository. Tomorrow, I will talk about my original setup.

[01:40:31] - [01:40:41]

Dileep Karri: Then, I brainstormed with it and created the PRD, the product requirements document, and then we are trying to do that.

[01:40:46] - [01:40:54]

Dileep Karri: Okay? So, PM skills, installed the skills, created the PRD, then fourth step, what I had done is, I went to Super Design.

[01:40:56] - [01:40:58]

Dileep Karri: And I got a design system.

[01:41:01] - [01:41:06]

Dileep Karri: Now, from here on, we have to actually start the building.

[01:41:08] - [01:41:11]

Dileep Karri: Okay, that is exactly what we are trying to do.

[01:41:12] - [01:41:16]

Dileep Karri: Let us check one more time to see what's happening.

[01:41:46] - [01:41:49]

Dileep Karri: If it doesn't happen, we'll switch it up too.

[01:41:49] - [01:41:52]

Dileep Karri: The... Claudia, I think it's...

[01:41:53] - [01:41:58]

Dileep Karri: not going to get fixed. Let us switch to... Anti-gravity itself.

[01:42:00] - [01:42:02]

Dileep Karri: Alright, nothing to worry.

[01:42:02] - [01:42:09]

Dileep Karri: We have our PRD ready, okay? We have our PRD ready, we can still salvage this. So now is the time

[01:42:10] - [01:42:12]

Dileep Karri: to open our agent manager.

[01:42:15] - [01:42:17]

Dileep Karri: So, I open the agent manager.

[01:42:17] - [01:42:22]

Dileep Karri: And so I am opening this on Model Console.

[01:42:23] - [01:42:31]

Dileep Karri: Okay? I've opened my agent manager, and I'm going to model console, and I'm going to run my stuff.

[01:42:32] - [01:42:34]

Dileep Karri: Because somebody's saying it is back.

[01:42:37] - [01:42:40]

Dileep Karri: I think it's going to come back a little bit...

[01:42:47] - [01:42:48]

Dileep Karri: I'll just say, are you back?

[01:43:05] - [01:43:08]

Dileep Karri: I think it's going to come back in another 2 minutes.

[01:43:09] - [01:43:15]

Dileep Karri: It's okay, I'll start, continue to build in the agent builder, and then come back and resume it.

[01:43:15] - [01:43:17]

Dileep Karri: Overall, okay?

[01:43:42] - [01:43:47]

Dileep Karri: I think ours will take some more time, so I'll not delay, and...

[01:43:48] - [01:43:56]

Dileep Karri: Continue from here. So, I'll open Agent Manager. I am in Model Console. I will say, Go through the...

[01:43:57] - [01:44:00]

Dileep Karri: fires... And catch up.

[01:44:02] - [01:44:04]

Dileep Karri: what is... Happening.

[01:44:11] - [01:44:19]

Dileep Karri: Okay, so I'm now telling it, to catch up on the files, so now it is analyzing the model console for me.

[01:44:29] - [01:44:34]

Dileep Karri: Okay, I'll open the editor, I will... Fair enough.

[01:44:35] - [01:44:36]

Dileep Karri: Bring this down.

[01:44:37] - [01:44:45]

Dileep Karri: And, I'll open... The agent, so the agent is also here.

[01:44:47] - [01:44:48]

Dileep Karri: Right?

[01:44:52] - [01:44:58]

Dileep Karri: So here, what I'll do is, I'll show you some interesting things. I can do some customization.

[01:44:58] - [01:45:03]

Dileep Karri: Okay? And I can even add some agent skills also.

[01:45:04] - [01:45:09]

Dileep Karri: So, workflows is nothing but skills that I can use, so I can add some skills

[01:45:10] - [01:45:12]

Dileep Karri: Over here, if required.

[01:45:12] - [01:45:17]

Dileep Karri: But for now, not required. We can go back to the agent and continue working from here.

[01:45:18] - [01:45:25]

Dileep Karri: Alright, so I'll say... Go through the... PRD... file.

[01:45:26] - [01:45:27]

Dileep Karri: I heard?

[01:45:28] - [01:45:32]

Dileep Karri: Pick the rest of the... Process...

[01:45:32] - [01:45:35]

Dileep Karri: And what I'm going to do intelligently is...

[01:45:39] - [01:45:44]

Dileep Karri: I will go here, and I'll tell exactly what I have been using so far.

[01:45:45] - [01:45:47]

Dileep Karri: Okay? So there has been this...

[01:46:21] - [01:46:33]

Dileep Karri: So what I'm doing this is install these skills I have been... Using... Before... Claude.
Boss.

[01:46:33] - [01:46:34]

Dileep Karri: interrupted.

[01:46:38] - [01:46:39]

Dileep Karri: Yes.

[01:46:45] - [01:46:47]

Dileep Karri: In the meanwhile, we'll check if...

[01:47:26] - [01:47:27]

Dileep Karri: So, this is back.

[01:47:30] - [01:47:34]

Dileep Karri: So I'll stop it for now, but that is how I could use it, okay?

[01:47:35] - [01:47:38]

Dileep Karri: So now it is saying that it is back.

[01:47:38] - [01:47:39]

Dileep Karri: Good to know.

[01:47:47] - [01:47:57]

Dileep Karri: So even if we are using this, right, sometimes... because the anti-gravity does not know the skills are installed, so sometimes you'll have to install that, okay? So...

[01:47:57] - [01:48:00]

Dileep Karri: Now it has installed all of this, so, but...

[01:48:00] - [01:48:08]

Dileep Karri: we could use it wherever you want, okay? I just did it for some safety purpose, but the skills are installed locally itself.

[01:48:13] - [01:48:19]

Dileep Karri: Anti-gravity is not having its own model, you are using Gemini behind anti-gravity.

[01:48:27] - [01:48:31]

Dileep Karri: And, by the way, there is one nice command call, by the way.

[01:48:31] - [01:48:37]

Dileep Karri: Where I can ask, can you tell me... what is... Happening.

[01:48:42] - [01:48:48]

Dileep Karri: So, as it is writing over here, it will tell me the answer of my question.

[01:48:57] - [01:49:15]

Dileep Karri: Okay, so it is telling me the PRD is done, the assumptions Model Council is also done, where it is telling me a risk scan, it is going to do all verifications and everything. What is next to do this? So I can check on the assumptions.

[01:49:16] - [01:49:19]

Dileep Karri: It is telling me value, if it is going to be usable.

[01:49:19] - [01:49:33]

Dileep Karri: whether it is viable, it is worth running, what is the feasibility, what are the ethics, what is the go-to market, etc, etc. So it is telling you all of the things, right, that we can do.

[01:49:34] - [01:49:35]

Dileep Karri: Okay?

[01:49:36] - [01:49:52]

Dileep Karri: So we have the assumptions also written. So, assumptions is something like you are debating whether should I build this app, should I launch this app, what should I do with this app? Those are the kind of things you are doing, so that is exactly what it is.

[01:49:52] - [01:49:53]

Dileep Karri: I will say...

[01:50:07] - [01:50:09]

Dileep Karri: is happening.

[01:50:12] - [01:50:13]

Dileep Karri: Sad.

[01:50:13] - [01:50:14]

Dileep Karri: Let's start.

[01:50:15] - [01:50:16]

Dileep Karri: Building.

[01:50:21] - [01:50:29]

Dileep Karri: So I did not add any assumption skill, it is part of those PM skills we had installed. So it is taking that process and trying to figure it out.

[01:50:34] - [01:50:37]

Dileep Karri: If it is doing anything, it is...

[01:50:37] - [01:50:48]

Dileep Karri: definitely, you know, using everything, okay? So don't think that if I'm chatting, is it not using tokens? You can see here, 7% of tokens is being used.

[01:51:00] - [01:51:08]

Dileep Karri: Okay? So this is the point wherein it is saying, open router API key, okay? So I will say.

[01:51:08] - [01:51:19]

Dileep Karri: before you do anything like an open router API key, I will tell create the... dot ENV file.

[01:51:20] - [01:51:26]

Dileep Karri: I will place the... Open Router E.

[01:51:27] - [01:51:28]

Dileep Karri: Myself...

[01:51:32] - [01:51:33]

Dileep Karri: and intimate.

[01:51:36] - [01:51:48]

Dileep Karri: Okay, try to avoid keeping your key in the chat, okay? Just to be on the safe side. I will say create the .env file, I will place the open router key myself.

[01:51:48] - [01:51:58]

Dileep Karri: And I'll say yes. So now it is going to create for me the .env file for me to build. So you see, there's a .app folder that has been built.

[01:51:58] - [01:52:05]

Dileep Karri: Over here, it will tell me... where I can put my... EMV.

[01:52:21] - [01:52:31]

Dileep Karri: So typically, I would change the model from Opus to SONET, but today, because there are some disruptions, I don't want to kind of touch it, but you can change it overall.

[01:52:42] - [01:52:48]

Dileep Karri: You see here, it is creating the plan and everything, and it is going to set it up all.

[01:53:01] - [01:53:05]

Dileep Karri: So, all this code is being written locally on my machine.

[01:53:12] - [01:53:13]

Dileep Karri: Good.

[01:53:15] - [01:53:16]

Dileep Karri: So now, is the...

[01:53:17] - [01:53:30]

Dileep Karri: time, it'll keep asking me questions, so always good to verify and check that. There is another command I'll show you tomorrow, wherein you don't... it will not interrupt you or anything, it will just go ahead and build the stuff.

[01:53:34] - [01:53:41]

Dileep Karri: So, you can always check the tokens. As it is writing more and more code, you will see these tokens getting used.

[01:54:24] - [01:54:28]

Dileep Karri: Okay, as it is building, let me take a few questions.

[01:54:28] - [01:54:33]

Dileep Karri: For people asking deployment on the cloud, I will talk towards the end.

[01:54:34] - [01:54:35]

Dileep Karri: Okay?

[01:54:35] - [01:54:47]

Dileep Karri: See, I am showing you one model, which is Claude Code plus anti-gravity. If you want to go pure anti-gravity with Google Ultra, that is also an option. There are multiple options for you to use.

[01:54:51] - [01:54:59]

Dileep Karri: So, this token usage you're seeing bottom, it is a very different setup. I'll talk about it tomorrow, because it's slightly advanced.

[01:55:07] - [01:55:10]

Dileep Karri: How much amount do we pay for thousand,

[01:55:10] - [01:55:17]

Dileep Karri: tokens. Again, it depends. It depends on the usage. It is...

[01:55:17] - [01:55:32]

Dileep Karri: Again, based on the tokens, I don't know the exact number, to be very honest. It depends on how Claude feels at that particular point in time, so I really don't know, but if you're doing an extreme coding task.

[01:55:33] - [01:55:39]

Dileep Karri: on your \$20 model, you would exhaust the tokens quite, easily. So...

[01:55:39] - [01:55:42]

Dileep Karri: The best way to kind of keep checking is...

[01:55:42] - [01:55:51]

Dileep Karri: You know, check your usage below. You know that if your usage below here is not too much, you are on the right track.

[01:55:56] - [01:56:00]

Dileep Karri: So, this percentage is the current session, it is not across my usage.

[01:56:10] - [01:56:17]

Dileep Karri: So, for some people asking, can I build a PRD outside and save up on tokens? Absolutely, you can.

[01:56:17] - [01:56:29]

Dileep Karri: But I prefer to build it inside only, because anytime something happens, my anti-gravity can pick it up from here. So that's why I'd like to prefer to build everything within here itself.

[01:56:46] - [01:56:49]

Dileep Karri: Okay, I think, we are almost there.

[01:56:57] - [01:57:02]

Dileep Karri: The only thing remaining is, I will have to add my open router key.

[01:57:13] - [01:57:21]

Dileep Karri: So a lot of your work is to kind of look at all of this and, you know, try to give it permissions. Tomorrow, I'll tell you

[01:57:21] - [01:57:24]

Dileep Karri: How you can bypass these functions.

[01:57:51] - [01:58:00]

Dileep Karri: Okay, as you can see here, my app is ready, wherein I have built my all the apps.

[01:58:01] - [01:58:05]

Dileep Karri: Now, what it is telling me is, It is telling me that...

[01:58:06] - [01:58:16]

Dileep Karri: on .env.local, I have to replace the key with the real open router key, start the server, etc. Okay? So first, let us set up the open router key.

[01:58:21] - [01:58:25]

Dileep Karri: So, here... First, let us look at gitignore.

[01:58:26] - [01:58:33]

Dileep Karri: Okay, gitignore is very, very important. What all files are... Getting ignored, okay?

[01:58:33] - [01:58:34]

Dileep Karri: So, it is good.

[01:58:36] - [01:58:42]

Dileep Karri: env files are ignored, so I have to put the API key over here.

[01:58:42] - [01:58:53]

Dileep Karri: Okay? So now, for putting the API key, I'm going to stop sharing my screen. Can anybody guess why I've stopped sharing my screen when I'm putting the open router key?

[01:58:57] - [01:58:58]

Dileep Karri: Okay, simple question.

[01:59:01] - [01:59:02]

Dileep Karri: Right.

[01:59:02] - [01:59:04]

Dileep Karri: People are smart, they have gotten it.

[01:59:13] - [01:59:22]

Dileep Karri: Questo... So... I'm creating an API key. Again, API key I can create in open router only.

[01:59:22] - [01:59:31]

Dileep Karri: Right, so I'll say... Modern... 1, 2... Hey, everyone?

[01:59:40] - [01:59:41]

Dileep Karri: Okay?

[01:59:43] - [01:59:50]

Dileep Karri: So, I have gotten the key, API key, from my open router. That, I'm going to put it in the

[01:59:51] - [01:59:56]

Dileep Karri: environment slash local, and I'm going to save it.

[02:00:08] - [02:00:13]

Dileep Karri: All right, so I think now is a good time to start sharing my screen again.

[02:00:18] - [02:00:21]

Dileep Karri: So, I have added the API key.

[02:00:22] - [02:00:29]

Dileep Karri: I added the API key, Now, start the dev.

[02:00:30] - [02:00:31]

Dileep Karri: Servant.

[02:00:34] - [02:00:39]

Dileep Karri: So I said I added the API key. I am asking Itole to start the dev server.

[02:00:53] - [02:00:56]

Dileep Karri: Okay, so this is the one, movement of truth.

[02:00:56] - [02:00:58]

Dileep Karri: Let us open it.

[02:01:07] - [02:01:10]

Dileep Karri: Okay, our model console is ready.

[02:01:11] - [02:01:20]

Dileep Karri: Okay, this is a model council, one prompt, four models, structured debate, one final verdict, synthesized by Claude4.6.

[02:01:21] - [02:01:30]

Dileep Karri: So, ask the model council anything. So, let me ask... is Claude... Better.

[02:01:31] - [02:01:31]

Dileep Karri: What?

[02:01:32] - [02:01:40]

Dileep Karri: anti-gravity Okay, and I'll say... convene the council.

[02:01:43] - [02:01:46]

Dileep Karri: So, very neat format, as you can see.

[02:01:49] - [02:01:51]

Dileep Karri: So, independent.

[02:01:52] - [02:01:55]

Dileep Karri: If you see here, Claude code versus anti-gravity.

[02:01:55] - [02:02:00]

Dileep Karri: Claude's on it is saying these two are not really comparable.

[02:02:01] - [02:02:12]

Dileep Karri: Gemini 3.1 Pro is saying, Comparing is essentially comparing apples To either a physics-defying concept.

[02:02:12] - [02:02:17]

Dileep Karri: Grok 4.2 is saying cloud code is significantly better than anti-gravity.

[02:02:18] - [02:02:22]

Dileep Karri: Short answer, GPT-5 is giving. This is round one.

[02:02:22] - [02:02:26]

Dileep Karri: Round 2, critique and update, where I agree with others.

[02:02:27] - [02:02:29]

Dileep Karri: GPT-5 is slow.

[02:02:30] - [02:02:32]

Dileep Karri: Gawk 4.2 has come.

[02:02:32] - [02:02:51]

Dileep Karri: So now, it is kind of agreeing with each of the models. It is agreeing, or where it is agreeing with other model, where it is disagreeing with other model, it is kind of checking the information of where each model is agreeing, where each model is disagreeing, so on and so forth.

[02:02:51] - [02:02:54]

Dileep Karri: That is the... Ping.

[02:02:55] - [02:03:01]

Dileep Karri: So, final statements is coming. Final statements, Claude is saying, of course, Claude code is better than anti-gravity.

[02:03:02] - [02:03:05]

Dileep Karri: Grok 4.2 is saying cloud code is better.

[02:03:06] - [02:03:10]

Dileep Karri: Gemini 3.1 is saying plot code is better.

[02:03:12] - [02:03:23]

Dileep Karri: Claude code is better for real soft work. If anti-gravity means the physics idea of the Python Easter egg, it went into a very different tangent. GPT-5 went into a different...

[02:03:23] - [02:03:25]

Dileep Karri: tangent.

[02:03:27] - [02:03:28]

Dileep Karri: Okay?

[02:03:32] - [02:03:36]

Dileep Karri: Right? So we have all the final statements that are there.

[02:03:40] - [02:03:41]

Dileep Karri: then...

[02:03:47] - [02:03:53]

Dileep Karri: This is the verdict. If you look here, where it is agreeing, where it is disagreeing, the confidence and the reasoning trace.

[02:03:58] - [02:04:11]

Dileep Karri: Okay? And we have been able to say that Gemini and Claude Sonnet argue anti-gravity is not a real software tool, and the other models hallucinated product descriptions, while Grok and GPT-5 treat anti-gravity,

[02:04:11] - [02:04:22]

Dileep Karri: as a plausible real product, and attempt substantive comparisons. This is a genuine factual disagreement about whether the, you know, the thing exists or not.

[02:04:24] - [02:04:41]

Dileep Karri: Okay? So there is some kind of hallucination that has happened, but this is exactly the model console that you have in, say, things like Perplexity. I'll show you the... how the Perplexity model console kind of looks like.

[02:04:42] - [02:04:45]

Dileep Karri: I don't... let me see if I have here...

[02:05:05] - [02:05:06]

Dileep Karri: Mmm...

[02:05:14] - [02:05:20]

Dileep Karri: So, I'll do the same thing here, is... Claude code better.

[02:05:22] - [02:05:23]

Dileep Karri: Anti-gravity.

[02:05:25] - [02:05:28]

Dileep Karri: And I will... book.

[02:05:28] - [02:05:30]

Dileep Karri: model console.

[02:05:30] - [02:05:31]

Dileep Karri: And I'll ask it to work.

[02:05:37] - [02:05:45]

Dileep Karri: Okay? So now the council is kind of checking on each of these, and they are going to figure this out.

[02:05:47] - [02:05:48]

Dileep Karri: Okay?

[02:05:49] - [02:06:00]

Dileep Karri: So now, one improvement I will typically do over here is I will add a web search to this, okay? Right now, it is kind of doing its search on

[02:06:01] - [02:06:14]

Dileep Karri: everything that its training had had, but I will kind of add a web search to it, okay? I'll try to use a web search API over here, and try to add that web search to this.

[02:06:17] - [02:06:18]

Dileep Karri: Okay, but in terms of...

[02:06:19] - [02:06:31]

Dileep Karri: the working of it, it has come out pretty good, I would say. I like this cursor part, it is fun to play with, and the UI is pretty good. It is pretty neat.

[02:06:31] - [02:06:33]

Dileep Karri: And we can use it.

[02:06:36] - [02:06:42]

Dileep Karri: We'll come back to this. In the meanwhile, what we'll do is... They will...

[02:06:44] - [02:06:50]

Dileep Karri: Let us check how much we have used in terms of the credits. It was \$9.67.

[02:06:50] - [02:06:53]

Dileep Karri: So, let us see how much credits it has consumed.

[02:06:55] - [02:07:02]

Dileep Karri: So, 9.41, so that means around .26 were used.

[02:07:03] - [02:07:10]

Dileep Karri: Okay? 0.26 were kind of used. So let me kind of make those changes.

[02:07:10] - [02:07:14]

Dileep Karri: I will say... It is decent.

[02:07:16] - [02:07:29]

Dileep Karri: But it hallucinated a lot because it didn't have access to the web search. Can I add some kind of a web search API to this? Can you suggest me some web search that I could add?

[02:07:36] - [02:07:42]

Dileep Karri: Okay? So I can decide which API to add, so I kind of would ask it to, you know, build this out.

[02:07:51] - [02:07:53]

Dileep Karri: Okay? So it is saying...

[02:07:54] - [02:08:01]

Dileep Karri: Best fit is, open router has a built-in web search baked into every model. You literally append online to the slug.

[02:08:02] - [02:08:11]

Dileep Karri: Okay, so it is saying if you append online, it will work. So, you know, Go ahead.

[02:08:11] - [02:08:18]

Dileep Karri: With the... Open router... implement... patient.

[02:08:27] - [02:08:34]

Dileep Karri: It is saying that open router is easy. If not open router, I can use EXA, Tavili, BraveSearch.

[02:08:35] - [02:08:37]

Dileep Karri: Or a bunch of other things.

[02:08:39] - [02:08:42]

Dileep Karri: I don't know why it keeps going to the top, anyways.

[02:08:43] - [02:08:48]

Dileep Karri: Okay, so it's asking me to use Open Router only, so I'm going to use Open Router directly.

[02:09:21] - [02:09:29]

Dileep Karri: Okay, I say... Do I have to... Restart.

[02:09:29] - [02:09:32]

Dileep Karri: Just refresh.

[02:09:33] - [02:09:38]

Dileep Karri: my, see, if I don't know, I can ask these questions.

[02:09:43] - [02:09:45]

Dileep Karri: Alright, so now...

[02:09:49] - [02:09:52]

Dileep Karri: I will go back... Pull mine.

[02:09:57] - [02:10:07]

Dileep Karri: Council. So you see here where the models agree, where the models disagree, unique discoveries, and comprehensive analysis. This is exactly what we are doing.

[02:10:07] - [02:10:21]

Dileep Karri: I'll refresh... model concert, and I'll say, so web search is on by default, is... plot code better.

[02:10:21] - [02:10:26]

Dileep Karri: I'll just add this thing called anti-gravity Bye.

[02:10:26] - [02:10:27]

Dileep Karri: Good.

[02:10:29] - [02:10:31]

Dileep Karri: I'll convene the council.

[02:10:36] - [02:10:37]

Dileep Karri: So, Anthropic?

[02:10:44] - [02:10:45]

Dileep Karri: Then GPT-5.

[02:10:46] - [02:10:50]

Dileep Karri: Then Gemini 3.1 Pro and Grok 4.2.

[02:11:22] - [02:11:24]

Dileep Karri: So I think round one is done.

[02:12:09] - [02:12:13]

Dileep Karri: Is it stuck? I think GPT-5 is having some problem. It is very slow today.

[02:12:20] - [02:12:25]

Dileep Karri: Okay, so... It has picked it all up.

[02:12:28] - [02:12:30]

Dileep Karri: Now, critique and update.

[02:12:36] - [02:12:51]

Dileep Karri: So, some people might feel like, you know, why are we doing this? Google can do, others can do, etc. I'm just trying to show you that this is a feature in Perplexity, okay? This is a feature in Perplexity, and this is exactly what

[02:12:53] - [02:12:54]

Dileep Karri: It will work, okay?

[02:12:55] - [02:13:03]

Dileep Karri: Perplexity is charging \$200 for this feature. I'm trying to tell you that if you are a builder, you can build that feature for yourself, and

[02:13:04] - [02:13:09]

Dileep Karri: For a fraction of that cost, right, you can actually use that feature yourself.

[02:13:10] - [02:13:21]

Dileep Karri: So, since you have been part of the AI programs, you are now builders, so you can build stuff yourself without relying too much on other people.

[02:13:31] - [02:13:34]

Dileep Karri: Okay, only our GPT-5 is the...

[02:13:35] - [02:13:43]

Dileep Karri: culprit. It is... we are waiting for it. Once it is done, I will wind it up by actually, you know, kind of,

[02:13:44] - [02:13:46]

Dileep Karri: putting this back to GitHub.

[02:14:11] - [02:14:14]

Dileep Karri: Okay, as it is happening, let us...

[02:14:15] - [02:14:18]

Dileep Karri: Check, so I can... **** somewhere.

[02:14:28] - [02:14:30]

Dileep Karri: Alright, so what I'll do is...

[02:14:33] - [02:14:38]

Dileep Karri: I will say... So far, good.

[02:14:39] - [02:14:51]

Dileep Karri: I would... like to... put this... Repo... And... GitHub.

[02:14:53] - [02:15:00]

Dileep Karri: don't... comment, PM... Skills?

[02:15:00] - [02:15:06]

Dileep Karri: Write a good read me... dot empties.

[02:15:08] - [02:15:20]

Dileep Karri: Okay, so final steps, what I'm trying to do is, we are saying that put this repo in GitHub, don't commit the PM skills. Now, if you have a GitHub repo, okay.

[02:15:20] - [02:15:23]

Dileep Karri: If you have a GitHub, repo.

[02:15:25] - [02:15:35]

Dileep Karri: what I would ask you to do is just put in your GitHub link, and ask Cloud Code to connect. Cloud Code will tell you the set of steps you need to do. You don't have to worry about that.

[02:15:39] - [02:15:41]

Dileep Karri: Okay, I'll say proceed.

[02:15:58] - [02:16:08]

Dileep Karri: So PM skills, I'm not committing because it is already available, so I don't want to commit skills which are already available on GitHub, so I don't want to do that.

[02:16:08] - [02:16:11]

Dileep Karri: Okay.env file will not get committed.

[02:16:18] - [02:16:32]

Dileep Karri: Okay, it's a Claude Code plugin, not part of the project, local state, then it is telling, you know, open the command palette and everything, so let me just check on gitignore, what all is...

[02:16:32] - [02:16:34]

Dileep Karri: not coming.

[02:16:39] - [02:16:39]

Dileep Karri: Yes.

[02:16:40] - [02:16:41]

Dileep Karri: Good.

[02:16:42] - [02:16:44]

Dileep Karri: ENV file, you should never write it.

[02:16:45] - [02:16:52]

Dileep Karri: Okay? Sometimes you have to instruct, it knows the thing that it should not do, but better to instruct.

[02:17:22] - [02:17:32]

Dileep Karri: So now it is checking if, all the ignore the important files are not getting committed. If you see it getting committed, you should

[02:17:32] - [02:17:46]

Dileep Karri: you know, kind of ensure that you are immediately deleting the files before you're making it properly. So, this is getting, so you see here, it is still ignored, so that is there, so it is good.

[02:17:57] - [02:18:07]

Dileep Karri: So if you're wondering whether to use Claude subscription or API, I think by a cloud subscription, they're giving a good amount of extra tokens, so that is always

[02:18:07] - [02:18:19]

Dileep Karri: important, so therefore, it is pretty important for you to understand that. If you do the API, there is a chance you might be using, a lot of other things.

[02:18:32] - [02:18:33]

Dileep Karri: Okay?

[02:18:35] - [02:18:37]

Dileep Karri: Right. So, public repo?

[02:18:40] - [02:18:45]

Dileep Karri: model... Console?

[02:18:50] - [02:18:55]

Dileep Karri: So I didn't use 13%, I'll tell you how much exactly I have used, so don't worry.

[02:19:15] - [02:19:17]

Dileep Karri: Okay? So, so far, so good.

[02:19:19] - [02:19:23]

Dileep Karri: Alright, so then what I'm going to do is, it is pushed.

[02:19:23] - [02:19:29]

Dileep Karri: So I have my model console over here, so let me just... Click it.

[02:19:36] - [02:19:43]

Dileep Karri: Right? My app, model console, what it is doing, the judge, how the debate works, it has been pushed.

[02:19:51] - [02:19:56]

Dileep Karri: So, we have built a model console from scratch on Cloud Code.

[02:19:56] - [02:20:00]

Dileep Karri: And everything is available, you can check it out.

[02:20:00] - [02:20:02]

Dileep Karri: Let me just go to the app.

[02:20:03] - [02:20:12]

Dileep Karri: In the app, yes, I have the... only the env.example, so it is absolutely no problem. It is public on GitHub.

[02:20:13] - [02:20:19]

Dileep Karri: Folks who want to kind of check it up, folks who want to build something on top of it, you are completely...

[02:20:20] - [02:20:21]

Dileep Karri: Free to do that.

[02:20:24] - [02:20:25]

Dileep Karri: Okay?

[02:20:27] - [02:20:48]

Dileep Karri: So now, if you want to kind of push it to some other place, like Vercel, etc, publishing, you can publish it on Vercel directly, Netlify directly. As long as you have the GitHub repo, Vercel or Netlify will take the GitHub repo, and you can install it online also. I'm not doing it because it'll kill my tokens.

[02:20:48] - [02:20:53]

Dileep Karri: So... You know, that is exactly what it is.

[02:20:58] - [02:20:59]

Dileep Karri: Alright.

[02:21:03] - [02:21:09]

Dileep Karri: Cool. So what I'm going to do is, I'm now going to, you know, kind of...

[02:21:09] - [02:21:11]

Dileep Karri: Take a roundup.

[02:21:12] - [02:21:22]

Dileep Karri: questions. By the way, I think one thing I forgot to show is, what is the usage, right? One usage I am supposed to show. So let me show the usage also.

[02:21:23] - [02:21:26]

Dileep Karri: So, I will do usage.

[02:21:27] - [02:21:42]

Dileep Karri: So, if you see, current session, I have used 28%, okay? So, within 5 hours, I used 28% of my session context, so that means I would have roughly tried to build 2-3 more features, and I would have been logged out.

[02:21:42] - [02:21:57]

Dileep Karri: Okay? And all models, I used 11%. It will reset again on April 19th. So I have used quite a bit of tokens, right? I am on the max plan, still quite a bit of tokens I have used.

[02:21:57] - [02:22:04]

Dileep Karri: Okay, so after some time, I will have to go back to Sonnet. Yes, it is the \$200 plan that I'm on.

[02:22:06] - [02:22:21]

Dileep Karri: Okay, so tomorrow, what we are going to do is, I'm going to go deeper into the advanced setup that I have. So today, I have been a little slow. I tried to show a few things only. I did not

[02:22:21] - [02:22:33]

Dileep Karri: go very deep into a lot of stuff. Tomorrow is when I will go directly deeper, so if any one of you kind of felt this session was a little bit...

[02:22:33] - [02:22:36]

Dileep Karri: Thing, but if you still want to see, you can still come.

[02:22:36] - [02:22:45]

Dileep Karri: Right? I would suggest you, I would strongly encourage you to come to that session, because you will actually see the possibilities of what can happen.

[02:22:47] - [02:23:00]

Dileep Karri: Right? So, that is exactly that. And for the people who have just finished your cohort, this is a different thing. Yesterday, your graduation was done. So, for some of you who just joined today, it's a very different

[02:23:01] - [02:23:09]

Dileep Karri: thing altogether. You don't have any workbook, you don't have anything else. Tomorrow, we are going to go very advanced into some cutting-edge stuff.

[02:23:09] - [02:23:19]

Dileep Karri: Okay? So that is, exactly what we will do. I think, Kartik, I think there is some problem with the invitation. Can you just check and see if it is all proper?

[02:23:21] - [02:23:22]

Kartik Outskill: Sure, I'll just check that out.

[02:23:22] - [02:23:30]

Dileep Karri: Okay? So tomorrow, what I'm going to cover is, I'm going to build a different app, but I'm going to do a very different skills.

[02:23:31] - [02:23:44]

Dileep Karri: that I'm going to set it up, okay? I will talk about what is my setup, what are the skills I use, how I do my orchestration, plus how I would do a setup.

[02:23:44] - [02:23:49]

Dileep Karri: other things. That's what I'm going to do, tomorrow.

[02:23:49] - [02:23:50]

Dileep Karri: Okay?

[02:23:51] - [02:24:04]

Dileep Karri: We will keep having sprints like this, that is what we'll do. We'll also talk... I'll also talk about a little bit of memory management in Cloud, that is exactly what we are going to do. And on terms of the questions, as I said.

[02:24:05] - [02:24:15]

Dileep Karri: I have picked a few questions, rushed to the questions is up to you for exploration. For people asking, can you show VS Code, can you show other platforms?

[02:24:15] - [02:24:29]

Dileep Karri: I would leave it to you to explore yourself. What... the same platform is used everywhere else. VS Code is like the... anti-gravity is like a clone of VS Code only, so more or less, everything is the same.

[02:24:33] - [02:24:49]

Dileep Karri: Okay? So figure it out yourself. You are now AI generalist, you should have to figure it out. We will, the sprints, you might expect that it'll happen once in 2 to 3 weeks. Once in 2 to 3 weeks is when you will have such sessions.

[02:24:59] - [02:25:19]

Dileep Karri: Okay? Cool. So tomorrow, we will go into... today was an intermediate session, tomorrow is the advanced session, okay? And eventually, we will pick up a few more topics, etc. And Karthik, I'll leave it up to you now to kind of show people how they can find the stuff, and then we will take it forward from there.

[02:25:19] - [02:25:30]

Kartik Outskill: Sure, thanks. Thanks, Dilip. Thanks for, for the session today. Folks, before we move into, the LMS setup, how you can find your recordings.

[02:25:30] - [02:25:41]

Kartik Outskill: and everything around LMS, I am launching a CSAC poll. Please help us out, by answering that, and let us know what you liked about it, and where we should improve.

[02:25:41] - [02:25:45]

Kartik Outskill: So, please do that, and can I please see?

[02:25:45] - [02:25:51]

Kartik Outskill: some love for what Dilip has done today. Can I please see what you felt about this session?

[02:25:54] - [02:25:58]

Kartik Outskill: Give me... okay, were your minds blown or not?

[02:25:58] - [02:26:01]

Kartik Outskill: Can I have MB in the chat if your minds were blown?

[02:26:05] - [02:26:11]

Kartik Outskill: Amazing. Amazing. This is what I expect. Great, great job, folks. Thanks for this.

[02:26:11] - [02:26:14]

Kartik Outskill: Thanks for sharing so much love.

[02:26:18] - [02:26:33]

Kartik Outskill: And, again, I'll check the timings out for tomorrow. If there would be any mismatch, I'll get it corrected. But remember, the session we are going to have tomorrow is going to be at the same time.

[02:26:34] - [02:26:38]

Kartik Outskill: And you will get... you already have the link for tomorrow's session.

[02:26:38] - [02:26:44]

Kartik Outskill: You will get it on your LMS, on your email, on your WhatsApp groups.

[02:26:44] - [02:27:08]

Kartik Outskill: As well as on your calendar, so don't worry. Just make sure to keep an eye on at least one of these places, and you will be good to join in this session. And do not miss out tomorrow. Tomorrow, what Dilip has shown today, we are going to go way beyond it tomorrow, so make sure not to miss that out. Thank you, Dilip, thanks for doing this session. I will be showing them.

[02:27:08] - [02:27:11]

Kartik Outskill: Anything you want to, say for today's session?

[02:27:11] - [02:27:12]

Kartik Outskill: doing this.

[02:27:19] - [02:27:26]

Kartik Outskill: Yes, folks, I will be talking about... I will be talking about recordings, don't worry. Allow... allow us two more minutes, we will be going back to that.

[02:27:26] - [02:27:32]

Dileep Karri: Cool, folks, I'll take your leave... I'll leave it to Karthik to show you the recordings and, all

[02:27:32] - [02:27:51]

Dileep Karri: of the other things, etc. I have given you a good foundation, now I want you to explore further. Tomorrow, it is going to be 7.30 p.m. IST, so convert it into your time zones. Karthik, I think there is some confusion. Ensure that the calendars are recent and the old calendars

[02:27:52] - [02:27:59]

Dileep Karri: reset, etc. Okay? So tomorrow, we will, do that, and I saw some questions around a few other things.

[02:28:00] - [02:28:06]

Dileep Karri: where people were asking some questions on, hey, something, something, something, right? I'll address that tomorrow.

[02:28:08] - [02:28:25]

Kartik Outskill: Thanks, thanks, Dilip, thanks for joining, and thanks for today's session. I will see you tomorrow. Folks, stay back if you are confused on how you can access the LMS and the recordings. I will be talking about it, in a... in a bit. Just,

[02:28:25] - [02:28:30]

Kartik Outskill: Give me a minute, I will start sharing my screen, and I'll start showing you.

[02:28:55] - [02:29:01]

Kartik Outskill: Okay, so firstly, for any... whenever you want to access recordings.

[02:29:01] - [02:29:07]

Kartik Outskill: You can either use the link that I have just pasted in the chat,

[02:29:09] - [02:29:12]

Kartik Outskill: And now, I will be sharing my screen, and I'll be showing you as well.

[02:29:13] - [02:29:29]

Kartik Outskill: So, the space that you all need to make sure to have a very keen eye on is called AI Masterclasses and Sprints, okay? On your left, once you open your LMS, that is platform.outskill.com.

[02:29:29] - [02:29:38]

Kartik Outskill: You will be able to see, on your left sidebar, AI Masterclasses and Sprints. There, you will see three...

[02:29:38] - [02:29:49]

Kartik Outskill: Three things, announcement, live sessions, and resources and recordings. If you will go to resources and recordings, this is the page that will open for you.

[02:29:49] - [02:29:55]

Kartik Outskill: And let's say if I open... open course Session 1, here is my recording.

[02:29:55] - [02:30:02]

Kartik Outskill: I have the transcript as well as the post-read material and session resources already available here.

[02:30:02] - [02:30:21]

Kartik Outskill: Similarly, you will have the same uploaded by tomorrow morning. Again, Zoom takes some time to generate the recording. So, once it gives us the recording by tomorrow morning, before 11AM, you will have your recording, as well as your,

[02:30:21] - [02:30:27]

Kartik Outskill: post-read material, and transcript uploaded over here, on the LMS.

[02:30:27] - [02:30:33]

Kartik Outskill: Similarly, you have your open clause session 2, transcript, post-read, session resources, everything is...

[02:30:33] - [02:30:45]

Kartik Outskill: already up there. For any announcements and any updates around these masterclasses and Sprints, you can just go to Announcements, you will see

[02:30:45] - [02:31:04]

Kartik Outskill: everything up here, like, I was talking about open claw sessions recording, today I started, I talked about, the AI Masterclass around cloud code is starting soon, and all the other communications, whatever I'll be having, I will be putting it up here as well.

[02:31:04] - [02:31:13]

Kartik Outskill: And if you want to just join the session, go to live sessions. You can see, we have our next session ongoing advanced into integrity with Cloud Code.

[02:31:13] - [02:31:17]

Kartik Outskill: And here, you can just go ahead and

[02:31:17] - [02:31:29]

Kartik Outskill: And join the session. So, all the things that we are talking about is already up there on your LMS. Now, there is one catch that could be.

[02:31:29] - [02:31:47]

Kartik Outskill: That catch is if you are able to see this space on your LMS or not, okay? If you are not able to see the space, check two things. First, check your email ID is correct or not, with which you have logged into the LMS.

[02:31:47] - [02:31:56]

Kartik Outskill: And second... second thing that you need to make sure is, if you're not already added, you must have received an email.

[02:31:56] - [02:31:59]

Kartik Outskill: Asking you to join this space.

[02:31:59] - [02:32:22]

Kartik Outskill: So just go ahead, find that email, try to find that email, if you are not finding it in inbox, try to find the same on your spam folder, and you will be good. You will, once you accept the invite, you will be able to join in this channel, you will be able to join in this space, and you will have the access to all the recordings and resource materials.

[02:32:24] - [02:32:31]

Kartik Outskill: I hope I was clear. Can I have clear in the chat if I was clear?

[02:32:37] - [02:32:39]

Kartik Outskill: Okay, thank you.

[02:32:42] - [02:33:02]

Kartik Outskill: Okay, most of the cases, I feel I was clear, and those, again, Naveen, as I said, I will be uploading it by tomorrow. Satya, if it was not clear, just try go platform.outskill.com, try to find a left sidebar space called AI Masterclasses and Springs.

[02:33:02] - [02:33:13]

Kartik Outskill: If you're not able to find that, go to your email and check for an invitation email from Outskill. Okay, once you will see that, if you are able to find that.

[02:33:13] - [02:33:22]

Kartik Outskill: Please make sure to check both inbox and spam. Most of the folks have already got that sorted. If you are able to find... if you find it, you will be able to log into it.

[02:33:23] - [02:33:25]

Kartik Outskill: So, just make sure to do that.

[02:33:30] - [02:33:49]

Kartik Outskill: Okay, folks, recordings will be uploaded by tomorrow morning only. Those who are saying no invitation email, folks, invitation email has been sent on 2nd of April, so please try to check that out, and you will be able to see that. Those who were from the recent,

[02:33:49] - [02:34:00]

Kartik Outskill: recent AI Excel data batch, you will be able to find it in a day or two, but don't worry, you will be able to access the resources.

[02:34:00] - [02:34:03]

Kartik Outskill: on your Accelerator LMS itself.

[02:34:03] - [02:34:07]

Kartik Outskill: That is it, I guess, from my side.

[02:34:08] - [02:34:17]

Kartik Outskill: Folks, how AI Catalyst can access this recording. Again, Siobhan, as I said, you will have the... you will have the space.

[02:34:17] - [02:34:18]

Kartik Outskill: on the left.

[02:34:25] - [02:34:36]

Kartik Outskill: Claude 101 Masterclass, folks, that is a different thing. This is a different thing. Can the videos and elements be available? No. No, Vishal. We will not be able to do that.

[02:34:43] - [02:34:52]

Kartik Outskill: Okay... Yes, Baliji, you will have it separately. What about...

[02:34:52] - [02:34:58]

Kartik Outskill: Have they been uploaded as of yet? Master of In session is a completely different thing. This is masterclass.

[02:34:59] - [02:35:13]

Kartik Outskill: I don't find it, neither the... Again, Dave, it is sent on 2nd of April, go find it. It has been shared with each and everybody. Please check if you are checking the correct email ID.

[02:35:16] - [02:35:24]

Kartik Outskill: Yes, for recent Accelerator participants, it will be... I will... it will... you will... you will see it, you will see this space in a day or two.

[02:35:27] - [02:35:30]

Kartik Outskill: Yes, Alexander is right...

[02:35:33] - [02:35:58]

Kartik Outskill: Cool! Thank you! Thanks, folks, thanks for joining in. Make sure not to miss out, to join tomorrow. I will be sharing the link of the... I will be sharing the joining link over your email, over your WhatsApp, over your calendars, as well as on the LMS. Make sure not to miss out. Vidushi, we are not doing Slido, we will not be doing Slido for today's session. We'll see if tomorrow the time permits, we'll do the Slido.

[02:35:58] - [02:36:06]

Kartik Outskill: Thanks, folks, thanks for joining in. Bye-bye, have a great day, have a great night, enjoy, keep learning, and I'll see you all tomorrow.
