

## **Live Session on Claude Code with Antigravity - Part 2**

**10:00 - 10:07**

Kartik Outskill: Hello! Hello, hello, hello! Good evening, good afternoon, good morning, people. How are you all doing?

**10:15 - 10:19**

Kartik Outskill: Amazing, amazing, amazing, good to see the responses.

**10:21 - 10:30**

Kartik Outskill: Great, great, great to see you all. Great to see the responses in the chat. Folks, thank you for joining in. Welcome to AI Masterclasses and Sprints by Outskill.

**10:30 - 10:53**

Kartik Outskill: And today, we are having our day two of Cloud Code with anti-gravity. And today, we will be going advanced into Cloud Code and Antigravity, yet till yesterday, we were doing... we have covered an intermediate till intermediate level. Today, we are going to deep dive into it, and we are going to see

**10:53 - 10:57**

Kartik Outskill: What all it can do for us.

**10:58 - 11:03**

Kartik Outskill: Can I have? Boom in the chat if you all are excited?

**11:03 - 11:06**

Kartik Outskill: for the same. Can I have boom in the chat?

**11:12 - 11:16**

Kartik Outskill: Amazing, amazing, great, great, great.

**11:17 - 11:42**

Kartik Outskill: Okay, folks, two... few things to remember for today's session. Again, it is not a do-it-along session. Try to take your notes, try to, try to note down your queries, and you can put it on chat during the session, by the end of the session. We will take few questions, not all, but we will definitely try and answer the most important

**11:42 - 11:53**

Kartik Outskill: important questions which are going to be there. And make sure that if you let your friends and peers also know that we are live.

**11:53 - 11:57**

Kartik Outskill: So that they can also join in and do not miss out on this session.

**11:57 - 12:08**

Kartik Outskill: Those who are having concerns with LMS, don't worry, wait till the end, post the session, I'll again give a walkthrough, so that you do not miss out on this.

**12:08 - 12:23**

Kartik Outskill: And, on this note, I would want to call in our mentor for today. You all know him, you all have seen him yesterday, you all have been seeing him for quite some time. He's none other than KVS Dilip with us. Hi, Dilip, how are you?

**12:26 - 12:27**

Dileep Karri: Hey, everyone!

**12:28 - 12:31**

Dileep Karri: Just a second, I'll turn on the AC, it is hot in Bangalore.

**12:31 - 12:32**

Kartik Outskill: Excuse me.

**12:37 - 12:38**

Dileep Karri: Yep.

**12:44 - 12:49**

Dileep Karri: All right, all right, thank you, thank you, everyone, for your kind, wishes.

**12:50 - 12:53**

Dileep Karri: Let's... Get to it.

**12:53 - 12:55**

Dileep Karri: Without any further ado...

**12:58 - 13:05**

Dileep Karri: So, before I kind of get into it, right, we will, talk about a few things.

**13:06 - 13:07**

Dileep Karri: Number one.

**13:07 - 13:22**

Dileep Karri: Okay? If, in case you missed yesterday's session, in case you missed yesterday's session, think of this session as parts of the Marvel Cinematic Universe. Okay? What it means is, if you are

**13:23 - 13:36**

Dileep Karri: missing a particular movie, you can easily watch the other movie, and you can understand that movie, but if you watch the complete series, you get a better narrative.

**13:36 - 13:39**

Dileep Karri: That, you know, could be useful to you.

**13:39 - 13:47**

Dileep Karri: Okay, so in case you missed the session yesterday, right, don't worry about it. You should be able to

**13:48 - 14:06**

Dileep Karri: follow the session without having knowledge of the previous session out there, but one thing I want to make it extremely clear, especially for today's session, is that this is going to be in the advanced territory. I'm going to show you some things which are going to be quite powerful.

**14:07 - 14:18**

Dileep Karri: Okay? But that comes with the caveat that these are some things you will not be able to, you know, kind of go ahead and try to.

**14:19 - 14:42**

Dileep Karri: maybe get it on the first try, maybe, but you will understand, okay? As I said, these prints and master classes are coming, because we want to give knowledge without holding ourselves back, without any kind of constraint, and that's why some will be at a beginner level, some things we'll be able to understand about beginner level, and some will be intermediate, as well as the advanced.

**14:42 - 15:03**

Dileep Karri: Okay? Now, regarding the recording, the part one, you are not able to see, etc, and all that, we are aware of the issues, we are solving it one by one, okay? And you will have to give us that patience. This is, you know, we will ensure that you'll get it, but it's going to take a little bit of time, so kindly be patient as we kind of go ahead with that.

**15:04 - 15:10**

Dileep Karri: Alright, so let's go ahead and, you know, pick up from where we are.

**15:13 - 15:18**

Dileep Karri: And as, you, as I have mentioned before.

**15:19 - 15:23**

Dileep Karri: In these sessions, the sessions that we are

**15:23 - 15:33**

Dileep Karri: going to do. I will take questions very selectively. I will not be able to pick up... in fact, all of the sessions will not be able to pick up

**15:33 - 15:46**

Dileep Karri: all of the, you know, questions. The idea here is, I will keep an eye, but I'll take questions selectively, whatever I feel are the right questions to kind of pick up and answer.

**15:46 - 15:54**

Dileep Karri: Okay, a quick recap, a, you know, something like a recap of what we had done yesterday.

**15:54 - 16:06**

Dileep Karri: The quick recap is that we had gone into clot code plus anti-gravity, okay? And in the clod code plus anti-gravity, we have

**16:06 - 16:13**

Dileep Karri: Understood the basic fundamentals exactly with respect to, how do you set this up.

**16:13 - 16:30**

Dileep Karri: Mainly here, anti-gravity is just like a system for building, okay? We are not really going deep into anti-gravity, we are going to go deep into cloud code. Anti-gravity is just like our eyes to kind of look at the code.

**16:30 - 16:39**

Dileep Karri: Then, we are going to use Claude Code in the purest form, that is the terminal, okay? And Cloud Code is the agent to do all of

**16:39 - 16:51**

Dileep Karri: the tasks, whereas anti-gravity, it is to look at the FIR files as well as the backup. In case your cloud code is giving up, you will switch to anti-gravity.

**16:51 - 17:08**

Dileep Karri: We built something called Model Council, wherein we actually got multiple models to kind of talk to each other and debate amongst each other, and give us the final answer. So we tried to use anti-gravity for that.

**17:08 - 17:30**

Dileep Karri: So we used our model console, and we used Cloud Code to actually build this model console. You had seen that. I have seen some LinkedIn posts of folks who had actually built it, some folks who had already shared it with others to ask people to test it out. So, great work, everyone who has, you know, kind of done that. This session is

**17:31 - 17:38**

Dileep Karri: not for using, you know, in case of the... I'm not actually...

**17:39 - 17:54**

Dileep Karri: expecting you to do it along with me. This session is something you should do later on today. I'll do a little bit advanced stuff, but if somebody wants to do that, you're free to do that, but comes with a caveat, you might miss out on some things as I'm going ahead.

**17:54 - 18:00**

Dileep Karri: Okay? So, as I said, skills is the recipes, the playbook.

**18:00 - 18:08**

Dileep Karri: That you use for the chef, whereas MCP is the tools that you use to execute skills and the MCP together

**18:09 - 18:24**

Dileep Karri: is used by the chef, that is the plot code. Okay? And we installed this... a few of the skills over here, which is the PM skills. Let me put it out of the chat in case we... yesterday you missed it.

**18:24 - 18:27**

Dileep Karri: So, this is the skills that we have used.

**18:27 - 18:33**

Dileep Karri: So that you can use these skills to, you know, build a better product.

**18:33 - 18:42**

Dileep Karri: Today, we will see a few more skills and orchestration that we are going to do to actually, you know, do a bunch of all the checks.

**18:44 - 18:51**

Dileep Karri: Alright, so let's get going. One more resource for everybody is this resource called [CodingForMarketers.com](https://codingformarketers.com).

**18:51 - 18:57**

Dileep Karri: I am sharing this resource so that people can understand about the plot code.

**18:57 - 19:05**

Dileep Karri: Okay? So, now what I'm going to do is I'm going to talk to you about more skills.

**19:05 - 19:22**

Dileep Karri: And a different orchestration framework than what we had seen yesterday. Yesterday's orchestration framework was because I used the skills to kind of build a complete product, which was Model Console. Today, I will show you something that I actually use. What yesterday I showed you was...

**19:23 - 19:34**

Dileep Karri: Something that I don't use, I just wanted to show you that. Today's is something that I actually use, so that you can also figure it out and use it the way you want.

**19:37 - 19:38**

Dileep Karri: Okay?

**19:40 - 19:48**

Dileep Karri: Alright, so... Let's get... Started on this.

**19:49 - 19:54**

Dileep Karri: So today, what I'm going to do is, I'm going to explain to you about

**19:58 - 20:08**

Dileep Karri: Today, I'm going to... Explain to you about a imported file Claude.md, let me...

**20:13 - 20:19**

Dileep Karri: an important file called claud.md. How do you set it up?

**20:28 - 20:37**

Dileep Karri: Okay, we are looking at plot.md, how do you set it up, etc. That is exactly what we are, you know, kind of,

**20:37 - 20:45**

Dileep Karri: you know, setup. Then, some advanced skills...

**20:45 - 20:52**

Dileep Karri: And today, the app that we are going to build, okay, the app that we are going to build is a

**20:53 - 20:56**

Dileep Karri: sketch... to app.

**20:56 - 20:59**

Dileep Karri: That means I will do a sketch

**20:59 - 21:10**

Dileep Karri: Okay? I will do, like, a sketch, and I'm going to use that sketch to build a full-fledged app, something like a lovable clone.

**21:11 - 21:12**

Dileep Karri: Mark?

**21:12 - 21:14**

Dileep Karri: Lesser scope.

**21:16 - 21:25**

Dileep Karri: Something like a lovable clone, lesser scope, is what I will attempt to build with this, complete

**21:25 - 21:29**

Dileep Karri: orchestration of what I want to build right now.

**21:29 - 21:46**

Dileep Karri: Okay? Rules of the game, no tangential questions. I'm not going to go into any kind of tangential questions, so if you have got some other doubts which are maybe not so relevant to the questions, I'm not going to

**21:46 - 21:58**

Dileep Karri: go ahead and take them up, okay? So, that is one. And second thing is, I will take questions selectively from the chat. I'm not going to ask... answer any of the questions.

**21:58 - 22:07**

Dileep Karri: I will try to be slow, but know that this is an advanced session, so it will be slightly advanced for some of you, not all of you.

**22:08 - 22:26**

Dileep Karri: And when I'm doing this, okay, when I am trying to do this, if you are at any point feeling anxious that it is going over my head, don't feel anxious, watch back, absorb what it is, and maybe later on, when you revise it, it should get better.

**22:27 - 22:29**

Dileep Karri: Okay, so let's go into this.

**22:31 - 22:36**

Dileep Karri: So, we are going to build this lovable clone. So first, let me explain what...

**22:36 - 22:38**

Dileep Karri: Okay, it's become too bold.

**22:52 - 22:56**

Dileep Karri: So now we are going to use... or dot empty.

**22:57 - 23:09**

Dileep Karri: Okay? What Cloud.md does, it is like a... file, Which is... the knowledge... Always loaded.

**23:12 - 23:28**

Dileep Karri: Okay? That means it is like the master knowledge or the file. The master knowledge or the file that is always loaded whenever you are working with Cloud Code. So, any information, anything that you feel

**23:29 - 23:32**

Dileep Karri: Is relevant throughout the project.

**23:34 - 23:44**

Dileep Karri: something like... the... project rules, etc. You can put it inside this plot.md.

**23:44 - 23:54**

Dileep Karri: Okay, so plot.md is something that is always loaded whenever you're doing, so it is like a sticky... Peace...

**23:55 - 23:56**

Dileep Karri: text.

**23:59 - 24:01**

Dileep Karri: always there.

**24:02 - 24:06**

Dileep Karri: Another way to look at it is like a... preloaded.

**24:10 - 24:24**

Dileep Karri: It is not something that is going to be present throughout. The preloaded prompt is not something that is, it's not a rag or anything. Think of it like a prompt that is always copied along with your information.

**24:24 - 24:38**

Dileep Karri: Okay? So clot.md is an important file so that when you exit and you come back, clot.md tells what is the project status, what has happened, and then we can kind of go ahead with that.

**24:39 - 24:50**

Dileep Karri: Okay, so cloud.md, you have the file where the knowledge is always loaded, it's a sticky piece of text, always there. It is like a pre-loaded prompt that you can use.

**24:50 - 25:03**

Dileep Karri: Okay, so the way I kind of use clot.md, some people, you know, kind of have a different file called memory.md, which kind of tells exactly what is

**25:03 - 25:17**

Dileep Karri: used, okay? So, it is a good practice. It is not mandatory. Yesterday, we built it without this. It's always a good practice to set this file up, which is clot.md and memory.md.

**25:17 - 25:21**

Dileep Karri: Okay, so one of the best, Claude.md.

**25:22 - 25:29**

Dileep Karri: or the context that I have seen is by Andre Karpatay. Okay, Andrei Karpatay is one of the best

**25:30 - 25:34**

Dileep Karri: Persons who has done, you know, kind of...

**25:34 - 25:36**

Dileep Karri: It was a lot of AI research.

**25:37 - 25:41**

Dileep Karri: Okay, so we have Andrei Karpatay, who has kind of done this.

**25:41 - 25:48**

Dileep Karri: Alright? Now, please understand that this plot.md is something which is local for the project.

**25:48 - 26:02**

Dileep Karri: Okay, it is something local for the project. There are a bunch of others. There is agent.md, readme.md, etc, but I will focus only on clot.md and memory.md for my setup.

**26:02 - 26:06**

Dileep Karri: Okay, these are the two files that I'm going to use.

**26:07 - 26:19**

Dileep Karri: Okay? So now that I'm using this, this is something I will use for my project. I will not make it global. This is something that is at the project level. That is exactly what I would do.

**26:20 - 26:29**

Dileep Karri: So, things I have already done, I have already made an app called Sketch2App, a folder.

**26:31 - 26:37**

Dileep Karri: I have the Sketch2 app folder, which is completely empty currently. It's an empty folder.

**26:37 - 26:51**

Dileep Karri: That is present. So, Sketch2 app is an empty folder. From here on, I'm going to build stuff. So, step one, the first advanced configuration I'm going to do is, I'm going to set up my cloud.md.

**26:52 - 27:07**

Dileep Karri: and memory.md. This is the first setup. I'm going to set up my clot.md and memory.md. Cloud.md is, like, my system prompt or preloaded prompt, always.

**27:09 - 27:16**

Dileep Karri: Memory.md is my memory log. What has happened so far in the project?

**27:22 - 27:37**

Dileep Karri: Okay, so in case your tokens expire, anytime your tokens expire, when you restart, it would have forgotten the context. At that point in time, you can read clot.md, and it will also read memory.md to kind of catch up.

**27:37 - 27:39**

Dileep Karri: On what is happening.

**27:40 - 27:45**

Dileep Karri: Okay? Clear with clot.md and memory.md? Is this clear?

**27:46 - 27:47**

Dileep Karri: Everybody.

**27:52 - 27:55**

Dileep Karri: Alright, as always, 80-20 rule.

**27:55 - 27:59**

Dileep Karri: Okay? If 80% of people say clear, I'm moving ahead.

**28:00 - 28:10**

Dileep Karri: Alright, so I have to now set up clot.md and memory.md. Now, clot.md, I will do some intelligent thing, okay? So there is this...

**28:11 - 28:20**

Dileep Karri: Claude Code code guidelines that Andre Karpatay had shared earlier, okay? So, this is a tweet written by Andre Karpatay.

**28:20 - 28:23**

Dileep Karri: So, basically, this is the tweet that...

**28:23 - 28:32**

Dileep Karri: Andre Karpatay had written. Basically, he said, these are random notes from Claude coding quite a bit over the last few weeks.

**28:32 - 28:50**

Dileep Karri: Okay? So he talks about the coding workflow, he talks about the IDE, the agent swarms, and bunch of stuff. This is a little advanced stuff, but from all of this, right, there are some set of rules that can make Claude Code work really better.

**28:50 - 28:57**

Dileep Karri: So, somebody has taken this advice and created a sample clot code

**28:57 - 29:00**

Dileep Karri: Okay? Which could be used. So...

**29:01 - 29:13**

Dileep Karri: Let me go back. So this Andre Karpath skills, okay, this entire thing is like a cloud.md that you could use. So, let me...

**29:15 - 29:19**

Dileep Karri: put this on... the chap...

**29:20 - 29:25**

Dileep Karri: The tweet is already present over there, so you can connect a tweet from here.

**29:25 - 29:38**

Dileep Karri: Okay? So, whatever is here, so if you look at this, there is one clot.md over here, which is the behavioral guidelines to reduce the common LLM coding mistakes.

**29:38 - 29:49**

Dileep Karri: Okay? So this is the, you know, LLM guidelines. The trade-off here, which you should remember is, these guidelines bias towards caution over speed.

**29:49 - 29:59**

Dileep Karri: For trivial tasks, use judgment, okay? So, they bias caution over speed, so that's what is going to happen. So, rules like think before coding.

**29:59 - 30:05**

Dileep Karri: Simplicity first, surgical changes, goal-driven execution, so on and so forth.

**30:06 - 30:11**

Dileep Karri: Okay, so this is my basic cloud.md, which I can set up.

**30:12 - 30:16**

Dileep Karri: So now, I will go to this, I will copy this clot.md.

**30:18 - 30:21**

Dileep Karri: Okay, so basically I'm copying just the link in the URL.

**30:22 - 30:27**

Dileep Karri: Right? Now I'm going to share my complete desktop so that you can see the full setup.

**30:30 - 30:34**

Dileep Karri: Alright, now I'm going to open Anti-Gravity.

**30:38 - 30:43**

Dileep Karri: Okay, so there is this thing that you see, we will come back to it later.

**30:43 - 30:46**

Dileep Karri: Now, I'm opening a new terminal.

**30:47 - 30:50**

Dileep Karri: Which is CD Sketch 2 app.

**30:50 - 30:55**

Dileep Karri: Okay? And I'm going to put... floor.

**30:57 - 30:59**

Dileep Karri: I crushed this folder.

**31:01 - 31:05**

Dileep Karri: And this is my cloud terminal on which I will work.

**31:06 - 31:10**

Dileep Karri: Okay, so before I do anything, I will copy this.

**31:10 - 31:18**

Dileep Karri: And I'll tell, set up... this... as my...

**31:19 - 31:22**

Dileep Karri: This thing, before that, one thing I need to do

**31:23 - 31:33**

Dileep Karri: is open the folder. I forgot to open the folder. I had to open the Sketch2 App folder, because that is where I have to put all my files.

**31:40 - 31:43**

Dileep Karri: Okay? Sketch to App folder is there.

**31:43 - 31:48**

Dileep Karri: I will open the terminal window, so I'll open the new terminal.

**31:49 - 31:51**

Dileep Karri: Right? I don't require my agent.

**31:57 - 32:01**

Dileep Karri: Alright, so now here I will mention Claude.

**32:05 - 32:11**

Dileep Karri: We are here. I'll copy, and I'll say, set this up.

**32:11 - 32:15**

Dileep Karri: As Mike... dot.md.

**32:23 - 32:26**

Dileep Karri: Okay, set this up as my cloud.ind.

**32:37 - 32:39**

Dileep Karri: Okay, so what I'm going to do is...

**32:48 - 32:57**

Dileep Karri: I'll allow it to fetch the content. See, uppercase is not required, but it is usually a good habit. I'll allow everything.

**32:58 - 33:04**

Dileep Karri: And you see here, my clot.md is difficult. It's different, soil.

**33:05 - 33:17**

Dileep Karri: Okay? Now, what I'm showing you is my setup, okay? The setup that I use. You can try to figure out, experiment on your different kinds of setup, and try to build accordingly.

**33:17 - 33:21**

Dileep Karri: Okay? This is my setup that I'm showing all of you.

**33:24 - 33:32**

Dileep Karri: Okay? Saved it to this. Now it is asking, should I make it global or everything, okay? I'll say don't make it global.

**33:34 - 33:50**

Dileep Karri: Why am I not making it global? Very simple, because I'm going to teach this to multiple cohorts, so when I teach, I don't want to make it global, I want to keep it local so that I'm able to teach. You, if you like this, you can as well make it global.

**33:50 - 33:54**

Dileep Karri: Is this clear how Claude.md is done?

**33:55 - 33:59**

Dileep Karri: Is this part clear, how I set up my clot.md?

**33:59 - 34:09**

Dileep Karri: Okay? Now, you should assume that whenever it is running, it is going to consume tokens. Okay? Very, very important. Your tokens are going to get consumed.

**34:10 - 34:12**

Dileep Karri: So here, I'm not...

**34:12 - 34:20**

Dileep Karri: optimizing for tokens, I am optimizing for how I would, you know, get the best possible output.

**34:21 - 34:26**

Dileep Karri: Okay? So this is exactly how you could do this, and...

**34:27 - 34:29**

Dileep Karri: That is what I'm going to do.

**34:30 - 34:44**

Dileep Karri: Alright? So now that I have made this available, okay, do... if I want to kind of customize it, etc, you can customize it. That is completely up to you, okay? I have... see...

**34:44 - 35:07**

Dileep Karri: Global, local, forget about it, okay? I see a lot of people getting tangentially confused about what is global, what is local, etc, and all that. I would suggest all of you to just, for now, understand that this is an important file, and set it up as it is, okay? For now, I want you to... if you're not able to understand why.

**35:07 - 35:15**

Dileep Karri: Think of it like a tablet, okay? You don't question what is the composition, etc. Tell that the doctor has prescribed it, and you're able to do it.

**35:16 - 35:20**

Dileep Karri: Okay? So that's how we are going to... Use it.

**35:20 - 35:36**

Dileep Karri: Now, the next part, okay? So, for those of you who have missed a particular step or not able to understand a particular split, my request to you is please check the recording later on. I have a bunch of things to cover, so kindly pay attention.

**35:36 - 35:37**

Dileep Karri: Okay?

**35:38 - 35:41**

Dileep Karri: Now, the next thing, what I'm going to do.

**35:42 - 35:52**

Dileep Karri: The next thing I'm going to do is, I'm going to set up my memory file. In the memory file, I will keep logging in different steps of what is getting executed.

**35:53 - 36:04**

Dileep Karri: Okay? I'll first set up my memory file, where I'm going to set up different, steps on what is getting executed. So, I will say, make a

**36:05 - 36:10**

Dileep Karri: memory... dot MD.

**36:12 - 36:23**

Dileep Karri: where I will automatically log in the key steps of my project, the details of the project, what are the steps that are happened, and what is currently pending.

**36:28 - 36:29**

Dileep Karri: Okay?

**36:30 - 36:37**

Dileep Karri: So, where we will automatically log in the key steps of the project, details of the project, etc, so on and so forth.

**36:43 - 36:46**

Dileep Karri: Okay, so look at memory.md.

**36:48 - 36:55**

Dileep Karri: Here, if you see, it is a running log of the Sketch 2 app project, update as work progresses.

**36:56 - 37:04**

Dileep Karri: One paragraph description of what Sketch 2 app is and its goal, the key details, what is my stack, the entry points.

**37:04 - 37:17**

Dileep Karri: The external services, constraints or non-goals, what are the completed steps, in progress, pending, or next up, open questions and decisions, and the notes.

**37:17 - 37:30**

Dileep Karri: Okay? For now, I am not going to automatically do this. In particular steps, I'll keep saying update memory.md. The cloud will update the necessary things.

**37:31 - 37:36**

Dileep Karri: Okay? So, clear so far, plot.md and memory.md.

**37:39 - 37:54**

Dileep Karri: Okay? These are files that I have created. Clod.md is more like your system prompt. Memory.md is the log where I am storing the system information of how my project is proceeding.

**37:55 - 37:58**

Dileep Karri: Okay? So now,

**37:58 - 38:05**

Dileep Karri: if I have to go ahead and do the next steps, okay? The next steps that I'm going to do

**38:08 - 38:18**

Dileep Karri: Now that I have done this, I will need a skill For building out

**38:22 - 38:24**

Dileep Karri: My complete app.

**38:27 - 38:37**

Dileep Karri: That means I need to have a proper procedure as to how I can build my complete app step by step.

**38:37 - 38:55**

Dileep Karri: Okay? So, one thing is, I can say, hey, I want to build this app, I want to do this, and I could continue doing that. Okay? The other thing that I could do is, instead of this, I can use a skill of the best practices.

**38:59 - 39:00**

Dileep Karri: Of building the app.

**39:03 - 39:14**

Dileep Karri: Yesterday, you saw one best practices of PM skills, where we tried to build the PRD, and from the PRD, we built the app.

**39:14 - 39:23**

Dileep Karri: This time, we will take a different process, and we will try to build the app with those best practices.

**39:23 - 39:34**

Dileep Karri: And for that, I will use another skill, which is called Superpowers, okay? There is a skill called Superpowers.

**39:40 - 39:49**

Dileep Karri: So what it does is, it turns good software engineering habits into reusable skills for AI coding agents.

**39:49 - 39:56**

Dileep Karri: Okay? So there is a software engineering habit, the best software engineering habit for writing good software.

**39:56 - 40:04**

Dileep Karri: You will take those habits that have been converted into skills for coding agents, especially cloud code.

**40:04 - 40:20**

Dileep Karri: And instead of an ad hoc coding, it will actually give an end-to-end dev workflow instead of ad hoc coding, okay? Instead of you trying to tell, do this, do this, do this, it will go in a systematic manner and build the complete thing.

**40:20 - 40:31**

Dileep Karri: So, some of the things it does is brainstorming and clarifying requirements, producing a design document or plan, okay? Test-driven development.

**40:31 - 40:48**

Dileep Karri: Structured execution, etc. Now, you don't have to understand what it means, okay? Just understand that I have borrowed the brains of some of the best software engineers, senior engineers, who are now going to build this app slowly and in a proper manner.

**40:49 - 40:55**

Dileep Karri: Okay, so now this is... Another skill that we are going to use.

**41:01 - 41:15**

Dileep Karri: Okay, so this is superpowers, and as you can see, 13,000 people have forked it, or building their versions on top of it. 152,000 people have actually, you know, kind of...

**41:16 - 41:18**

Dileep Karri: started, okay? Some of the best

**41:19 - 41:33**

Dileep Karri: reports in terms of software engineering agents. So, are you guys understanding how I am orchestrating multiple skills together to actually think through and build my cloud core?

**41:34 - 41:38**

Dileep Karri: Okay? I literally just put the link on top. Please check.

**41:39 - 41:53**

Dileep Karri: Okay, so I am actually trying to orchestrate the different skills, and trying to build this. Now, I will check. So, this one I have already installed on my system, but I'm just showing you.

**41:54 - 42:02**

Dileep Karri: Copy this... Go to your Cloud Code, Okay? I'll put the link.

**42:03 - 42:08**

Dileep Karri: Check if the skill is installed.

**42:09 - 42:13**

Dileep Karri: If not... Do. Install.

**42:14 - 42:15**

Dileep Karri: Skill.

**42:17 - 42:21**

Dileep Karri: Okay? I'm saying check if the skill is installed.

**42:21 - 42:28**

Dileep Karri: If your skill is installed, If it is not, go ahead and do this. So, if you see here.

**42:31 - 42:47**

Dileep Karri: Okay? It is already installed on my system, because this is something that I regularly keep using, so therefore, I have no need to kind of install it, but I'm just saying that this is a skill

**42:47 - 42:53**

Dileep Karri: that you might need to install, okay? If it is not installed, you can install it yourself.

**42:53 - 42:57**

Dileep Karri: Okay, so now my super parse thing is installed.

**42:58 - 43:06**

Dileep Karri: Right? So this was globally installed by me, because this is something I use on a day-to-day basis, so I have installed this, skill.

**43:06 - 43:17**

Dileep Karri: The next one... to install. The next skill to install... Is something called... UI? UX?

**43:19 - 43:22**

Dileep Karri: skill. So, there is a UI UX Pro Max skill.

**43:26 - 43:37**

Dileep Karri: Okay, there is a UI UX Pro Max skill that is present. Again, if you see, 65,000 stars, 6,500 skills that are available.

**43:37 - 43:49**

Dileep Karri: I will now copy this, and I'm going to tell exactly the same thing, that install this UI UX ProMac skill, if it is present, if not, ignore.

**43:54 - 44:03**

Dileep Karri: Okay? So what I'm saying is, I'll put it, and I'll say, check if the... Skill is installed.

**44:04 - 44:05**

Dileep Karri: If not...

**44:08 - 44:12**

Dileep Karri: Do install the... Goodbye.

**44:14 - 44:14**

Dileep Karri: Okay?

**44:16 - 44:17**

Dileep Karri: There you go.

**44:17 - 44:21**

Dileep Karri: So we have the next skill, which is the UI UX.

**44:25 - 44:26**

Dileep Karri: Pro Max skill.

**44:30 - 44:37**

Dileep Karri: Okay, now this one is not installed, so it is going to install this UI UX Pro Max skill.

**44:39 - 44:48**

Dileep Karri: So now, it is asking me some questions, so that I have to run this in the prompt. So first, I will run this plugin so-and-so.

**44:48 - 44:52**

Dileep Karri: Successfully added, then I'm going to install.

**44:52 - 44:56**

Dileep Karri: I will install the... Good.

**44:59 - 45:06**

Dileep Karri: Okay? So, I will say install for me, or install everywhere. I think this skill...

**45:06 - 45:08**

Dileep Karri: I can install for me.

**45:09 - 45:11**

Dileep Karri: I can use it whenever I want.

**45:12 - 45:18**

Dileep Karri: How to check if your skills are installed? You just ask what are the skills that are installed, and you can install with that.

**45:21 - 45:25**

Dileep Karri: Okay, so now I'll say reload plugins.

**45:25 - 45:32**

Dileep Karri: So my plugins are reloaded. UI UX Pro Max Skill is also going to be installed.

**45:32 - 45:49**

Dileep Karri: Now, one thing you need to understand is, I am not optimizing for tokens here, I'm optimizing for build quality. Token optimization is something I will talk later on, okay? So, assume that this is going to consume your tokens. So, you have to take a trade-off.

**45:49 - 45:56**

Dileep Karri: Do you want... you want a very good quality product, or you want to conserve your tokens? You have to make that call.

**45:58 - 46:18**

Dileep Karri: Alright, clear so far. We have, you know, kind of installed this on our cloud code, we have installed the UI UX Pro Max skill, we have installed our skill of superpowers, and now we can try to build the product.

**46:18 - 46:19**

Dileep Karri: Okay?

**46:20 - 46:25**

Dileep Karri: So far, so good. We can orchestrate, we can build the product.

**46:26 - 46:35**

Dileep Karri: Alright, let us go ahead and build this product. Now, I'm going to use Whisper Flow and start talking to it to kind of build all of this product.

**46:36 - 46:40**

Dileep Karri: You should understand that I am building this product on...

**46:41 - 46:58**

Dileep Karri: Anti-gravity is just for me to see the files, and also, whenever my cloud fails, I can go to my memory, tell what is possible, what is not, and pick it forward from there. So, for that reason, I am using this. So now, I will say.

**47:00 - 47:08**

Dileep Karri: I want to start building my, application Sketch 2 app, so use the...

**47:08 - 47:24**

Dileep Karri: you know, super power skill, as well as the UI UX ProMac skill in tandem, wherever required. Understand clearly which skill needs to be called where, and call forth the right skill wherever required.

**47:27 - 47:31**

Dileep Karri: Okay? So, I'm building the Sketch 2 app.

**47:31 - 47:35**

Dileep Karri: And, this is exactly what it is, this thing.

**47:35 - 47:41**

Dileep Karri: So now, my brainstorming Is going to start.

**47:42 - 47:53**

Dileep Karri: Okay, so now I'm going to brainstorm with using the superpowers brainstorming skill to actually clarify on what I want to build.

**47:54 - 47:59**

Dileep Karri: Okay? So, this is what it is. So, sketch to app. Which of this matches your vision?

**47:59 - 48:11**

Dileep Karri: User uploads a hand-driven, hand-drawn wireframe photo scan. AI generates a working web app. User draws an in-browser canvas.

**48:11 - 48:21**

Dileep Karri: live preview of generated UI. User uploads a Figma-style mock-up or screenshot AI clones into code. So, I will say...

**48:25 - 48:26**

Dileep Karri: both,

**48:27 - 48:38**

Dileep Karri: Ang... So, I would like to draw on a canvas also, and they should have both image upload.

**48:38 - 48:43**

Dileep Karri: And in-browser drawing, both producing a working app.

**48:43 - 48:45**

Dileep Karri: So, how should the output be?

**48:46 - 48:59**

Dileep Karri: Okay? So, what should be the output? Whether it's a single file HTML, whether it's a React plus tailwind, or a live sandboxed preview inside the app itself.

**48:59 - 49:13**

Dileep Karri: Okay, so you'll have to decide which one you want. You can, I will say, B. I want it to be a React app that user can download, but I would also want to get a preview, so let me say...

**49:14 - 49:17**

Dileep Karri: or maybe D, all of the above, the user can pick the format.

**49:18 - 49:27**

Dileep Karri: Okay, so this is different from the PRD, wherein I am clarifying everything that is kind of coming, to all of that.

**49:27 - 49:37**

Dileep Karri: Okay? Because the skill is now good in terms of brainstorming, it is going to ask me all of those questions required, and help build that

**49:37 - 49:40**

Dileep Karri: plan of how I would need to build this app.

**49:40 - 49:50**

Dileep Karri: Which AI model powers the sketch-to-code generation? I will say, I have an... Open router... Keep.

**49:50 - 49:53**

Dileep Karri: I want to choose.

**49:55 - 49:57**

Dileep Karri: which... model.

**49:57 - 50:04**

Dileep Karri: to use... Lord... Opus?

**50:05 - 50:07**

Dileep Karri: file.

**50:07 - 50:10**

Dileep Karri: Gemini... 3.1...

**50:19 - 50:21**

Dileep Karri: Okay, who runs this, and how?

**50:22 - 50:27**

Dileep Karri: Okay? So, whether it's a local-only dev tool.

**50:27 - 50:50**

Dileep Karri: It is, whether it's a deployable web app where users can sign in and bring their own open router key, a deployable web app where you host your key usage limited per user, local first, deploy later. Okay? So, I will kind of keep it local first, and maybe then later on have a deployable version.

**50:50 - 50:55**

Dileep Karri: So, I will say D, where I'm going to build it local first, and then deploy later.

**51:06 - 51:23**

Dileep Karri: Okay, so now it is going to build this plan. Export the... explore the project context, ask clarifying questions, propose two to three approaches, present a design for approval, write the design doc, transition to the writing plan skill.

**51:23 - 51:31**

Dileep Karri: Now, for the in-browser drawing canvas, which one do you prefer? TLDRAW?

**51:31 - 51:37**

Dileep Karri: Then, Excalibra or something, I will say go with TLDraw.

**51:45 - 51:52**

Dileep Karri: How should the... You know, the user iterate on the model.

**51:53 - 52:10**

Dileep Karri: either chat refinement or resketch on top. That is, after generation, I would need to chat with the model to tweak, or re-sketch on top, where I annotate the existing preview with TLDRAW, and then try to regenerate.

**52:11 - 52:17**

Dileep Karri: Okay? So, I will say... B, which is chat refinement with Resketch.

**52:21 - 52:36**

Dileep Karri: So, it is asking a bunch of questions, okay? So, it is going to ask you a bunch of questions. You have to be patient and answer. It is like acting like a product manager who is doing your interview, so that it has the clarity on what it wants to build.

**52:36 - 52:55**

Dileep Karri: Okay? Scope for V1. Upload image or TLDRAW, pick model, generate single file HTML, preview, download, chat, refine, skip React Sandbox, resketch later, full vision V1, Upload plus TLDRAW, all three input formats.

**52:55 - 53:05**

Dileep Karri: upload plus TLDRAW, which is the middle part, etc. I will start with the middle, then we can upgrade it to the other things.

**53:08 - 53:18**

Dileep Karri: So, you are making a judgment on how this app should be, how the app is trying to go with this, and it is telling you the rest of the stuff.

**53:28 - 53:32**

Dileep Karri: Okay, so it is giving me options. Option 1 is next.js.

**53:33 - 53:53**

Dileep Karri: It is recommended, it is saying one app, server root, proxies, open router, client has TLD draw canvas plus upload plus chart panel, state in React, deploy to Versal in one click later. Simplest, fewest moving parts, server root protects API key from day one, so security is there.

**53:53 - 53:57**

Dileep Karri: Then, harder to swap front-end independently.

**53:57 - 54:04**

Dileep Karri: The other one is front-end stays lightweight, but split front-end and back-end, but there is going to be some problems.

**54:04 - 54:08**

Dileep Karri: Then, other thing is pure client-side key in local storage.

**54:08 - 54:12**

Dileep Karri: They will have some kind of issues that will kind of come.

**54:13 - 54:19**

Dileep Karri: Okay, so I'll say, go with... optional.

**54:20 - 54:20**

Dileep Karri: One.

**54:24 - 54:27**

Dileep Karri: Okay, I can go with option 1.

**54:34 - 54:42**

Dileep Karri: Okay, so now what it is doing is, it is actually giving me the architecture. What is the architecture of this app?

**54:43 - 54:44**

Dileep Karri: That you do.

**54:44 - 54:54**

Dileep Karri: Okay? Now, sometimes you might face a question you don't really understand. Maybe you can screenshot it and ask, like, what does it mean? What option should I go for?

**54:55 - 55:06**

Dileep Karri: Or you can simply go with whatever Cloud Code recommends, because that is the best you could do. If you're not so aware, that is the best you can kind of do.

**55:06 - 55:14**

Dileep Karri: So then, you have this complete architecture. Mostly, it should be fine, you don't have to, kind of, worry about it.

**55:14 - 55:20**

Dileep Karri: Okay? So, I will say looks... good.

**55:21 - 55:30**

Dileep Karri: So now, it is also going to give the design for approval. Okay, so for design, I have options. So there is one option, of course.

**55:32 - 55:37**

Dileep Karri: superdesign.dev, okay? There is the superdesign

**55:39 - 55:49**

Dileep Karri: dot dev, that is one option that you can use, okay? Where you can choose what your option should feel like.

**55:50 - 56:03**

Dileep Karri: Okay? So, for example, this is, like, a good system that I could use. This vibe checker design feels like something like a canvas I can use. That is one way.

**56:04 - 56:09**

Dileep Karri: The other way is, there is something called 21st... dot dev.

**56:11 - 56:16**

Dileep Karri: Okay, so 21st.dev is slightly more advanced, and putting the...

**56:17 - 56:23**

Dileep Karri: link over here. So here, I will kind of go with components.

**56:23 - 56:30**

Dileep Karri: Okay, so what it means is, I will say, you know, these are the different components.

**56:30 - 56:48**

Dileep Karri: And in components, you have announcements, backgrounds, borders, call to action, docs, features, footers, hooks, images, maps, navigation menu, pricing section, so on and so forth. For example, if I want this kind of animation.

**56:48 - 56:56**

Dileep Karri: Okay? I can click on that animation, and I can copy the prompt, and that animation kind of comes at the top.

**56:57 - 57:20**

Dileep Karri: Okay? So I can say, put the title Sketch2 app and have a small animation happening at the top. It will build it that for me. So, if you are not so particular about how each section of your website should look like, you can use, SuperDesign, which is like a singular thing that you can use. It is like everything.

**57:20 - 57:25**

Dileep Karri: But if you are very particular about, okay, this part of my website should look like this.

**57:25 - 57:31**

Dileep Karri: this part of my website should look like this. That's when you can use these components.

**57:31 - 57:46**

Dileep Karri: Okay, see this shader background? Design is everything. So, all kinds of animations that you want to build, you can build those animations into that, okay? So, again, you have the AI chat components, etc, and all that.

**57:47 - 58:00**

Dileep Karri: Alright? So, now what I'll do is, I will slightly grow into a brainstorm mode, and tell what are those components I would require, so that I can pick those components from 21st.dev.

**58:01 - 58:15**

Dileep Karri: Alright? So, I'm... yesterday, I used a simple super design. Today, I'm going to use 25.dev to choose component by component of how my app should kind of look like.

**58:16 - 58:19**

Dileep Karri: Okay, so I go back to my anti-gravity.

**58:21 - 58:29**

Dileep Karri: All good, following so far what I've been doing. I'm brainstorming, and I'm kind of doing this. Looks good.

**58:31 - 58:48**

Dileep Karri: For my app, I want to know... the proper... sections... So that... I can give visual references.

**58:50 - 58:52**

Dileep Karri: 21st.dev.

**58:52 - 58:58**

Dileep Karri: Along with... overall... look and feel.

**58:59 - 59:01**

Dileep Karri: Super design.

**59:02 - 59:03**

Dileep Karri: Okay?

**59:05 - 59:07**

Dileep Karri: what I said, 21st.dev.

**59:11 - 59:14**

Dileep Karri: Overall look... and feel...

**59:18 - 59:24**

Dileep Karri: You can use the... U-I-U-X.

**59:25 - 59:26**

Dileep Karri: max.

**59:26 - 59:27**

Dileep Karri: Stupid.

**59:34 - 59:35**

Dileep Karri: Okay?

**59:35 - 59:44**

Dileep Karri: So what I'm doing is, I'm now asking the proper sections so that I can give visual references from 21st.dev, and

**59:45 - 59:57**

Dileep Karri: I can design my overall look and feel of my app. So now, I'm kind of working on the design. So I'm trying to build the design and try to work on my design.

**[01:00:16] - [01:00:19]**

Dileep Karri: Okay, so look at the design, the visual system.

**[01:00:20] - [01:00:24]**

Dileep Karri: So, it is telling me... That...

**[01:00:28] - [01:00:42]**

Dileep Karri: Okay, so the sections are top bar, generate, these are the search terms that I can use for. I can give the left panel sketch workspace, TLDRAW canvas Frame, that

**[01:00:42] - [01:01:01]**

Dileep Karri: I can use model picker, generate button, right panel, preview iframe, etc. So, these are the few top things that it has kind of given, okay? So, it has given the search terms also, so I can search for these terms. So, I'll copy this.

**[01:01:02] - [01:01:05]**

Dileep Karri: And I will search for these terms over here.

**[01:01:13] - [01:01:18]**

Dileep Karri: Okay, so I can kind of search for the navbar.

**[01:01:20] - [01:01:21]**

Dileep Karri: Copy.

**[01:01:46] - [01:01:48]**

Dileep Karri: I'll just put navbar.

**[01:02:03] - [01:02:09]**

Dileep Karri: Alright, because it's a dark background, I will need a dark background, so I can pick this up.

**[01:02:10] - [01:02:12]**

Dileep Karri: And copy prompt.

**[01:02:16] - [01:02:17]**

Dileep Karri: Okay.

**[01:02:17] - [01:02:22]**

Dileep Karri: And I'll... Say, now, bar.

**[01:02:34] - [01:02:37]**

Dileep Karri: So there is some... Error, just give me a second.

**[01:02:47] - [01:02:55]**

Dileep Karri: So, one way is I can say, pick those components from there and copy it one step by step, or I can say.

**[01:02:56] - [01:03:01]**

Dileep Karri: Go to... 21st.dale.

**[01:03:01] - [01:03:12]**

Dileep Karri: or use... The best practices... To pick the... right components.

**[01:03:14] - [01:03:28]**

Dileep Karri: Okay, because it's a thousand lines, right, thousand, thousand, thousand lines, I have to keep pasting. So instead, you know, we will actually, take this and try to do this.

**[01:03:41] - [01:03:49]**

Dileep Karri: So, because the skill knows the best components to use, it has picked up those basic components.

**[01:03:51] - [01:03:54]**

Dileep Karri: Okay? So it is telling me that this is the...

**[01:03:54] - [01:04:06]**

Dileep Karri: you know, the core stack, this is the code highlighting, this is the app state, and these are the things. If you want, you can use it, or you can go ahead for that.

**[01:04:06] - [01:04:10]**

Dileep Karri: Okay? So, I will say, go ahead.

**[01:04:15] - [01:04:22]**

Dileep Karri: And one thing I'll do is, I will add my own flavor, to this.

**[01:04:24] - [01:04:29]**

Dileep Karri: I'll go to Super Design. There is a particular design that I like.

**[01:04:31] - [01:04:32]**

Dileep Karri: Okay.

**[01:04:36] - [01:04:44]**

Dileep Karri: So this one feels like a lovable-type stuff. If you see, it feels like the lovable, type stuff.

**[01:04:45] - [01:04:48]**

Dileep Karri: So, I'll copy the full prompt.

**[01:04:49] - [01:04:51]**

Dileep Karri: Go back to here.

**[01:04:54] - [01:05:02]**

Dileep Karri: For the design, Use this as the... Scaffolding.

**[01:05:04] - [01:05:06]**

Dileep Karri: or inspiration.

**[01:05:07] - [01:05:10]**

Dileep Karri: So that the loo can...

**[01:05:13] - [01:05:15]**

Dileep Karri: is like this.

**[01:05:16] - [01:05:18]**

Dileep Karri: And I'll put the prompt.

**[01:05:20] - [01:05:31]**

Dileep Karri: Okay? So, I'm giving it some information of how I want my design to be, and I will try to do this. So now it is going to...

**[01:05:31] - [01:05:38]**

Dileep Karri: Visual language and, everything, so it is trying to, kind of build that out.

**[01:05:46] - [01:05:50]**

Dileep Karri: So, if it is good, it will start writing. So, I'll say approve.

**[01:05:51] - [01:05:56]**

Dileep Karri: Okay, so now I have actually did the design part.

**[01:05:57] - [01:06:05]**

Dileep Karri: Okay? I have taken my design right now, I have approved my design, so my design is now getting written.

**[01:06:07] - [01:06:10]**

Dileep Karri: Okay? Are we clear so far of the process?

**[01:06:28] - [01:06:40]**

Dileep Karri: So, 21st.dev is mainly for component level. So, if I want component by component, how I want to control my design, that is where I will do 21st.dev.

**[01:06:40] - [01:06:51]**

Dileep Karri: Okay? So that is exactly what we will do, but here, just to speed up the process, I said choose the components, and I gave my super dev design.

**[01:06:54] - [01:07:03]**

Dileep Karri: Alright? For folks who are not clear, I will do some recap when... a little bit later, but we will continue building.

**[01:07:04] - [01:07:05]**

Dileep Karri: Okay?

**[01:07:06] - [01:07:13]**

Dileep Karri: This is going to be a heavy session, folks. Brace yourself for it, okay? I don't want people asking breaks, etc, and all that.

**[01:07:14] - [01:07:17]**

Dileep Karri: Brace yourself. I have told it before that it's an advanced session.

**[01:07:26] - [01:07:33]**

Dileep Karri: Okay, so the design doc has been written, so there is this new folder, Plans, where I have written my complete design.

**[01:07:35] - [01:07:40]**

Dileep Karri: Okay, if you see, I have the... you know?

**[01:07:41] - [01:07:56]**

Dileep Karri: A local-first deployable later developer tool that turns hand-drawn or uploaded UI sketches into working HTML and React code via vision models. Users iterate via chat refinement and resetching.

**[01:07:56] - [01:08:15]**

Dileep Karri: Okay, this is the input, this is the output, this is the architecture, the data flow, the tech stack, the visual language, the typography, the layout on the desktop, the signature components, the API contract, the error handling, the accessibility.

**[01:08:16] - [01:08:19]**

Dileep Karri: Okay? Out of scope slash future.

**[01:08:20] - [01:08:27]**

Dileep Karri: Okay, so now I have my design system, which is design.md, that has been built for my application.

**[01:08:28] - [01:08:36]**

Dileep Karri: Okay? So now that my design.md has been built, it's a good time to upload my

**[01:08:37] - [01:08:39]**

Dileep Karri: this thing. So I'll say...

**[01:08:43] - [01:08:44]**

Dileep Karri: Update.

**[01:08:45] - [01:08:51]**

Dileep Karri: My... memory... dot MD.

**[01:08:54] - [01:09:04]**

Dileep Karri: Okay, so first, I want to kind of update the memory.md, so that we have everything that is written.

**[01:09:10] - [01:09:12]**

Dileep Karri: Did it pick it up...

**[01:09:14] - [01:09:24]**

Dileep Karri: No, not yet. I think it went directly to the implementation plan, it's okay. After the implementation plan is written, it will update the memory.md.

**[01:09:28] - [01:09:32]**

Dileep Karri: Okay? So I have my implementation plan also.

**[01:09:38] - [01:09:53]**

Dileep Karri: Okay, so now it is asking me options, which option, whether it is sub-agent driven or a parallel session, which is separate. Okay? So, which is the approach? So, first, I will say.

**[01:09:55] - [01:10:01]**

Dileep Karri: update... Memory... MD first.

**[01:10:03] - [01:10:06]**

Dileep Karri: So, first, update memory.md.

**[01:10:13] - [01:10:19]**

Dileep Karri: There you go, it is... Given all my things, it is writing that.

**[01:10:21] - [01:10:25]**

Dileep Karri: memory.md is updated, so you can see here.

**[01:10:25] - [01:10:36]**

Dileep Karri: All of my project overview, the key details, the complicated steps, in progress, pending, pending next up, open questions and decisions, the design doc.

**[01:10:36] - [01:10:41]**

Dileep Karri: And the implementation plan, all of that is... Really.

**[01:10:42] - [01:10:50]**

Dileep Karri: Okay? So far, so good. Now, here is where I'm going to do something a little bit crazy. Pay close attention.

**[01:10:50] - [01:10:53]**

Dileep Karri: I will exit right now.

**[01:10:55] - [01:10:56]**

Dileep Karri: Okay?

**[01:10:57] - [01:10:59]**

Dileep Karri: And I will copy this.

**[01:11:02] - [01:11:04]**

Dileep Karri: I'll paste it.

**[01:11:04] - [01:11:09]**

Dileep Karri: And I will add another command called dangerously.

**[01:11:11] - [01:11:12]**

Dileep Karri: Skip.

**[01:11:13] - [01:11:14]**

Dileep Karri: Permissions.

**[01:11:23] - [01:11:35]**

Dileep Karri: Okay? So, what I have done is, I have said, dangerously skip permissions is what I have done. Now, this is like a root mode, or a admin mode.

**[01:11:36] - [01:11:53]**

Dileep Karri: It will not keep asking me, should I do this, should I not do this, should I write this file, etc. So here, it had asked me a bunch of questions, like, should I write this file, should I not do this, etc. Now, it is in admin mode, where it will execute on its own.

**[01:11:54] - [01:12:07]**

Dileep Karri: Okay? So that is exactly what it is. So what I'm doing is, for execution mode, I will say, use sub-agent-driven. Sub-agent is nothing but, you know, a different

**[01:12:07] - [01:12:11]**

Dileep Karri: Agents will spin up to build this thing for us.

**[01:12:15] - [01:12:30]**

Dileep Karri: Okay, so I'm updating the memory so that in case something goes wrong, I can look at my memory and recover from that, and start building from there. So this is one way of reducing your tokens. You can actually say, hey, you are,

**[01:12:30] - [01:12:39]**

Dileep Karri: you know, your memory, you don't have to worry about the memory. In the memory, these are the steps which have happened, so continue from here.

**[01:12:39] - [01:12:51]**

Dileep Karri: So that way, you don't lose out on your tokens on understanding what has happened, what code was written, etc. Your memory.md will tell you exactly what is required. So this is one way to do that.

**[01:12:51] - [01:13:08]**

Dileep Karri: So now it has 30 bite-sized tasks across 9 phages, okay? So, Git in it happens in task 0.1, so no existing repo or branch. Okay, so no Git repo exists.

**[01:13:09] - [01:13:21]**

Dileep Karri: That is the first answer. Execution cadence, dispatch tasks sequential and auto-continue, pausing only if a review fails. Okay? So I will say...

**[01:13:22] - [01:13:26]**

Dileep Karri: Dispatch... auto-continue.

**[01:13:30] - [01:13:31]**

Dileep Karri: Until...

**[01:13:35] - [01:13:39]**

Dileep Karri: You need review, R.

**[01:13:39] - [01:13:40]**

Dileep Karri: In work.

**[01:13:43] - [01:13:46]**

Dileep Karri: So I'm saying no GitHub repo exists.

**[01:13:48] - [01:13:52]**

Dileep Karri: Okay? Auto-continue until you need review or input.

**[01:14:03] - [01:14:12]**

Dileep Karri: So, scaffold, dependencies, configure, different, things to build. Prompt builder, some

**[01:14:12] - [01:14:20]**

Dileep Karri: bunch of different things. These are the different steps that need to be executed for us to build the app.

**[01:14:21] - [01:14:34]**

Dileep Karri: So if you see here, this is a very different way to where you can actually try to build some very complex apps with deep logic that is possible with such kind of things.

**[01:14:36] - [01:14:38]**

Dileep Karri: Okay? So the more...

**[01:14:38] - [01:14:44]**

Dileep Karri: complex apps and the more brainstorming I'm trying to do, the more tokens I will use.

**[01:14:45] - [01:14:59]**

Dileep Karri: Okay? Yesterday, I had used something much smaller. It's smaller process. Today, I'm going deeper into a more advanced process to actually build the complete application end-to-end.

**[01:15:00] - [01:15:08]**

Dileep Karri: Okay? If in case my complete tokens are used, okay, in case my complete tokens are used.

**[01:15:08] - [01:15:22]**

Dileep Karri: Okay? At that point in time, what I need to do is, I will have to pick it up. I have my plans, I know what plans are done, what plans are executed. I will ask my anti-gravity agent to pick

**[01:15:22] - [01:15:37]**

Dileep Karri: From there, and start continuing to build. And that is why we are putting the design system, the plan, so that any agent, if this agent fails, I have another agent, I have another agent which can work on my behalf.

**[01:15:42] - [01:15:50]**

Dileep Karri: So, one thing you should remember, one cardinal rule, which is very, very, very important, If you are...

**[01:15:50] - [01:15:59]**

Dileep Karri: Context is greater than 50%, you will see a degradation in performance on plot code.

**[01:15:59] - [01:16:06]**

Dileep Karri: Okay? If there is a context degradation, there will be 50% overall.

**[01:16:06] - [01:16:26]**

Dileep Karri: Okay? So there, you will see that there is going to be a 50% degradation in terms of... sorry, there's a lot of degradation in the performance. So therefore, once we reach 50%, we have to be alert. Either we update the memory, try to close what has happened, and

**[01:16:26] - [01:16:30]**

Dileep Karri: Spin up a new agent to continue working from there.

**[01:16:32] - [01:16:37]**

Dileep Karri: Okay? So... I will go ahead.

**[01:16:40] - [01:16:42]**

Dileep Karri: And start building.

**[01:16:45] - [01:16:52]**

Dileep Karri: How to get context percentage, etc, I will tell you. I will come back to it later on.

**[01:16:52] - [01:16:55]**

Dileep Karri: Okay? So here, what I'm doing is, I have...

**[01:16:55] - [01:17:08]**

Dileep Karri: orchestrated the complete build over here. So, it is now taking each of the phase, and install the dependencies, and do all of the configurations.

**[01:17:08] - [01:17:20]**

Dileep Karri: One thing to, as I said, I'll just recap what I've covered so far, especially the context part. Try to stay less than 50% of the context. If it is exceeding...

**[01:17:23] - [01:17:32]**

Dileep Karri: Complete the important task, ensure that you have written to the proper logs and everything, and then resume the thing.

**[01:17:35] - [01:17:36]**

Dileep Karri: Okay?

**[01:17:38] - [01:17:44]**

Dileep Karri: Phase 0.1 is done, 0.2 and 3, etc. are running.

**[01:17:44] - [01:17:50]**

Dileep Karri: Let it run, we will come back to it in some time and check on a few things.

**[01:17:50] - [01:17:57]**

Dileep Karri: In the meanwhile, let me talk to you about some other skills which are very, very, very important.

**[01:17:58] - [01:18:01]**

Dileep Karri: Okay? So, as I said in the usage.

**[01:18:03] - [01:18:07]**

Dileep Karri: If it is less than 50%,

**[01:18:07] - [01:18:10]**

Dileep Karri: Your Cloud Code performance is good.

**[01:18:15] - [01:18:20]**

Dileep Karri: Okay? If it is greater than 50%, the performance will degrade.

**[01:18:25] - [01:18:28]**

Dileep Karri: So you have to be careful about that.

**[01:18:28] - [01:18:46]**

Dileep Karri: Okay? Is this point clear? Try to keep 50% less than usage overall. If it is greater than 50%, try to stop it there, ensure that the main tasks are done, your memory is updated, then open with a fresh context.

**[01:18:47] - [01:18:57]**

Dileep Karri: Okay, that is important. How to check usage? I'm going to explain. Have patience. I told it already twice that I'll explain later. Still, people are asking same thing.

**[01:18:57] - [01:18:58]**

Dileep Karri: Patience.

**[01:19:03] - [01:19:17]**

Dileep Karri: Alright? So, less than 50%, performance is good. Greater than 50%, the performance is going to degrade, okay? So, when you want... once it is greater than 50%, what you need to do is, first, update

**[01:19:19] - [01:19:20]**

Dileep Karri: Memory?

**[01:19:22] - [01:19:28]**

Dileep Karri: md, you have to update your memory.md. Then the next thing you have to do is, you will have to exit

**[01:19:29] - [01:19:32]**

Dileep Karri: Then open Claude again.

**[01:19:32] - [01:19:34]**

Dileep Karri: And start executing.

**[01:19:36] - [01:19:38]**

Dileep Karri: From where you left?

**[01:19:40] - [01:19:43]**

Dileep Karri: Based on the plan and memory.

**[01:19:49] - [01:19:59]**

Dileep Karri: Okay? Now, this is the process of how you can handle the context window, or the usage whenever you are trying to make it work.

**[01:20:00] - [01:20:08]**

Dileep Karri: Okay? Now, one more thing that I have shown you, I'll give you some clarity. There is a mode called dangerously

**[01:20:11] - [01:20:18]**

Dileep Karri: Skip... Permissions... This is, like, admin.

**[01:20:19] - [01:20:26]**

Dileep Karri: Okay? Admin mode means I'm telling Cloud Code, do whatever you want, I'm not going to interfere.

**[01:20:27] - [01:20:37]**

Dileep Karri: Okay? Do whatever you want, I'm not going to interfere. That is exactly what dangerously skip permissions, etc, and all that.

**[01:20:38] - [01:20:40]**

Dileep Karri: Alright, next.

**[01:20:42] - [01:20:57]**

Dileep Karri: What we are going to do is, we... the dangerous escape permissions means that it will not keep asking me to permissions for everything, it will go build it by itself. Useful in the cases where I'm teaching and doing stuff like this.

**[01:20:58] - [01:21:08]**

Dileep Karri: Now, I'm going to talk to you. For those of you who are interested about going deeper into this 50% context anything, there is a paper called Context Rot.

**[01:21:08] - [01:21:16]**

Dileep Karri: You can read the research paper and go deeper. Google perplexity and figure out those resources. Okay?

**[01:21:16] - [01:21:24]**

Dileep Karri: The next part is how to manage tokens effectively.

**[01:21:28] - [01:21:34]**

Dileep Karri: Okay? How do I manage the tokens effectively? That is what I'm going to address right now.

**[01:21:34] - [01:21:40]**

Dileep Karri: So, addressing... managing the tokens effectively, First thing, clarity.

**[01:21:41] - [01:21:49]**

Dileep Karri: Okay? Right now, I used a lot of tokens to tell exactly what the app I want to build.

**[01:21:49] - [01:21:55]**

Dileep Karri: But those tokens are very, very useful tokens for me, because I have given absolute clarity on what I want to be built.

**[01:21:57] - [01:22:02]**

Dileep Karri: Okay? So that is the first part, clarity. Clarity is the biggest token saver.

**[01:22:03] - [01:22:10]**

Dileep Karri: The more clarity you have on what you want to build, you can save the tokens effectively.

**[01:22:11] - [01:22:16]**

Dileep Karri: No packages, no skills, no magic wand can replace this.

**[01:22:17] - [01:22:25]**

Dileep Karri: Okay? In fact, somebody DM'd me on LinkedIn about an interesting skill called Caveman Skill.

**[01:22:26] - [01:22:29]**

Dileep Karri: Okay? So I'll show you what that caveman skill is.

**[01:22:31] - [01:22:34]**

Dileep Karri: Okay, let me show you that...

**[01:22:35] - [01:22:42]**

Dileep Karri: skill. Yeah, so this is the caveman skill, so look at how they are reducing the tokens.

**[01:22:43] - [01:22:52]**

Dileep Karri: Okay, the caveman skill, where it is saying that the normal Claude use 69 tokens, where you are explaining it in English.

**[01:22:52] - [01:22:57]**

Dileep Karri: Whereas Caveman, you are using only 19 tokens.

**[01:22:58] - [01:23:05]**

Dileep Karri: Where you're using the very least amount of words to kind of convey your information.

**[01:23:06] - [01:23:10]**

Dileep Karri: Okay? I... I am a little skeptical about this.

**[01:23:15] - [01:23:16]**

Dileep Karri: costs.

**[01:23:16] - [01:23:25]**

Dileep Karri: there is a lot of nuance when you are trying to explain things clearly, okay? You are kind of...

**[01:23:25] - [01:23:30]**

Dileep Karri: You know, removing that nuance, And telling stuff.

**[01:23:31] - [01:23:36]**

Dileep Karri: Which is, you know, you are saving up on tokens, but you are reducing the context.

**[01:23:36] - [01:23:40]**

Dileep Karri: Folks, is my voice breaking? Can anybody confirm?

**[01:23:48] - [01:23:51]**

Dileep Karri: Okay, cool, I think now it is fine.

**[01:23:52] - [01:23:53]**

Dileep Karri: Alright.

**[01:23:53] - [01:24:01]**

Dileep Karri: So, what I'm trying to say is, don't hyper-optimize on tokens at the cost of clarity.

**[01:24:01] - [01:24:10]**

Dileep Karri: Okay, don't hyper-optimize the, you know, tokens at the cost of clarity. At least this is what I feel when I'm reading the skill, the caveman skill.

**[01:24:11] - [01:24:15]**

Dileep Karri: Okay? The caveman skill is because of

**[01:24:15] - [01:24:24]**

Dileep Karri: that. Instead, I would show you one more skill, which I think is better. It is called Claude Mem.

**[01:24:26] - [01:24:30]**

Dileep Karri: Okay? This was something that I really like. This is something that I use.

**[01:24:35] - [01:24:39]**

Dileep Karri: Okay? So what it does is... it...

**[01:24:39] - [01:24:55]**

Dileep Karri: captures what is happening. It is like an automated memory.md file, and if you are checking this, you will understand what is happening. For example, I'll show you what my clot.md looks like.

**[01:24:55] - [01:25:07]**

Dileep Karri: So, this is my Cloud Mem, where it is automatically saying that the prompt builder implemented, domain type definitions created, fonts and super design tokens integrated.

**[01:25:08] - [01:25:22]**

Dileep Karri: Okay? Dependencies installed for TDD workflow and UI component, Next.js application scaffolded. So, in case my tokens are exhausted, when I restart the project.

**[01:25:22] - [01:25:29]**

Dileep Karri: everything that I have done previously pops up, okay? I will show that to you with our previous project.

**[01:25:35] - [01:25:37]**

Dileep Karri: There is it.

**[01:26:07] - [01:26:10]**

Dileep Karri: I'll open the folder Model Console.

**[01:26:14] - [01:26:15]**

Dileep Karri: Okay.

**[01:26:30] - [01:26:39]**

Dileep Karri: You look at this, when I opened my Cloud Mem, right.

**[01:26:40] - [01:26:57]**

Dileep Karri: It is saying my savings are 91% reduction from reuse, because it is telling exactly what all I have done. PM skills, workplace catalog Export, Model Council PRD created, bold editorial studio design system added, design system specification.

**[01:26:57] - [01:27:01]**

Dileep Karri: Pre-built environment and implementation approach.

**[01:27:01] - [01:27:09]**

Dileep Karri: Open router API config file created. Bold Editorial studio design system implemented in global styles.

**[01:27:09] - [01:27:16]**

Dileep Karri: So on and so forth. So, I have got all of the things that are available.

**[01:27:18] - [01:27:37]**

Dileep Karri: Okay? So this is what you need to understand, that, Claude memory is the... or Claude Mem, this is actually like a true memory conservation, because it is telling exactly what all things you have done inside Claude code, somewhat like a status, somewhat like what all things have been done.

**[01:27:37] - [01:27:42]**

Dileep Karri: And this... is something that will work. So this I have not run.

**[01:27:43] - [01:27:46]**

Dileep Karri: Whenever you exit the repo and you start again.

**[01:27:47] - [01:27:56]**

Dileep Karri: you will come with this. I don't have to run any prompt, I just have to install the ClaudeMem skill, and you should be able to use it.

**[01:28:01] - [01:28:07]**

Dileep Karri: Alright, so this should work. Let us check how much time have we come so far.

**[01:28:09] - [01:28:21]**

Dileep Karri: So we are still in Phase 4.1, okay? So we have done Phase 1, we have done Phase 2, now Phase 3, and Phase 4 is being built.

**[01:28:22] - [01:28:26]**

Dileep Karri: Okay? So, I want all of you to understand that

**[01:28:26] - [01:28:44]**

Dileep Karri: try to save memory by actually giving context to your agent, but not by saying, okay, I'll cut articles, I'll cut propositions, I'll cut sentences, give it a bunch of words, and reduce the input tokens. Somehow, it is not sitting right in my head.

**[01:28:44] - [01:28:48]**

Dileep Karri: Okay? I will leave it up to you to explore and design.

**[01:28:50] - [01:29:00]**

Dileep Karri: Okay? Whether it is local or global is your choice. Do you want it only for your projects that you're using, or you want it to be available across projects?

**[01:29:00] - [01:29:11]**

Dileep Karri: Okay? That is what you need to understand. Second, install the skills, you have to install it separately, but if you are doing it globally, it is automatically available.

**[01:29:11] - [01:29:21]**

Dileep Karri: Okay? Do some work, or do some reading on what global and local means. If you say, install the skill globally, it is available across the projects.

**[01:29:22] - [01:29:23]**

Dileep Karri: Alright?

**[01:29:28] - [01:29:43]**

Dileep Karri: So, I would typically do global whenever I have some important skills, but one thing I will maintain is I will not put two conflicting skills, okay? Don't try to put two conflicting skills, or skills that can do the same thing.

**[01:29:43] - [01:29:54]**

Dileep Karri: Don't put UI UX ProMac skill and UI design skill, if suppose, another skill exists, and put them globally. Then, the agent is confused which skill to call.

**[01:29:58] - [01:29:59]**

Dileep Karri: Alright?

**[01:29:59] - [01:30:01]**

Dileep Karri: Clear so far?

**[01:30:03] - [01:30:05]**

Dileep Karri: Are you folks clear so far?

**[01:30:11] - [01:30:16]**

Dileep Karri: Okay? Now is a good time to take a break. I will keep the screen on.

**[01:30:16] - [01:30:20]**

Dileep Karri: But I will switch off. We will take a quick 5-minute

**[01:30:20] - [01:30:25]**

Dileep Karri: break, you can see the agents Continuing to build.

**[01:30:29] - [01:30:46]**

Dileep Karri: Okay? After the break, I will do one recap of everything. See, I already told you it is going to be advanced, so you have to be a little attentive, because I have explained things clearly, I still see very basic questions kind of coming in.

**[01:30:46] - [01:30:52]**

Dileep Karri: I will not be able to address those right now, but still, what I would say is.

**[01:30:52] - [01:30:57]**

Dileep Karri: If you have some questions later on, you can do your research, and you can continue from there.

**[01:31:06] - [01:31:10]**

Dileep Karri: Alright, a quick... Let's take a 7-minute break.

**[01:38:33] - [01:38:37]**

Dileep Karri: All right, folks, so what we are doing right now is...

**[01:38:37] - [01:38:52]**

Dileep Karri: It has been crossing one after another, 24 minutes, it has been building, using almost, like, 33,000 tokens. Quite token-intensive, but because our app is complex, I'm kind of going with this.

**[01:38:53] - [01:38:58]**

Dileep Karri: Alright, so as it builds the final stuff, let me quickly recap what we have covered so far.

**[01:38:59] - [01:39:00]**

Dileep Karri: Okay?

**[01:39:02] - [01:39:11]**

Dileep Karri: So what we have kind of looked at so far, which is very, very important, is we first try to set up clot.md.

**[01:39:11] - [01:39:28]**

Dileep Karri: which is like a system prompt where the knowledge is always loaded, and it's a preloaded prompt, and we set up memory.md, which is a memory log of what is happening. So, then I use the skills, and one of the skills that

**[01:39:28] - [01:39:36]**

Dileep Karri: I have used is the superpower skill, wherein I use the superpower skill and the UI UX Pro Max skill.

**[01:39:37] - [01:39:48]**

Dileep Karri: to brainstorm about how my Sketch2 app product must be built, how the Sketch 2 map product must look like, so I tried to brainstorm and build that out.

**[01:39:48] - [01:40:07]**

Dileep Karri: Then, I also talked about usage, which is less than 50%. Performance is good. Greater than 50%, it will degrade. So, you talk about updating your memory. We talked about how you can exit when your context is kind of greater than 50%. So, some of the

**[01:40:07] - [01:40:12]**

Dileep Karri: The three skills, which are very, very important. One is superpowers.

**[01:40:14] - [01:40:19]**

Dileep Karri: That is for the entire building process. The next is the UI UX.

**[01:40:20] - [01:40:21]**

Dileep Karri: For all Macs.

**[01:40:22] - [01:40:23]**

Dileep Karri: Skill?

**[01:40:24] - [01:40:32]**

Dileep Karri: That is, for the UI UX part. I also gave SuperDesign for its... overall reference.

**[01:40:33] - [01:40:47]**

Dileep Karri: Then, I told... I told about ClaudeMem, which is for managing the memory, and this is the best unlock you can get in terms of saving tokens. That is exactly what it is.

**[01:40:48] - [01:41:07]**

Dileep Karri: Okay? So, you have Clot.md, you have a system prompt, you have memory.md, your memory log of what steps have happened, along with the super pass and the UI UX

ProMac skill with the super design. Okay? You have got all of this that is present. So, these are the three main skills.

**[01:41:07] - [01:41:15]**

Dileep Karri: That we have used, and these skills further called have, for example, the superpowers has sub-agents.

**[01:41:17] - [01:41:22]**

Dileep Karri: Which are picking up parallel tasks and doing it on their own.

**[01:41:23] - [01:41:36]**

Dileep Karri: Okay? That is exactly what we have understood. Okay, so let us come back to our build. So now, the last thing I will do is, I need a very good testing skill, or a security skill.

**[01:41:37] - [01:41:45]**

Dileep Karri: Okay? I need a very good testing skill or a security skill towards the end, so for that, I will go to skills.sh.

**[01:41:46] - [01:41:48]**

Dileep Karri: And I'll search for testing.

**[01:41:50] - [01:42:03]**

Dileep Karri: Okay, so for testing, there are multiple skills which are available, and I will try to look at the skills with the maximum things. For example, there is web app testing by

**[01:42:03] - [01:42:15]**

Dileep Karri: Anthropic itself, which is exactly what we can use. Then there is E2E testing patterns, which is another one we could use. So there are multiple such

**[01:42:16] - [01:42:17]**

Dileep Karri: Once we can use.

**[01:42:18] - [01:42:30]**

Dileep Karri: I will use the E2E testing patterns, because it's an end-to-end testing overall, which can, you know, try to build end-to-end automation, which looks kind of...

**[01:42:30] - [01:42:32]**

Dileep Karri: Decent.

**[01:42:33] - [01:42:40]**

Dileep Karri: Okay? It is, 33.5 GitHub stars, that means it is generally good.

**[01:42:41] - [01:42:44]**

Dileep Karri: Okay, so I'll copy this.

**[01:42:48] - [01:42:54]**

Dileep Karri: Okay? So far, so good, and even your memory.md is also updated with the completion.

**[01:42:55] - [01:43:12]**

Dileep Karri: Okay? So, that is there. Before I go into testing and everything, because it is going to be a little involved, first thing is, I'm going to add my open router key. Okay? First thing, I am going to add my open router key, so let me do that.

**[01:43:13] - [01:43:16]**

Dileep Karri: I've stopped sharing my screen, you know why.

**[01:43:17] - [01:43:24]**

Dileep Karri: I'll go into this... I paste my...

**[01:43:31] - [01:43:32]**

Dileep Karri: E?

**[01:43:32] - [01:43:34]**

Dileep Karri: I save it...

**[01:43:57] - [01:44:01]**

Dileep Karri: Okay? Movement of truth is coming closer.

**[01:44:04] - [01:44:11]**

Dileep Karri: Alright, so... Now I'll say... Run the app.

**[01:44:11] - [01:44:17]**

Dileep Karri: So, I'm not... there is some basic testing already done, so I will say, run the app.

**[01:44:43] - [01:44:47]**

Dileep Karri: Okay? So... Movement of truth?

**[01:45:02] - [01:45:06]**

Dileep Karri: There you go, I have a proper

**[01:45:11] - [01:45:14]**

Dileep Karri: Okay? Folks, how does it look?

**[01:45:14] - [01:45:16]**

Dileep Karri: Isn't it looking professional?

**[01:45:18] - [01:45:33]**

Dileep Karri: Okay? I just did this, so I can either draw or I can upload, okay? So, let me first quickly upload and see how we can do this. So, I will search for...

**[01:45:33] - [01:45:38]**

Dileep Karri: images of... a sketch...

**[01:46:21] - [01:46:25]**

Dileep Karri: Okay, let me go to Pinterest, I think I'll get some app drawings.

**[01:46:30] - [01:46:31]**

Dileep Karri: Very bad.

**[01:46:32] - [01:46:36]**

Dileep Karri: It's okay, I think I'll do it myself, I think that's better.

**[01:46:36] - [01:46:41]**

Dileep Karri: So... Maybe I will draw something like... \*\*\*\*\*

**[01:46:43] - [01:46:44]**

Dileep Karri: brewing.

**[01:46:44] - [01:46:46]**

Dileep Karri: I'll draw something like this.

**[01:46:50] - [01:46:52]**

Dileep Karri: I will say, welcome.

**[01:46:56] - [01:47:00]**

Dileep Karri: Outskill... And say, user.

**[01:47:02] - [01:47:04]**

Dileep Karri: I'll say password.

**[01:47:08] - [01:47:10]**

Dileep Karri: Okay?

**[01:47:10] - [01:47:12]**

Dileep Karri: I'll say, generate.

**[01:47:14] - [01:47:20]**

Dileep Karri: So here is my model picker. I can kind of pick any particular model.

**[01:47:21] - [01:47:24]**

Dileep Karri: Welcome to Outskill User and Password.

**[01:47:25] - [01:47:29]**

Dileep Karri: Okay? I have created a sketch.

**[01:47:29] - [01:47:32]**

Dileep Karri: thing that is there. So, let me...

**[01:47:38] - [01:47:40]**

Dileep Karri: Erase it up.

**[01:47:48] - [01:47:50]**

Dileep Karri: Okay? Canvas.

**[01:47:50] - [01:47:51]**

Dileep Karri: See?

**[01:47:54] - [01:48:01]**

Dileep Karri: Let me search for other... proper app sketches. This one looks promising.

**[01:48:02] - [01:48:05]**

Dileep Karri: I'll copy the... I'll just share this image.

**[01:48:15] - [01:48:16]**

Dileep Karri: I'll upload.

**[01:48:25] - [01:48:30]**

Dileep Karri: I'll try to change... to Google Gemini 3 Pro.

**[01:48:31] - [01:48:32]**

Dileep Karri: Generate.

**[01:48:33] - [01:48:40]**

Dileep Karri: Okay, some problem, I'll have to fix this, but let me generate with this Opus 4.5.

**[01:48:51] - [01:48:56]**

Dileep Karri: And by the way, you can also see the code for this. The code is also available.

**[01:48:57] - [01:49:11]**

Dileep Karri: I'm not sure if it is going to produce the app directly. See, this is something we wipe-coded today, okay? So I tried to take a concept of a sketch to app types and try to build it, so don't expect it to work

**[01:49:11] - [01:49:20]**

Dileep Karri: exactly like Lovable or all those apps. The idea is to try to take a small part of it and make it work.

**[01:49:20] - [01:49:30]**

Dileep Karri: Okay, so it kind of built it out decently, I would say, but a lot of overlaps, but I think pretty decent. What don't you think?

**[01:49:41] - [01:49:42]**

Dileep Karri: Right?

**[01:49:47] - [01:49:51]**

Dileep Karri: So, single screens, it should be able to build it very well.

**[01:49:53] - [01:50:12]**

Dileep Karri: Okay? So, this is just the MVP. I just wanted a small MVP so that I could use it, and I could show you how even complex applications where I am doing a sketch and I'm trying to build it, I should be able to do that.

**[01:50:12] - [01:50:28]**

Dileep Karri: Okay? That is exactly what I wanted to kind of show this. Now I can add, you know, a bunch of other features. Okay? I can add a database if I want, I can deploy it

**[01:50:28] - [01:50:32]**

Dileep Karri: To any other place, so a bunch of things I could do.

**[01:50:32] - [01:50:37]**

Dileep Karri: Okay? So now what I'll do is, I will set up the end-to-end testing.

**[01:50:38] - [01:50:43]**

Dileep Karri: Okay? So, for example, I'll say stop... server.

**[01:50:53] - [01:50:59]**

Dileep Karri: Okay, so I don't have to stop the server, you can continue working overall.

**[01:50:59] - [01:51:03]**

Dileep Karri: So then... Excellent.

**[01:51:08] - [01:51:09]**

Dileep Karri: I will say.

**[01:51:10] - [01:51:15]**

Dileep Karri: Install this skill, which is the end-to-end testing skill.

**[01:51:17] - [01:51:25]**

Dileep Karri: So, how do I pick a skill? Look at the number of installs, and look at the number of stars on the GitHub.

**[01:51:25] - [01:51:33]**

Dileep Karri: It has to be a substantial number of people who are using it day in and day out for it to be very, very good.

**[01:51:37] - [01:51:38]**

Dileep Karri: Okay?

**[01:51:41] - [01:51:43]**

Dileep Karri: So, this is end-to-end testing patterns.

**[01:51:52] - [01:51:58]**

Dileep Karri: And you see here on the side, you have the complete code ready. All the code has been built.

**[01:52:06] - [01:52:14]**

Dileep Karri: And if you see, we have used 17% of 1,000 tokens. That means we have used...

**[01:52:15] - [01:52:25]**

Dileep Karri: sorry, 1000K tokens, right? 200K tokens, 17%, you can do the math. I think 170,000 tokens we have used completely.

**[01:52:27] - [01:52:30]**

Dileep Karri: So, installed E2A tests.

**[01:52:30] - [01:52:39]**

Dileep Karri: Now, I will say... Run the E2E testing for the app.

**[01:52:40] - [01:52:44]**

Dileep Karri: So now, I can use the E2A testing also for the app.

**[01:52:48] - [01:53:02]**

Dileep Karri: So, for the Sketch 2 app, I can run the E2V version. So, now you might understand that for the amount of token guzzling I'm doing, I will require the max plan. I will not be able to build anything like this.

**[01:53:02] - [01:53:10]**

Dileep Karri: Without having a max plan, but I can tell you a quick hack to kind of make it work here itself.

**[01:53:11] - [01:53:17]**

Dileep Karri: Okay? So now it is going to install Playwright, which is, like, the end-to-end testing that

**[01:53:17] - [01:53:31]**

Dileep Karri: you know, you will do, then it is going to write the critical path tests. It is going to run the tests as well as report, okay? Now, this is one skill. Let it continue.

**[01:53:31] - [01:53:43]**

Dileep Karri: The other part you will require is security, okay? You require a very good wife coding security. You need a security audit of whether your code has been good or not.

**[01:53:44] - [01:53:46]**

Dileep Karri: Okay? So let us check that.

**[01:53:54] - [01:53:56]**

Dileep Karri: So, we have removed this.

**[01:53:56] - [01:54:01]**

Dileep Karri: So now, I'll go back to Skills, and I will check on security.

**[01:54:08] - [01:54:14]**

Dileep Karri: Okay, security best practices, security best practices, 14.1K.

**[01:54:14] - [01:54:20]**

Dileep Karri: That is one, so I will pick this... Security best practices.

**[01:54:28] - [01:54:34]**

Dileep Karri: Looks good, but the problem is, it has got very less GitHub stores.

**[01:54:35] - [01:54:41]**

Dileep Karri: Okay, it has got very less GitHub stars, so I will check a few more.

**[01:54:49] - [01:54:51]**

Dileep Karri: No skill available.

**[01:55:01] - [01:55:09]**

Dileep Karri: Okay, these are all very new, I'm seeing, but this is good because Firebase is by Google, okay? Firebase is by Google.

**[01:55:09] - [01:55:16]**

Dileep Karri: So, you can continue with this. So, I will choose this security rules auditor.

**[01:55:16] - [01:55:22]**

Dileep Karri: Okay? And, the Firebase, it means it is by Google, so you can actually check the repository.

**[01:55:23] - [01:55:30]**

Dileep Karri: Yes, Firebase is Google's, so... I think very recent ones it has built.

**[01:55:34] - [01:55:36]**

Dileep Karri: Okay, so it's good, decent.

**[01:55:38] - [01:55:42]**

Dileep Karri: Right? But I know that it is... okay, wait, let me see...

**[01:55:45] - [01:55:50]**

Dileep Karri: to help them understand and work with Firebase more effectively, okay? Not very...

**[01:55:51] - [01:55:53]**

Dileep Karri: Convincing, so let us go back.

**[01:55:58] - [01:55:59]**

Dileep Karri: So...

**[01:56:06] - [01:56:09]**

Dileep Karri: Security best practices, let us see this.

**[01:56:19] - [01:56:33]**

Dileep Karri: This is good. You can install this skill and use it. Or, basically, my idea, what I'm trying to tell you, is for everything that you have to run with, so this is good, right? 32.8K GitHub stars. Pretty good.

**[01:56:33] - [01:56:34]**

Dileep Karri: Right?

**[01:56:35] - [01:56:43]**

Dileep Karri: You can check upon what is the overall security that you are trying to check, install the skills, and run that security check for your app.

**[01:56:43] - [01:56:56]**

Dileep Karri: Okay? Very, very important for you to run the security check. If you're a non-tech person, especially, you have to run the security check, okay? There is another workaround for this, okay?

**[01:56:59] - [01:57:04]**

Dileep Karri: There is another workaround. I think I have frozen, just give me a moment.

**[01:57:29] - [01:57:30]**

Dileep Karri: Meaningful.

**[01:57:36] - [01:57:38]**

Dileep Karri: There are people here.

**[01:57:54] - [01:57:58]**

Dileep Karri: Haru, are you able to... See me clearly?

**[01:58:03] - [01:58:04]**

Dileep Karri: Just a second...

**[01:58:15] - [01:58:17]**

Kartik Outskill: Dilip, I think it is better now.

**[01:58:19] - [01:58:32]**

Dileep Karri: I'll tell you what has happened, okay? Very simple. The cloud code end-to-end testing that I was doing, it killed my GPU so much that it just froze my entire Zoom system.

**[01:58:33] - [01:58:40]**

Dileep Karri: Okay? So, I think that is exactly what has happened. So, once I killed my end-to-end testing process.

**[01:58:41] - [01:58:47]**

Dileep Karri: back, okay? So it was not an internet issue, it was just, extensive building issue that was

**[01:58:48] - [01:58:50]**

Dileep Karri: You know, trying to work.

**[01:58:51] - [01:59:01]**

Dileep Karri: Okay? Folks, how did you like the session? I wanted to even show you the end-to-end testing, but my... it just killed my, this thing, okay?

**[01:59:08] - [01:59:15]**

Dileep Karri: Okay, I'm working on a MacBook M1 Pro, not even MacBook Normal Pro. Even M1 Pro, it was killing it.

**[01:59:20] - [01:59:35]**

Dileep Karri: All right, I will take a few questions, just hold on for a second, right? Because what happened is, during the demo days, or, during a lot of sessions, people have been,

**[01:59:35] - [01:59:46]**

Dileep Karri: You know, asking me a lot of questions. I'll turn off the chat for some time, okay? I'll just let me turn off the chat. I'll take 5 minutes, and then I'll take you some of the questions.

**[01:59:46] - [02:00:05]**

Dileep Karri: Okay? So, what has happened is a lot of people were asking me that they have heard about, you know, okay, we have learned this from you, what next, what is it that you would help us do next? So, I'll take exactly 5 minutes to talk about it. See, I'm not going to pitch. We have enough bond.

**[02:00:05] - [02:00:16]**

Dileep Karri: to understand about pitch and everything. I'm not going to pitch it, I'll just inform, and I'll ask you to decide for yourself if you want to come up, because a lot of people don't know this.

**[02:00:16] - [02:00:27]**

Dileep Karri: Right? So, the, you know, we have been doing this program called Catalyst. I think some of you are in the session. Anybody from the Catalyst who are here?

**[02:00:28] - [02:00:32]**

Dileep Karri: Can you just say me, if you are in the catalyst? Yes.

**[02:00:32] - [02:00:41]**

Dileep Karri: Oh, nice! A lot of people are here from the Catalyst program. Awesome, awesome. Thank you, thank you, folks, for coming in.

**[02:00:42] - [02:00:46]**

Dileep Karri: Okay? So, what we have done is, we have,

**[02:00:46] - [02:01:10]**

Dileep Karri: So while, for each batch, we have taken few seats and, you know, opened up, because we were testing out the program, we were, you know, trying to figure out whether we

are doing a good job of the program, and thanks to the early adopters, I think we are getting there. A lot of work to do. So basically, the program, right, the genesis of the program came for the fact that

**[02:01:10] - [02:01:22]**

Dileep Karri: that, hey, you know, we know how to build products, we know AI, but what are the next steps? So, two things. One thing is, you need to deepen your skill

**[02:01:22] - [02:01:37]**

Dileep Karri: So that you build a system, and then you take the system to market. So what is this? How can you go deeper on the skills, build a system, and take it to market? What is the go-to market? What are the strategies to do that?

**[02:01:37] - [02:01:54]**

Dileep Karri: How do you build systems, some systems, how you can build so that you can give it to other clients, all of that part, okay? So we go deep into the skill, and then talk about a system to monetize and package that skill. That is what we have been, trying to do.

**[02:01:54] - [02:02:04]**

Dileep Karri: So, the... basically, what, the genesis had come from, you know, a lot of, people who were saying, okay, you know what, we know how to build.

**[02:02:05] - [02:02:06]**

Dileep Karri: We know how to troubleshoot.

**[02:02:06] - [02:02:25]**

Dileep Karri: but how can we go take it to the next level? How can we... more importantly, right, more than the knowledge, how can we have a community where we are building together and doing some stuff? That is what we wanted to build through this program. So I don't have a deck or anything, I just...

**[02:02:25] - [02:02:39]**

Dileep Karri: I'm openly sharing what it is, because I feel I have enough bond with all of you that I don't require a deck and tell you, hey, this is the storyline, this is this, this is that, etc. I can tell it to you as it is open.

**[02:02:40] - [02:02:45]**

Dileep Karri: So, basically, what we, did was.

**[02:02:45] - [02:03:08]**

Dileep Karri: Can we build a good, vibrant community where people are building stuff? By the way, it is not as hand-holding as how you have seen in the other programs that you have come through, right? You can, you know, we try to keep it... we will not do too much of hand-holding. We will give you the system, we will give you the environment, it's like a gym.

**[02:03:08] - [02:03:22]**

Dileep Karri: Where you come in, you go deeper in your craft, you build products, and you learn how you can take those products to market. But doing that entire hard work is up to you. We build the system, we build the environment for you.

**[02:03:22] - [02:03:35]**

Dileep Karri: That is exactly what we have been doing. So, the next cohort is starting at the end of this week, and then in another two and a half, three months, we have the other cohort which will start.

**[02:03:35] - [02:03:43]**

Dileep Karri: For this cohort, we might have just few seats, so if anybody wants, you can apply. For those

**[02:03:43] - [02:03:47]**

Dileep Karri: For the cohort that has recently been done, some other seeds, I think.

**[02:03:48] - [02:04:02]**

Dileep Karri: Five seats have already been taken. We are looking... doing the introducer of five seats, but we thought there might be some people from the older cohort, some people from our older programs, who might be interested in this.

**[02:04:02] - [02:04:10]**

Dileep Karri: So, that's why we are going to open it up. Before that, let me show you the curriculum. It's just a normal spreadsheet, no fancy stuff.

**[02:04:10] - [02:04:14]**

Dileep Karri: Let me... where is it? Okay, I didn't even get that also.

**[02:04:15] - [02:04:18]**

Dileep Karri: Let me open that, just give me a second.

**[02:04:27] - [02:04:45]**

Dileep Karri: So, the program, the name we are calling it, we are calling it actually the, you know, the catalyst program, because, this is the next level where you are being, like, a catalyst of transformation, that is the, overall idea. I'll just...

**[02:04:46] - [02:04:53]**

Dileep Karri: Share the... Drop the link on the chat so that you can understand what the program is about.

**[02:04:57] - [02:04:59]**

Dileep Karri: Okay? And,

**[02:05:00] - [02:05:15]**

Dileep Karri: Quickly, I'll go through the curriculum. I'm not going to go into too much detail, because I want to get back and answer a few of your questions. So, we have a base camp wherein we kind of, you know, check back and cover some of the stuff.

**[02:05:15] - [02:05:32]**

Dileep Karri: Basically, we revise some of the things that you have learned, then we go into problem solving with AI and outreach. How do you do that? Then we talk about AI employees that work for you, like, how do you build very good landing pages, how do you build prototypes, sales agent, RAG agent.

**[02:05:32] - [02:05:40]**

Dileep Karri: Right? Weekly business report generator, some other stuff. Then we go into advanced rags, context engineering, something like a voice agent.

**[02:05:40] - [02:06:02]**

Dileep Karri: Then we go into automation and agent integration, etc. Then how do you package and sell your AI agents? How do you create your first sellable package? How do you build a clean landing page, etc. Then we talk about basic UI UX design principles, something that you'll require. Then how do you make your product feel magic? How do you add smart features?

**[02:06:02] - [02:06:04]**

Dileep Karri: analytics and iteration, infra.

**[02:06:05] - [02:06:22]**

Dileep Karri: how do you publish your app? How do you think about pricing and revenue planning? How do you create lead magnets? What are the SOPs for delivery? Then we also do some deep sessions on cloud code. We go even deeper than what you have seen.

**[02:06:22] - [02:06:39]**

Dileep Karri: Okay, so you will see a lot more stuff on that. Of course, that one, we do the Slido, we do the Q&A, we do the officers part of it. These sprints are over and top of about that, so don't think that we are not going to stop this anytime, so every 2-3 weeks.

**[02:06:39] - [02:07:01]**

Dileep Karri: Either me or some of the mentors are going to come and do this, okay? If you are interested, you know, just book a Calendly link, you can talk to us and figure out if there is an alignment, and if you like, come on board. If not, no worries. We are still a community, we are still part of this. There is absolutely no compulsion at all.

**[02:07:01] - [02:07:05]**

Dileep Karri: You want, you can... Book your call, and you can talk to us.

**[02:07:05] - [02:07:30]**

Dileep Karri: If not, it is completely fine, completely okay, okay? We are still friends, okay? Just because you don't take the program or anything, it's not that we are enemies or anything, we are, we are friends, and we are continuing... we are going to do the sprints and master classes. By the way, if you have any ideas, do ping me on LinkedIn. I hope everybody has my LinkedIn, but in case, just in case.

**[02:07:36] - [02:07:39]**

Dileep Karri: Okay? So,

**[02:07:39] - [02:07:53]**

Dileep Karri: at least for AI Accelerator folks or anybody, I do respond to messages, not for everybody else. If you've got any questions about the program, how it works, the mechanics, and everything, you can talk

**[02:07:53] - [02:08:08]**

Dileep Karri: in the interview, we will clarify all of that. And, yeah, if you're interested, come on board. If not, we will continue these sprints and masterclasses. Would love to know. I know that this is a session which is the most advanced

**[02:08:08] - [02:08:10]**

Dileep Karri: I have gone, or maybe...

**[02:08:10] - [02:08:30]**

Dileep Karri: In the catalyst, we had gone a little more advanced. We had done some even more crazier stuff, but here, I thought we will go a little advanced and show you what it is. The idea behind these sessions is to kind of open up a new kind of things to show you what is possible, what is happening. We will continue this. You are part of the community.

**[02:08:30] - [02:08:50]**

Dileep Karri: Right? Plus, there are some more initiatives that we are planning. We would love to meet you in person, if possible. We will try to do some meetups, etc. Again, a lot of things in the planning stage. We will tell you once something happens, but for now, your sprints and master classes will continue.

**[02:08:50] - [02:08:55]**

Dileep Karri: Sprints will be more like multi-sessions, masterclass will be more like a singular sessions.

**[02:08:55] - [02:09:08]**

Dileep Karri: We will also get you some newer mentors who will not have seen in the program. Do give us the feedback, because if you give the feedback, we know that the mentor is good, and we will put it to your junior cohorts.

**[02:09:08] - [02:09:22]**

Dileep Karri: Okay, so that is the entire thing that we had wanted to do. Okay? One more minute, and I'll get into Q&A. I'm not going to put a Slido and everything. You can ask it in the chat. I will pick a few questions.

**[02:09:22] - [02:09:40]**

Dileep Karri: From there, what I feel are relevant, okay? And I will answer a few of those questions in the next 10 minutes, okay? We will have more sessions, and I hope you can go deeper and build this out for you. That is exactly what I want you all to do overall.

**[02:09:40] - [02:09:48]**

Dileep Karri: Okay? So, thank you folks, and now I think we can open up the questions. I'll open up to hosts and panelists.

**[02:09:48] - [02:10:01]**

Dileep Karri: So that if you still want to do that... By the way, questions are on the content, not on the cat risk program, okay? So, that questions, you talk to others, or you talk to this thing.

**[02:10:01] - [02:10:10]**

Dileep Karri: And figure it out, okay? I, as I said, 5 minutes, not more. I want to talk to you on the content that we have done so far on the Sprint.

**[02:10:10] - [02:10:11]**

Dileep Karri: Okay, there you go.

**[02:10:17] - [02:10:30]**

Dileep Karri: Okay, so I'll stop right now. I know people have posted some questions. I will stop, I will take a few, and then I'll again open it up, okay? I'll manage it that way. So, anti-gravity agent...

**[02:10:30] - [02:10:40]**

Dileep Karri: Yeah, so see, anti-gravity agent uses Gemini Pro, that also has the same problem. Any agent you go, it will kill your tokens like anything.

**[02:10:40] - [02:11:00]**

Dileep Karri: Okay, so even if you're on a Gemini Pro plan, only Codex is somewhat kind of helping out in, you know, giving extra tokens, and that is because OpenAI is now quite behind Anthropic, they want to catch up, and therefore, they are trying to give extra usage, extra tokens to kind of do that.

**[02:11:00] - [02:11:19]**

Dileep Karri: When you are working from a new code, you have seen this, but if you are trying to work with existing code, okay, if you're working with existing code, what you can do is, you can run one agent to go through your complete code, understand the architecture, understand a bunch of other things, you can figure out that.

**[02:11:19] - [02:11:32]**

Dileep Karri: then you can, you know, try to build your skill, your plan, etc. Okay? Midway projects are always going to be tricky, so you have to... it is going to take your tokens. In fact.

**[02:11:32] - [02:11:36]**

Dileep Karri: the best way I can think of is run parallel agents.

**[02:11:36] - [02:11:47]**

Dileep Karri: To kind of read everything. I know I have not covered agents in detail, maybe in future or some other time, we will go deeper into agents, but that is exactly how it is.

**[02:11:48] - [02:11:55]**

Dileep Karri: So, anytime you want to add features, you can add the different features, etc, right?

**[02:11:57] - [02:12:12]**

Dileep Karri: So, a lot of times, what I see is on the plan and everything, some people are asking questions on plan and memory. Check the recording. I have addressed that. What is plan, what is memory? Go through it. Plan is the plan built by the agent.

**[02:12:13] - [02:12:14]**

Dileep Karri: Okay?

**[02:12:16] - [02:12:27]**

Dileep Karri: So, if you want to get started, I think PM Skills is a good way to get started. Once you get your hands dirty, then come to Superpowers. That is what I would do this.

**[02:12:30] - [02:12:41]**

Dileep Karri: Okay? Nate and obsolete, okay? Everyone has its place, folks. Don't think it is going to be obsolete, this, that, and all. It is not exactly like that, you know?

**[02:12:41] - [02:12:46]**

Dileep Karri: It has its place, but yes, Claude Code is doing a lot of stuff.

**[02:12:47] - [02:12:59]**

Dileep Karri: Skills, couldn't you have Claude review the skill website and have the skill rebuilt by Claude? I could do that, but I prefer to kind of search for the skills I want and actually do this.

**[02:13:01] - [02:13:07]**

Dileep Karri: So, the scale, okay, good, now I'm going to open up for a few more questions.

**[02:13:18] - [02:13:21]**

Dileep Karri: Okay? Few more questions, then,

**[02:13:21] - [02:13:40]**

Dileep Karri: Any future sessions on spec-driven development or anything? So, spec-driven development, right? Today, what I've done is some kind of a spec-driven development, it's a software engineering-driven process. I don't think you need a separate session on spec-driven development. This is good, you can pick that spec-driven development yourself.

**[02:13:40] - [02:13:52]**

Dileep Karri: To publish on a server, very simple, you push it to GitHub. From GitHub, it is a one-click install to push it on Netlify or Versal. Very straightforward, just Google, you can kind of do that.

**[02:13:53] - [02:14:08]**

Dileep Karri: So, can you use Gamma4 using local model and clot code? I think you can do that, but know that your outputs are not going to be so great, it is going to be a little different, okay, just be cognizant of that.

**[02:14:08] - [02:14:16]**

Dileep Karri: So what is the difference between building like this and building with lovable? See, again, both are same, but lovable...

**[02:14:16] - [02:14:27]**

Dileep Karri: you have much more power in here, okay? So if you see the sessions, right, the way I orchestrated skills, the way I kind of brought it all together, it is much more different.

**[02:14:27] - [02:14:38]**

Dileep Karri: Mem Palace, I don't know what Mem Palace is, maybe it is a different thing, I have not checked it, maybe I'll check it out, but I am happy with Claude Mem, to be very frank.

**[02:14:40] - [02:14:56]**

Dileep Karri: So, thoughts on open claw, paperclip versus cloud code? Again, different tool stack, different purpose. I will not usually compare tools. Each has its purpose. OpenClaw is like an always-on-agent Cloud Code is also tried to do that.

**[02:14:57] - [02:15:05]**

Dileep Karri: Picking up skills from skills.sh, is it secure? So, you'll have to look at if the skills are good and they are not.

**[02:15:05] - [02:15:18]**

Dileep Karri: you know, kind of trying to be malicious, so that is something that you'll have to do. What is the follow-on coursework? Great question. This is no longer coursework. This is learning for life.

**[02:15:18] - [02:15:29]**

Dileep Karri: You will have sprints and master classes like this. Go... you will have sessions like this, you will learn some new concepts, okay? Continue building, continue learning.

**[02:15:29] - [02:15:30]**

Dileep Karri: Okay?

**[02:15:31] - [02:15:47]**

Dileep Karri: Is what we are doing scalable? We had issues with the developer. To some extent, yes, it is good for a prototype. Don't think that you can build and scale systems for millions of users just by this.

**[02:15:48] - [02:15:51]**

Dileep Karri: You need some other systems overall.

**[02:15:52] - [02:15:53]**

Dileep Karri: Okay?

**[02:15:54] - [02:16:06]**

Dileep Karri: For security checks, if end-to-end or any other skill, will Claude Code be able to solve it themselves, or do... how do we solve it? So, if you're looking at that.

**[02:16:06] - [02:16:24]**

Dileep Karri: So there are... you will... so there... if you're not able to solve with Cloud Code, there is another thing called SemGrip, S-C-M-G-R-E-P. It's a tool with a subscription with its own MCP server that also does the security thing. In fact, in Lovable, the VIP security is done by SemGrip.

**[02:16:26] - [02:16:36]**

Dileep Karri: See, CloudMem kind of is a boost to memory.md, okay? But memory.md, you control what memory needs to be...

**[02:16:36] - [02:16:37]**

Dileep Karri: Mmm...

**[02:16:37] - [02:16:50]**

Dileep Karri: It decides by itself what memory needs to be logged. One case, you have to be cognizant and keep logging the memory. In the CloudMem case, it will do it by itself, you don't have to worry about it.

**[02:16:50] - [02:17:00]**

Dileep Karri: Okay, last set of questions I'm going to take. Rest of it, figure it out by yourselves. We have... I have given you the complete framework. It's now up to you to explore and go deeper.

**[02:17:12] - [02:17:24]**

Dileep Karri: Okay, there are multiple folders, how do we go about that? You don't have to worry about multiple folders, Cloud Code will take care of that. If you're beginning, you don't have to do those multiple folders.

**[02:17:25] - [02:17:35]**

Dileep Karri: Okay, somebody asked the question, how do you do your research? You show so many resources, can you share your sources? There is absolutely no one-place resource.

**[02:17:35] - [02:17:53]**

Dileep Karri: It is pure grit and reading. That means every day I spend 2 to 3 hours just exploring reading. Out of 100 things I read, I maybe share 10 of those, which I feel are helpful. 90 of them, either I'm not sure, I'm figuring it out.

**[02:17:53] - [02:17:56]**

Dileep Karri: I'm not sure what to do with them yet, etc.

**[02:17:57] - [02:18:11]**

Dileep Karri: Okay? Simple research. Again, same thing. Twitter, link... not LinkedIn, actually, Twitter. I do read a lot of newsletters. I do that. Then Twitter and newsletters, I think, are the main places.

**[02:18:13] - [02:18:18]**

Dileep Karri: Okay, open thought, again, somebody was asked about plan and memory.

**[02:18:18] - [02:18:21]**

Dileep Karri: Check the recording. I have talked about that.

**[02:18:22] - [02:18:33]**

Dileep Karri: How can skills be useful in the existing product? I already addressed that. Skills, even in an existing project, you can ask this one skill to read your code and understand.

**[02:18:34] - [02:18:37]**

Dileep Karri: And other skills to, picket forward from there.

**[02:18:42] - [02:18:50]**

Dileep Karri: So, Cloud Code plugin, and this, not much difference. A terminal is more lightweight and powerful.

**[02:18:50] - [02:18:57]**

Dileep Karri: Okay, I can use 3-4 terminals and do things in parallel, but plug in 2 plugins, it might break my system.

**[02:19:01] - [02:19:25]**

Dileep Karri: Okay? How to save tokens, I think I've addressed already. One is ClaudeMem, to kind of save your context. Second thing is clarity, how you can get clarity on what you're trying to build. There are some people who said, you can save tokens like this, you can save tokens like that, etc, but I feel Clarity is the best token saver, and plus, you should also think in terms of this. Don't think in terms of.

**[02:19:25] - [02:19:36]**

Dileep Karri: I am saving some pure tokens. Don't think in that way, think in terms of, you know, I am consuming a few tokens here so that I can build a very good product.

**[02:19:36] - [02:19:55]**

Dileep Karri: So that I don't have my breaking of the product. You see, today when I built, in a single shot, I was able to demonstrate, right? It was a complex app, by the way. TLDR was coming in, I was sketching and getting the thing, right? Now I will kind of build it further, make it refined, and keep pushing it to GitHub.

**[02:19:56] - [02:20:10]**

Dileep Karri: Okay? For folks who are asking any skill for Python coding, you will not have Python coding skills, but you will have Contact 7, which has the best coding practices and the best documentation for building your app.

**[02:20:10] - [02:20:14]**

Dileep Karri: Alright, that's it, folks, for the questions today.

**[02:20:15] - [02:20:28]**

Dileep Karri: Thanks, thanks a lot, folks. Really love teaching, at least the alumni of our programs. You know, it, really, comes through that.

**[02:20:30] - [02:20:37]**

Dileep Karri: Okay, yeah, one more thing. People were asking, how do I see the tokens? Let me show that also.

**[02:20:38] - [02:20:39]**

Dileep Karri: Okay.

**[02:20:56] - [02:21:03]**

Dileep Karri: So, for the places, right, there is one thing called Claude Board.

**[02:21:03] - [02:21:04]**

Dileep Karri: Tips and tricks.

**[02:21:05] - [02:21:07]**

Dileep Karri: Okay, this is one more GitHub repo.

**[02:21:07] - [02:21:15]**

Dileep Karri: So, there are 45 cloud code tips and tricks, and one of those tips and tricks are... Where is it?

**[02:21:18] - [02:21:28]**

Dileep Karri: Yeah, the first one, customize your status line, okay? I use this customize your status line to kind of figure out how many tokens I'm using.

**[02:21:28] - [02:21:35]**

Dileep Karri: Little advanced stuff, okay? So, I will put this up.

**[02:21:36] - [02:21:48]**

Dileep Karri: Okay, so this Claude Code tips, there are a lot of tips which are there. It is pretty scary, okay? If you feel not overwhelmed, then only do that. Otherwise, it's going to be a little challenging.

**[02:21:49] - [02:21:50]**

Dileep Karri: Okay?

**[02:21:58] - [02:22:00]**

Dileep Karri: Got it.

**[02:22:00] - [02:22:03]**

Dileep Karri: So, folks, thanks, thanks a lot.

**[02:22:03] - [02:22:08]**

Dileep Karri: Don't worry, for people who have not been able to access your...

**[02:22:26] - [02:22:27]**

Dileep Karri: Oh, God.

**[02:22:29] - [02:22:33]**

Dileep Karri: You know?

**[02:22:33] - [02:22:38]**

Kartik Outskill: Okay, Dilip, I'm sorry for just barging in. Folks, I have launched the Seaside...
